THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOLUME VII. SACRAMENTO, CALIFORNIA, FRIDAY MORNING, JANUARY 16, 1857. NUMBER 1.

CALIFORNIA STATE LIBRARY

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.

By WARREN & CO.

PUBLISHED EVERY FRIDAY MORNING,
Simultaneously at Sacramento and San Francisco.

Offices—*on Fourth street, between J and K, Sacramento,*
—No. 150 Washington street (up stairs), San Francisco.

TERMS.—*Five* dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.

☞ Advertisements in this journal will have a circulation and notice unequaled.

☞ **Advertisements and Subscriptions must be paid for in Advance.**

The Earth Prepared for Man.

We have received the annexed Letter from our correspondent as a "Criticism upon the Theory" advanced by Dr. C. F. Winslow, in the learned Address to which the writer alludes. As we have published the Address so widely, we cheerfully publish the Criticism, confident that a discussion of the subject matter is one of deep interest, and one worthy a discussion among scientific minds. Dr. Winslow is East at the present time, and as we mail him our Journal, it will reach him, and we have no doubt will draw from him a prompt response.

Most cheerfully do we offer our columns for any scientific discussion upon matters that shall tend to make our Earth more fitted to be the abode of the "intellectual races;" we should rejoice most especially if California should offer to the world a harvest of mind corresponding to the growth of the matter upon the soil which is the subject of discussion:

—

Editors Farmer: My attention has been called to an Address, which appeared in your Journal of the 17th ult., purporting to have been delivered by request before the Legislature in February, 1854, entitled "The preparation of the Earth for the Intellectual Races, by Doct. C.F. Winslow."

As a composition it is an admirable production. The language with which he has clothed his ideas, is most forcibly and eloquently arranged, and contributes greatly to the interest of the reader. The subject presents to the reflecting mind a field of boundless research, replete with the loftiest aspirations of the human mind, inspiring the intellectual reader with sentiments of delight, in the contemplation of a theme so full of grandeur and sublimity. In thus obtruding upon your columns, permit me to call the attention of your readers to the position assumed by the Doctor in his theory of the organization of our earth. In the introduction of the subject, he says: "Some of the most striking considerations you may observe to be original, and the application of the whole range of thought, many persons may imagine bold and novel." And he may have added, likewise with great propriety, chaotic. In order to pacify the belligerent attitude of antagonistic theories, in the formation of the earth, he has sought to combine, in the construction of his original, bold, and noble system, the advantages conceived by the advocates of both the Aqueous, or Electrical, and that of the Igneous theories. He says: "As salts exist in the ocean, dissolved and invisible, in the original condition of things, the matter composing this earth, existed as a solution in water, and was diffused throughout space. As the salts of the ocean crystalize by condensation and assume specified shapes, so primordial atoms, subjected to forces, instituted by Supreme wisdom, assumed solidity, and became planetary spheres." Thus far he has set out, upon the broad and expansive theories, advanced by many of the more intellectual philosophers of the present day. Not content, however, to pursue his investigations along the lucid channels of this grand and comprehensive system, through which the student is borne with gentle breezes to the boundless storehouses of nature's great laboratory, apparently with a view to astound his hearers, he abruptly changes the harmony of the elementary forces of Creation, by the introduction of a grand and magnificent conflagration of the whole structure. He says: "The accumulation of elementary masses of condensed matter, was attended with galvanic results so potent, that complete fusion ensued to the earth; and what existed at first as molecules dissolved in ether, and afterwards as solid masses of varying metallic and mineral composition, or as gas and fluid, became, when ultimately mingled together, a glowing globe of compound and liquid rock, 8000 miles thick, circling around the sun." What a magnificent spectacle the poetical imagination of the Doctor has wrought in presenting to the minds of his hearers, that solid globe, glowing with incandescent heat, rolling in its orbit around the sun! Doubtless the constellations of the Universe were veiled in total darkness, by the brilliancy of that epoch; the originality, boldness and novelty of which, I presume, there will be none to dispute. It is difficult to treat a stupid blunder, with that degree of serious consideration which a subject like this, so imperatively demands. It will be observed, that having first set in motion the material atoms, of which our world is constituted, under the efficient force of gravitation or attraction, or in his own words, condensation (which signify the same, for these words have all one meaning, and are applied to one and the same principle), he is pleased to subject the whole mass to a state of fusion. What difficulties he sought to avoid in the investigation of his subject, in the pursuit of the theory upon which he first set out (which was in good working order, so far, that under its efficient influence the condensation of our globe had become so far advanced that the crystalization of various matter had already assumed the character of rocky and solid substance), by this altogether unaccountable presumption, he has not disclosed. Whatever they were, they certainly could not have presented a more formidable character than is found to confront him in his new position. On what principles, or by what laws, can he drive, in its circle around the sun, a globe of liquid or molten rock? He has destroyed the force of gravitation or attraction—(the force to which the earth is, and was indebted, to enable it to perform its circuit around the sun)—by the introduction of that of repulsion—extreme, mad, unbridled repulsion—which would scatter into infinitesimal fragments the liquid globe ere it had revolved on its axis. If it were possible to subject our globe to a state of liquid heat, it would lose its orbit, and it would cease to be a globe; for the repulsive force of that incandescent heat of which he speaks, would separate its atoms into infinite space, where they would lose the identity of their prior organization in subjection to the controlling influences of other planetary spheres, into which they would emerge. Thus would terminate the existence, not only of our own great and beautiful world, but likewise that of the Doctor's most wonderful structure, would cease to exist.

In the force of attraction, regulated and held in check by the lesser force of repulsion, do we discover the harmonious workings of nature, and learn the hidden mysteries of creation. If further evidence were necessary to demonstrate the absurdity of the Doctor's position, it is to be found in the following declaration: He says, "and what existed at first as molecules, dissolved in ether, and afterwards as solid masses of varying metallic and mineral composition, or as gas and fluid, became, when ultimately mingled together, a glowing globe of compound and liquid rock." Every schoolboy, who is acquainted with the rudiments of chemistry only, would at once discard the presumption that gas, or fluids, could by any possibility commingle with, or be retained by a mass of liquid molten rock, glowing with incandescent heat "Glowing incandescent" signify a white heat, the intensity of which will not only fuse, but it will decompose the constituents of all the metals with which we are acquainted. A diamond yields up a sacrifice to the stern mandates of incandescent heat. Gases and fluids, and many of the more fusible metals, would have been driven off into unknown space, far beyond the original orbit of the earth, at a temperature very many degrees below that of a white heat; a degree which it would most undoubtedly require, in order to subject granite to a state of fusion. Nature seeks not an agency in liquid glowing heat, in order to create worlds, nor yet to lay even the foundations, or rib work, of her magnificent structures. The formation of granite rock, like unto all other rock, minerals and metals, is the result of one and the same law, by which the Great Architect of Nature perfects all his works.

I am at a loss to inference the source from which the Doctor derived the conception of this anomalous theory, the character of which it is difficult to unravel. Laplace's Nebular Theory, and Macintosh's Electrical Theory, alloyed with Milton's Paradise Lost, resemble in some features this imaginary philosophy.

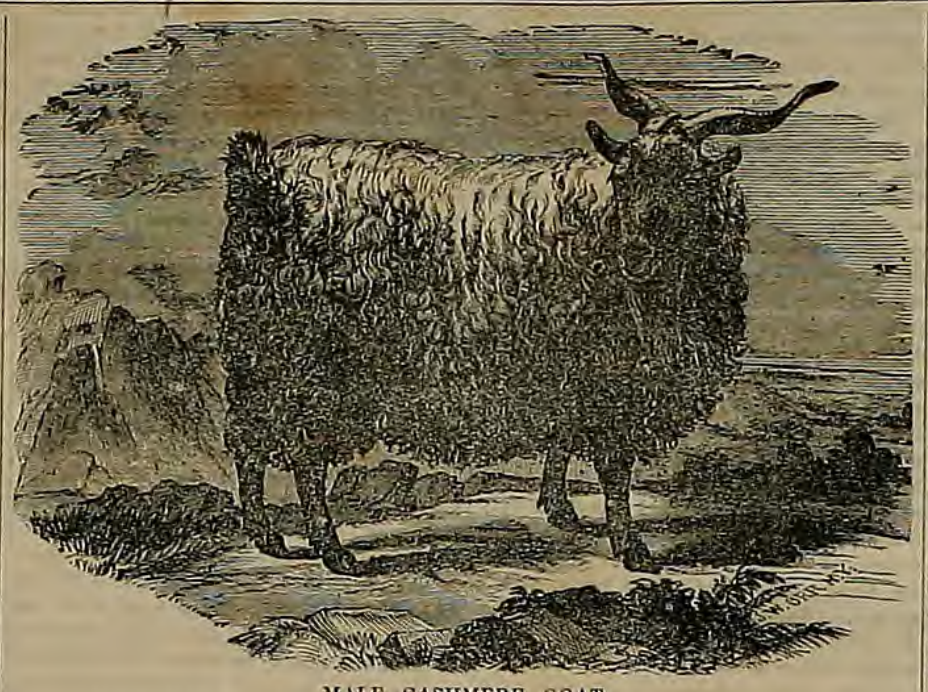
There are other errors in the Address, which would require too much space in a newspaper article to consider. Enough I think, has been shown, to convince every intelligent mind of the absurdity of the Doctor's Electro, Aqua, Igneous theory of the formation of our world.

And with the highest considerations, I am your most obedient servant,

E. F. Brundage.

January 6th, 1857.

More Antiquarian Discoveries.—The Placer Herald says: Some miners working upon the ranch of Mr. Hawes, about four miles from the Indian Valley House, in this country, found, some four feet under ground, quite a quantity of bones and some thirty fire-bricks of different patterns, marked with letters and figures of modern style. Pickwickian antiquarians hereabouts have built upon this a splendid theory, by which the imagination is carried into the dark vistas of the past; but we apprehend some unfortunate forty-niner could explain all about it.



MALE CASHMERE GOAT.

Live weight 155 lbs; weight of fleece 7 lbs. The property of Richard Peters, of Atlanta, Ga.

We present herewith cuts made by J. W. Orr, of a male and female Cashmere Goat, owned by Richard Peters, of Atlanta, Georgia. These animals were introduced here from the East in 1849, by Dr. J. B. Davis, of S. C., from whom they were mostly purchased by Mr. Peters, in 1853. His flock now consists of twenty-five head. A few animals are owned by other gentlemen, but this is the largest collection. How far they may become a useful addition to the stock of the country, is not yet fully determined; those who have given the most attention to the subject appear to cherish high hopes of them.

FEMALE CASHMERE GOAT.

Live weight, 102 lbs; weight of yearly fleece 4½ lbs. The property of Richard Peters, of Atlanta, Ga.

Mr. Peters says: "That they are not the Thibet Shawl Goat, is proved by their total dissimilarity to a specimen of that breed in possession of the subscriber; the latter variety having only an under-coating of a few ounces—which portion of its fleece is alone valuable. Works on Natural sciences show that they are not the common Angora Goat, of the Province of that name in Asiatic Turkey, as that animal is of varied color, with a fleece of indifferent value. They have become known as "Cashmere Goats," from the pure white color and fineness of their fleeces, and their undoubted Eastern origin.

The fleeces of the matured bucks weigh from six to seven pounds. Ewes yield from three to four pounds. The flesh of the crosses is superior to most mutton, tender and delicious, making them a desirable acquisition to our food-producing animals. The ease with which they are kept, living as they do on weeds, briars, browse, and other coarse herbage, fits them for many portions of our country where sheep could not be sustained to advantage; while their ability and disposition to defend themselves from the attacks of dogs, evidence a value peculiar to this race of animals. They are free from all diseases to which sheep are liable, hardy and prolific; and experience has proven that they readily adapt themselves to all portions of the United States."

The Bees.

The recent astonishing account of Bees, given by Mr. W. L. Briggs, while it shows an increased knowledge of their habits should also call into action a series of experiments that shall secure to the apiarist not only a rapid increase of his stock of Bees, but also secure a strong and healthy stock.

The remarkable success of Mr. Briggs would lead us to inquire of him as to his success in these particulars: If a strong hive shall give off two, three, four or five swarms in a season, are these swarms as strong, healthy and as productive of honey as when only one or two swarms are sent off from a hive? We would also know the result of so large an increase of swarms; and more, if the apiarist can, by making new Queens, make a still further division of swarms? We would yet inquire what have been, what will be the result? For if by these subdivisions, if by increasing the number of swarms we do not also increase the products, then it is all a waste of time and labor.

The grand object of an apiarist should be, not only to increase the number of his swarms, whereby his product of honey should also be increased, but also to know that his swarms are all strong in numbers, healthy and free from all symptoms of disease, that they will be enabled to reward those who have care of them by large returns of honey, and at the same time to reserve to themselves a stock for their winter use, and for all contingences of the seasons.

While we take pleasure in making known the success of Mr. Briggs, in his recent experiments on Bees, we have waited to see if others would not ask the questions we have now propounded. To us it seems clear that while we aim at a better knowledge of this little creature, the Bee, the most perfect and beautiful type of industry, we should aim to follow their nature, and to come to their aid; for if the mere love of gain shall be our object, if the object shall only be to increase the number of swarms, as a matter of gain in dollars and cents, then surely we shall lose sight of the higher law of nature, and the consequence will be loss only, for a too rapid increase will weaken the swarms and unfit them for labor, which must necessarily end in a loss of the hive.

Most earnestly do we urge upon all who are interested in the Bees to give this subject their serious attention, and communicate with us freely, for by so doing they will confer a benefit upon the public, which will in return act upon themselves.

Fremont's Mariposa Claim—Taxes Due.—The Mariposa Gazette says, the assessment this year (1856) of Col. Fremont's claim is $1,000,000, the taxes upon which are $17,000—a round sum to be paid yearly upon property which, as yet, has yielded nothing to the proprietors. The $8,000 tax due this county from this claim in 1855 being paid, together with the taxes as assessed of 1856, will, after paying the expenses of this county the present year, place us out of debt and leave a balance in the Treasury. The tax must soon be paid by Col. Fremont, or by the sale of the property for this purpose.

Prune your Fruit Trees.

Now is the time to prune your fruit trees, vines, roses, shrubs, &c., and to form your hedges. Pruning is a science. We read, "just as the twig is bent the tree's inclined." We know, *as a tree is pruned*, so will be the beauty of its form, the vigor and healthiness of its growth, and the quality and quantity of its fruit, or the perfection and beauty of its flowers.

The vine can be pruned in several ways, the system to be adopted depends upon the place the vine occupies—whether in the vineyard, on the trellis, or as an ornament, short pruning we advocate always. But 'tis of fruit trees we intend more particularly to write.

When we visit orchards we do not find one person in twenty that understands the true science of pruning. In many orchards we have found trees pruned up as standard trees some six and eight feet from the ground before they branch. In this country nothing can be more fatal to success. Fruit trees should branch low; the tree requires this, for two important reasons: 1st, That these branches may stay the tree, and support it against the strong winds that prevail; and, 2d, that these branches may also shade the ground in dry weather.

The formation of the tree will then be natural, and the science of pruning will then come to form the tree and aid it in the fruiting process, by taking off the useless branches, and shortening others so as to give vigor to the fruit buds.

Fruit trees make such very bold growth that it is necessary to *shorten in* every year; this system is the best, and all that is required is to have an eye to forming a round head, taking care to have the branches form in a handsome shape, something like the *cone of a pine apple of a large size*. We notice with pleasure an increased attention to the pruning of trees, and while at San José, we were exceedingly gratified in a visit to the fruit orchard of R. G. Moody, Esq. It was a small orchard of some one hundred and fifty trees, but it was a gem of an orchard. Every tree was No. 1, and the beautiful form of the trees, their clean, shining bark, their bold buds standing out on the branches, gave evidence of care and attention of the right character. In all that we have seen in California among orchards we have seen no one example of complete, finished pruning that would excel this orchard. In a conversation with the proprietor we were satisfied he understood the science of nature and the claim the tree had upon him for his care and attention, and the proprietor also knew (for his practice evinced it) that the tree would pay him well for all the attention he gave it. We give all due honor to Mr. Moody, and hope his neighbors, far and near, will visit his orchard and copy his example.

The Fruit Orchard and Nursery.—Go among the bearing fruit trees, and examine the trunk and limbs; take out the diseased wood; scrape off the rough bark of the apple and pear, and smear their trunks with soft soap; remove the gum around the base of the peach tree, and from the spout of a tea kettle pour boiling water into the holes of the worms in the root; this will kill the worm without injury to the tree; shorten the long branches of the peach tree; lighten the soil around all fruit trees with a fork, that the rootlets may not be cut.

If you look for profit from an orchard, cultivate the orchard for its fruit, and not for cotton, peas or potatoes. Young fruit trees may now be started from seeds. Choice fruit trees may now be grafted into seedling roots, and may be grafted on the limbs or trunk of old healthy trees. All amateur cultivators, and farmers, should have a stock of seedlings on hand, that they may graft choice varieties upon. Grafting is a very simple process, and may be performed by children and servants with success, after a few hours instruction.—[Soil of the South.

We select the above as peculiarly applicable at the present time, as work that should be done now.

Readings of the Poets.—Several interesting soirees have recently been held in San Francisco, both in public and in private, which have done much to create a taste for social and intellectual culture, which bespeaks a good future for California. It was our privilege to be present and enjoy the intellectual treat offered to a few friends at the Rassette House, and afterwards to be present at Musical Hall and hear the readings by Mrs. E. Lesdernier. The best proof of their excellence and beauty was given by the character and attention of the audience. Rarely do we witness one so large and select as the audience which listened to the last named readings. There was a graceful and easy manner presented by the reader, a perfect modulation of the voice, an easy intonation, which evinced a knowledge of the author. The lady was in costume dress in the readings of Longfellow's Hiawatha, and difficult as was this poem, it was most admirably personified. We trust our citizens, wherever this lady shall go, will improve the opportunity of hearing so accomplished an artiste.

Rassette.—This hotel is rapidly filling up. Many passengers by the Golden Gate took lodging at the Rassette. G. W. Grannis, Esq., so favorably known at the International, is there.

REJECTED ESSAY.

On the Tule Lands of California.

"Fas est ab-haste doceri." (VIRGIL.

Who that has ever been in "merry-England," and has traveled over the length and breadth of that pleasant land, or that has visited the fertile countries of the Netherlands, and seen what industry has there accomplished, in reclaiming from the dominions of Neptune some of their most productive soils, but must at once perceive the immense treasure which California possesses in her Tule swamps, and the comparative ease with which those swamps may be brought under cultivation? I despise, as much as ever Horace did, the "*servile genus imatorum*," those mere copyists who have not a grain of originality in their composition, but as I have been in those countries, and have gained information from witnessing their labors, it is but honest and right that I should acknowledge the debt of gratitude which I owe them, and seriously recommend to others who are my friends, to follow their example.

There was once a time, when the dominions of England—that giant power which now

"Bestrides this narrow world like a Colossus,"

or, if I may be allowed to travestie the fable of the ancients of Briarius with his hundred hands, like a huge centipede, with one foot in her island home, and another on every shore, and exchanging her manufactured goods for the raw productions of every country on earth—There was a time when those dominions were confined to the southern portion of the island, and when a great proportion of her richest soils were sedgy swamps, where the sea and her lazy rivers contended for the mastery. But the active hand of perseverance mastered them both, and confined them within narrower limits, and changed those rushy bottoms into grassy fields, and covered them with golden grain. Nor was this praiseworthy object deferred, till the necessities of the people compelled them to reclaim their bogs, for the purpose of eking out a scanty provision for the increasing inhabitants, nor till Mammon had found out their value, and discovered that they might afford a profitable investment for his superfluous capital. There have always been some good men and true, even in the darkest times, who are actuated by other than merely selfish motives, who believe that they cannot be better employed than in contributing to the comfort and advancement of their fellow mortals. Long, long ago, when learning had taken refuge in the monasteries, and only existed within their sacred walls, the holy abbots directed the attention of their tenant farmers to this important object, and aided them with money and counsel, to enable them to accomplish it.

In contending in peaceful rivalry with England, we have no mean opponent to deal with; but who, that has the heart and spirit of a man, does not feel his courage rise, and his soul animated in consequence, with

"Such joy, as warriors feel,
O'er foemen worthy of their steel?"

There are none of the reclaimed swamps in England, which the public generally have had a better opportunity of seeing frequently, than the Essex Marshes; which extend from the outskirts of London a long way down the river. I recollect, some nine or ten years ago, accompanying my friend Mr. Elliot, one afternoon, for the purpose of examing those overgreen pastures, whose dark emerald hues make them so conspicuos, and so rivet the attention of farmers. They comprise without exception the richest pasturage I have ever seen. Of these lands Mr. Elliot, who was a cattle salesman in Smithfield Market, then rented 160 acres, for which, with an elegant house and its accompaniments, built as a residence by the late Lord Holland, he paid the moderate yearly rent of twelve hundred and eighty pounds sterling. And for such land, and so situated (within six miles of the Bank), even Mr. Elliot himself admitted it was a moderate rent. But Elliot was a magnanimous fellow, and an honest descendant of those notorious freebooters and cattle-lifters, so renowned in border song and story, who

With the Armstrongs did convene,
And were a gallant company."

He had been "a laird" in Scotland, but had sold his patrimony, and come up to London for the purpose of dealing in cattle, for which, doubtless, he felt a sort of hereditary propensity, but which the altered times made it necessary to follow in "the honest way of trade."

I stayed at my friend's house a day or two, and during that time had an ample opportunity of getting perfectly acquainted with the simple way, in which the so-called "marshes" are managed. At one time they had been partially covered at high-water. The arms of the old sloughs still remain, and supply, by turns, the place of veins and arteries, in conducting in and off the water; for no double system of catch-drain irrigation is there practiced. This simple plan is not only cheaper, but for tillage or pasturage the only one that is suitable. But let me describe these marshes as they are, and what has been done to make them so valuable.

Close by the edge of the river an embankment about seven feet high has been thrown up, with a ditch inside, from the earth of which the embankment, doubtless, has been chiefly constructed. This embankment, as it is washed by the tide in the river at high water, presents a considerable slope on the side next the river, and has consequently a much greater base than would be necessary with us, where the still water, from which we would require to protect ourselves, would not require a defense of so great strength, nor one which would cost so much in erecting. There, every three or four days fresh water is admitted from the river at high water, to supply the place of that which is allowed to remain for such length of time in the arms of the old sloughs, which form a sort of natural channels, by means of which, as I stated, the marshes are irrigated. Into these natural ditches the water is taken, till they are filled within about eighteen inches of the surface. They form a perfect labyrinth and network; and no stranger could possibly thread his way through them without a guide. The reclaiming of swamp land in this way, therefore, however suitable for pasture lands, would not be sufficient for those intended for tillage. In which case it would be necessary to cut new ditches for a similar purpose, and fill up the old channels with the earth thence taken. There is another circumstance besides, which would make the reclamation of our Tule swamps attended with considerable additional expense. There, the natural rise and fall of the river, from the influx and efflux of the tides, renders any apparatus for raising water unnecessary. Here, we would be obliged to use, generally, steam or other power to effect the same purpose.

The reason which induces me to refer especialty to the management of the Essex Marshes is, that they are irrigated systematically, a thing which ought to be done with our Tulé swamps; as, otherwise, one-half of their productive powers would remain in abeyance. The polders in the Netherlands, so far as they have come under my own observation, are made to subserve the purpose of pasture lands, by being only partially drained by navigable canals, and ditches leading at great intervals into those canals. We want our swamp lands for cultivation; and every farmer knows that land which is imperfectly drained is not well adapted for that purpose. Still it is better to have land in a half-drained condition, under the continued heat and drought of California summers, than to have it too dry. As an evidence of this, the lands of "The Monte," near Los Angeles, which once were so fertile, have, I am told, by draining been very much deteriorated. We want to combine irrigation with draining; and in our case, no better system can be adopted, than that which is followed in the instance which I have referred to, modified so as to accommodate it to our altered circumstances.

Before attempting to describe any method, by which the cultivation of swamp lands may be effected, I wish to say a few words in regard to the expense, which every one knows must depend on circumstances, which there is no possibility of ascertaining previously; including as they do the size of the embankments wanted, and the comparative difficulty of constructing them. To use the words of Mr. Blackie, in a prize essay furnished by him on the similar topic of reclaiming lands from the sea for the Highland Society of Scotland: "It would be an Herculean task, to attempt to lay down rules, or give directions for raising the requisite structures in every situation. So many local impediments occur, so many unlooked for obstacles must be surmounted, and there are always so many circumstances to be attended to, and provided for, that much must ever depend on the ability of the director." But there is one rule of universal application, because it is mathematically correct, which is apparent to every one, that the greater the extent of land brought under cultivation, the less in proportion will be the expense; as by embanking a whole tract of country along a lake or river at once, the least possible length of embankment is wanted, while a small portion of land would require to be embanked all round. Thus, the expense of securing such lands only increases, in proportion to the length of the embankment required to guard against the rise of the river or lake, while the extent of country embanked is in geometrical proportion. It would be well, therefore, that such operations should be conducted by companies, and inducements ought, under certain limitations, to be held out to those who are willing to form a connection for such an object.

A company formed for such a purpose must be aware that such labors would prove highly remunerative, from the ease with which a large extent of valuable land may be reclaimed, and brought under cultivation. The principal objects in most cases would be, to select some suitable tract of land, extending back for a considerable distance, and to have an embankment, of sufficient hight and strength, erected against those places, from which the lands are liable to be overflowed—let us suppose, by way of example, 7 feet high, with 21 feet of base, and 7 feet broad at the top. This would allow both sides to have their slopes at an angle of 45°. Inside this embankment, but not too near it, let a ditch be cut, about 6 feet deep, and sufficiently wide to furnish the greater portion of the material for the embankment. (A small portion may generally be taken from the outside, without doing any injury.) Great care must be taken in having this embankment firmly and compactly built; and perhaps no better system could be adopted, than to work in with the mud, as excavated from the ditch, a quantity of the tules, reeds, and rushes, which grow in the swamp, thus forming the embankment into a regular mud wall. To do this the more efficiently, abundance of water should be pumped on the wall when building, and oxen used for treading, and properly mixing the materials together. The propriety of some such system will be the more apparent, when it is considered that the embankment has to be water-tight, and every one knows that a small leak, during the time the lands would naturally be subject to overflow, might soon make a large breach, which it might be impossible to stop for several months.

Having properly secured the lands to be reclaimed by an embankment, with a large canal inside, capable of carrying off leisurely their drainage, and the water used for irrigation, we have next to take into account, that, to render those lands susceptible of yielding the greatest possible produce, they have to be both drained and irrigated. As in the case of the Essex Marshes, this double purpose may be effected (with a few additional adjuncts) by one system of drains. But in our case we have two things to do, one of which in that instance was not wanted at all, and the other, it there required but little trouble to effect. We require to have our drains made artificially at regular distances, so that the land may admit of easy cultivation; and in most instances we would have to use a regular power, for the purpose of pumping in and out water.

As the susceptibility of such lands being made more than usually productive depends, in a great measure, on their being properly irrigated, such drains ought not to be too far apart, and, as in the instance referred to, the water should be brought, as a general rule, which however the circumstances of different cases would modify, to within about eighteen inches of the surface. These drains it would be better not to have too small, as the object can be better accomplished, where there is a considerable body of water collected. I shall, therefore, suppose by way of example, that they have been dug 4 feet deep, 6 feet wide at the surface, and 4 feet at the bottom; and that the land reclaimed is, by such a system of drains all communicating, subdivided into regular square fields, of eight or ten acres each, or what would give them a little more advantage in regard to draining and irrigation, that they are parallelograms, having their breadth in the proportion of about 8 to 10 to the length. The earth excavated from the ditches should be carted into any arms of sloughs, which may be on the ground, or hollow places, which without being filled up might be injured, instead of being benefitted by irrigation. By such a network of ditches the land would not only be drained, and made susceptible of irrigation, but would also be subdivided into little fields, having all the advantages of inclosures. Nay further, such trees as the willow, the lime-tree, and the poplar might be planted along their edges, and all the advantages of shade and shelter for cattle which might be feeding within, procured, without any additional ground being wasted in consequence.

In some portions of Holland, wind-mills are used, for the purpose of pumping out the drainage of their rich pasture lands; but wind at best is but a fickle power, and too variable in its operation to be used advantageously where valuable grain, and other cultivated crops are raised; and in England, such unsteady appliances are now superseded by steam. Deeping Fen near Spalding, containing 25,000 acres, is effectually drained by two steam engines, of 60 and 80 horse-power; and Littleport Fen near Ely, containing 28,000, is drained by two engines, of 30 and 80 horse-power.

Here no such excessive power would be wanted, for draining an equal extent of land. A good water-tight embankment once built, we would seldom have to pump out more water, than the rain which falls on the land in winter, and two comparatively small engines—one to pump in water and another to pump it out—would keep a constant flow of fresh water in circulation through all our ditches, sufficient to irrigate the whole. This would be necessary, as every one knows that irrigation cannot be profitably effected, without a constant supply of fresh water. These engines once erected, the expense of keeping them working would not be very great. It is said, that "it has been proved, that by a common condensing steam engine, one bushel of coals will raise more than 50,000,000 pounds of water, one foot." But in several instances one, and in some, both of these engines might be dispensed with. In reclaiming such a large extent of country, we would frequently have an opportunity of diverting a mountain stream, or water from a river, so as to provide a sufficient supply, for the purpose for which we want it. In others, in consequence, also, of draining a large extent of ground, a sufficient fall would be afforded for draining off the water, and where the land reclaimed was bounded, and rendered naturally unproductive by a river, in which the tides rose and fell, we might take advantage of the circumstance, and construct proper floodgates, by means of which the expense of pumping out might be saved. In treating on the proper management of land so situated, I cannot do better than repeat the sensible directions of Mr. T. F. Lambson, of Salem, New Jersey: "1st. The marsh should be secured from the tide by a permanent bank. 2d. A sluice, or sluices, of a sufficient capacity must be laid, to discharge the rain water, and back-waters, which proceed from adjacent uplands, so that, at no time, the watercourses and ditches will be filled to overflowing. The sluices should be laid deep enough to draw the water through them, from the lowest part of the marsh. Great care should be taken to have the doors made tight, so as to exclude all the water possible. The watercourses and drains should intersect each other at right angles, and no lot of marsh land should contain more than ten acres. If any rainwater should lay upon the middle of these lots, *it will be necessary to cut small drains, to let it pass off freely.** These might be covered where the materials are at hand. The mud and earth, which come out of watercourses and ditches, should be removed into the lowest part of the marsh. By a neglect of this, the rainwater will be confined too long on the surface, and the most luxuriant growth of timothy or clover may, in a short time, be converted into a nursery of rushes."

Our swamp lands properly drained, and the ground sufficiently dry to admit of being plowed, let the tules, and other aquatic plants, reeds, and grasses, which grow on them, which can be burnt, be so, so as to form no impediment to the plow. After which, let the land be well turned up with a trench plow. When plowed over, the future management will depend very much on circumstances. Where there are a great number of roots, and the furrows lie open, and the surface is much exposed, it would frequently be better not to attempt cropping for the first year, especially as in such cases we would have an opportunity, during our dry summer weather, of burning up the rough surface and roots, and thus at once removing every incumbrance. But where no such impediments prevail, the ground may be sown with oats for hay, or any other crop, which the experienced farmer thinks most suitable, taking all the circumstances of the case into account. I am partial to the diagonal Scotch harrow, but for such land, when newly broken up, it is unsuitable. Its great recommendation is lightness, and efficiency in making a smooth surface. Here we would require a strong and heavy harrow, and none is equal for our purpose to the triangular, with coulter shaped teeth, strongly fastened with screws and bolts, and having plates of iron underneath the bars, with handles attached to it, so as to admit of its being lifted, for the purpose of removing roots and weeds.

* This I entirely coincide with.

When the ground is left fallow for the first season, an opportunity is afforded of having it well broken up in the course of the summer; and it would, in consequence, be in an excellent condition for being planted next year with potatoes, a crop for which it would generally be found particularly adapted. But there is no crop for which such land is not suited, and it is this circumstance, among others, which would make our Tulé swamps, when properly subdued, so pre-eminently valuable; as we would, on such lands, have an opportunity of introducing a system of Agriculture not hitherto practiced in California, and which in most cases has so many obstacles to contend with, as to render it almost impractical. I mean a regular system of convertible agriculture, where grass, grain, and green crops follow each other in proper succession, and by means of which, the natural fertility of the soil may be retained *ad infinitum*.

It is usual, in describing a rotation of crops, to commence with the green crop; but let us in this instance suppose that such crops have been carried, and that the land properly broken, and perfectly free from weeds, is in proper condition to be sown with a grain crop, to be followed by artificial grass. Of course I do not mean that the whole land, under the management of one farmer, has been in any one crop at once, but that an equal proportion of his fields, adapted to the particular rotation which he has concluded to adopt, have been so, and which any one, having a farm divided into a number of small fields, such as the peculiar circumstances of our low lands render necessary, will have an excellent opportunity of adjusting, so that while some of the fields in one crop are at a considerable distance, others may, for the sake of convenience, more immediately adjoin the homestead. But let us proceed to lay down the land in a suitable grain crop. Of all grain crops, as I know from my own experience, none of those usually grown in this State is so well adapted for giving the young grasses, which are now to be sown, the best opportunity of having a vigorous start, as barley. It does not require to be so early sown as wheat, and is not so tall, and it grows more sparsely on the ground than oats, so that the young grasses among its roots would have more air, and besides it grows quicker, and is sooner off the ground. I flatter myself that we will soon have *chevalier*, and other superior varieties of barley, introduced into this State, the weight and plumpness of which could not fail to recommend them to the especial notice of the maltster, and procure for them the highest price in the market. Barley is a crop which seems prescriptively suited for California, and such superior soils would be admirably adapted for the best varieties.

It is usual in California to commence at the outside of the field, and plow round and round. Such a clumsy mode of cultivation ought, on no account, to be adopted on low lying lands. We want straight open furrows, to assist in letting the water as freely off as possible. Let such ground be plowed in regular lands, or ridges, of the same width, and not too broad, with well-opened water furrows between them. As well as letting the water more freely off, this will greatly facilitate the operation of sowing, and give the field a far more respectable appearance. Let us suppose that we have concluded to make our lands twenty-four feet wide. The farmer, or some experienced and intelligent laborer, should measure off with a tape line, or rod, a distance of six feet from the edge of the field, setting a row of poles at such distance all the length. Let one of the best plowmen on the farm proceed to open a furrow along the line of these poles. This, with a little practice, he will perform so as to make his furrow perfectly straight. Let him then turn round the horses, and throw another furrow from the same place to the other side, thus leaving a wide, open furrow, with an equal quantity of mold on both sides of it. Whilst he is making this second furrow, let the person who is setting the poles proceed, expeditiously, to remove them a distance of thirty feet, in a straight line as before; which he ought to have done by the time the plowman has completed his second furrow. Along this line the plowman opens up a double furrow as before. And again the poles are removed, for such operation being again performed. But this time, and consecutively, only a distance of twenty-four feet. The reason of six feet being taken off the edge, and thirty feet instead of twenty-four, on the next occasion, was, that the lands may be all twenty-four feet wide, which is thus produced. The plowman proceeds to *gather up* the ground next the edge of the field, thus: He plows again into the newly opened furrow, and round it, and continues so plowing till he has reached the edge of the field. By doing which, as any one will perceive, he plows a land of twelve feet in width, and the land which was thirty feet broad has been reduced to twenty-four feet, the same as the others. The plowman now proceeds to *split out* the twenty-four feet lands, by laying twelve feet to the one side, and twelve feet to the other. Thus twelve feet more is added to the twelve already plowed, by the time the last furrow in the unplowed ridge is turned over, and regular ridges, or lands, twenty-four feet wide, *minus* the water-furrows between them, will be made all over the field.

Let no one say this is a needless refinement in Agriculture, and a waste of time. Two men and two horses will thus lay off a field of ten acres, in a few hours; so that afterwards any boy may plow it unmistakeably, and well. And besides, the lands are thus laid down for the whole rotation, and the operation of sowing is rendered more easy and perfect. But the great advantage, I would almost say the necessity, of laying off low ground in regular lands, with water-furrows between them, is, that in winter they form so many drains, along which the water will run with ease; and if the work ought to be done in some shape, I see no reason why it should not be done well.

The ground so plowed, and sown with barley or some other grain, with timothy and clover sown along with it, may be expected to grow an excellent crop; and the extra returns, it is probable, will compensate the farmer for any little additional labor which he has laid out in preparing the ground for its reception. But it is in his valuable hay crops which follow, and which he has such facilities, by means of irrigation, of growing in perfection, that the superiority of such lands will become most distinctly apparent. And I would be loth to say, because I might not be credited, how many aftermaths of clover, besides his principal hay crop, he might cut under the circumstances, in one season. For this reason, and because such land is so admirably adapted for pasturage, I would recommend that the fields should remain two years in grass—the first for hay, and the second for pasture.

By being depastured for one year, by means of which it would be enriched by the droppings of the animals which grazed on it, and consolidated by their tread, the land would be in an excellent condition for growing wheat, which will always be a principal and profitable crop, in this and ever other country adapted for its growth.

When the wheat crop has been gathered, we would, in the same season, have an excellent opportunity of giving such land a summer fallow. Under other circumstances, the farmers of California have to wait till the rains of winter have sufficiently moistened their fields to admit of their being plowed, but all that we would require to do would be to raise the water a few inches in our water-courses, or, if that were not enough, we might easily put the whole field under water together. Before winter arrived, we could thus have our fields plowed, and cross-plowed, and renovated in vigor, and every weed and grass, whether natural or artificial, exterminated; so as to have them in the best possible condition for green crops.

It will be perceived that such a system of husbandry is meant to have stock-raising and stall-feeding conjoined with it. This, as every one knows, is one of the most pleasant and profitable occupations of rural life. But apart from the direct profits resulting from the sale of his cattle, and dairy produce, when conjoined with tillage, the farmer thus possesses an inexhaustible supply of manure, capable, when properly cared for, of preserving his land for any length of time in all its original fertility. And now is the time to apply it, as the land is being planted with potatoes.

In planting potatoes in such low lands, it is always better to have them in raised drills; and for this purpose, and to allow the manure then applied to be properly covered, no better system could be followed, than that described so graphically in Stephens' Book of the Farm.

And here again, we are fortunately and singularly circumstanced. There is nothing to prevent us having two green crops in the same season; one of potatoes, and one of turnips. Potatoes, if planted early in March, would be ready to be dug about the 1st of July; and turnips would here be sown in good season in the month of September. This would be impossible on most farms now under cultivation in this State, in consequence of the ground being too dry to admit of turnips being sown at that season. But, as I have already observed, we have an opportunity of irrigating *our land* to any extent—thus making our Tule lands, when reclaimed, susceptible of a system of Agriculture, in some measure resembling the practice of the market gardener. In most countries two such crops following in succession would be highly objectionable, as the component constituents of both plants are so much alike, and both contain an unusually large quantity of alkalies. But these lands also contain them in unusual abundance, and as the turnip crop, and probably a large portion of the potato crop would be consumed on the farm, and the manure made from their consumption more immediately applied for the growth of such crops, there can be no rational objection to such a practice, nor any doubt of its satisfying the expectations of the farmer. The turnips, too, thus raised, would come at the very time when they are most wanted. There are two months, even in California, when vegetation generally makes no progress—the months of December and January. But the hardy turnip is the native of a northern climate, and, like the cabbage, forms an exception to the general rule, and when advanced to a certain stage of its growth will continue to grow in the plains, through our coldest winters. What an advantage would the systematic stock farmer thus derive? And how opportunely would its useful aid come in, at the very time when some such auxiliary is most needed? When the late clovers have been cut down by early frosts,

and the cattle refuse to eat their blackened stems?

I believe I have said enough to convince any one of the preponderating value of our Tule lands, when once reclaimed, over every other kind in the State. And I cannot contemplate any more prudent or profitable investment of capital, than that which may be laid out for bringing them under cultivation. WM. THOMPSON.

Are Carrots worth Cultivating.

A correspondent inquires whether Carrots are really worth cultivating as food for cattle? In answer to his inquiry, we present a few brief extracts from standard authorities:

The nutritive matter in carrots, as analyzed by Hermstadt, comprise 9 per cent. of starch and fibre, 1.75 of gum, 7.8 sugar, 0.35 of oil, and 1.1 of albumen. Clater inserts them among his list of drugs, "because they contain the best medicine that can be given, either when the animal is slowly recovering from severe illness, or when he has much cough, or considerable humor or foulness about him." Prof. Norton says "a half bushel of carrots to each cow daily, will be found an excellent addition to their food; it gives sweetness and richness to the milk, making the butter of a yellow color, even in winter." Thaer remarks, that "Carrots afford excellent nourishment for all kinds of live stock; for this purpose, they are better than any kind of turnip." The same author, in his "English Agriculture," says: "the English, and particularly the Suffolk cultivators, were the first to show that horses may be kept in full vigor six months upon this food, although employed in the most laborious occupation." Mr. Merrill, of Mass., says, "for feeding horses, I should prefer 100 bushels of Carrots and 100 bushels of oats, to 200 bushels of oats." Mr. Curner remarks, "I have found by the experience of the last two years, that where eight pounds of oat feeding was allowed to draught horses, four pounds might be taken away and supplied by an equal weight of carrots; and the health, spirit and ability of the horses to do their work, be perfectly as good as with the whole quantity of oats. *An acre of Carrots supplies a quantity of food for working horses equal to* 16 *or* 20 *acres of oats.*" Low says, "it (the carrot) is admirable for all kinds of stock." We have Loudon's authority for asserting, "that Carrots when mixed with cut straw and a little hay, without corn, keep the horses in excellent condition for performing all kinds of labor." Burrows fed his horses on Carrots and hay only, from the last week of October until the first of June; he states that he fed ten cart horses in this way for six years, without giving them any corn whatever, effecting also a considerable saving of hay. Stewart in his "Stable Economy," speaks of the Carrot, as follows: "The Carrot is held in high esteem. There is none better, nor perhaps so good. When first given it is slightly diuretic and laxative, but, as the horses become accustomed to it, the effects cease to be produced. They also improve the state of the skin. They form a good substitute for grass, and an excellent alterative for horses out of condition. To sick and idle horses, they render corn unnecessary. They are beneficial in all chronic diseases connected with breathing, and have a marked influence on chronic cough or broken wind." We might multiply these quotations *ad infinitum*; but enough have been given to satisfy any reasonable farmer that Carrots are a most valuable article of food for cattle and horses, and if so, why should they not be more extensidely cultivated? If the Suffolk horses are kept in full vigor on them for six months in the year, why should not our horses be equally benefitted by their use? If, as experience has abundantly proven, Carrots are excellent and profitable food for cows, why should not our farmers avail themselves of these excellences? "Because," answers one who undertook their cultivation, as he does everything else, in an un-farmerlike manner, "oats or corn are more profitable." We will feel greatly obliged to the correspondent who will satisfactorily prove that the Carrot crop is not one of the most valuable which can be grown. With anything like proper cultivation, Carrots will yield at least 500 bushels to the acre, and in some instances the yield has been treble that quantity. Estimating them at 25 cents a bushel, and the expense of cultivation at $25 more per acre than oats, it is not difficult to arrive at a tolerably satisfactory conclusion as to the relative value of the two crops. At this time, Carrots command in Philadelphia, a ready sale at 50 cents per bushel, and we venture the assertion that tens of thousands of bushels would be required to supply the demand in this city alone if their value as food for horses and cattle was properly understood.

That difficulties do stand in the way of their cultivation, is admitted, but these difficulties are not insuperable, nor are they even formidable enough to afford room for discouragement. Where all the requisites of successful cultivation have been complied with, the cost has been ascertained not to exceed 12 cents per bushel, and in many cases, as much as one-fourth less. But admitting that they cost the farmer 16 cents, we contend that they are still more profitable than oats or corn; for in addition to the fact that the yield is very large, no other root crop leaves the soil in so fine a mechanical state for the growth of the following crop. In our next we will give the details of the preparation of the land and seed, and the cultivation and storing of the crop.—[Phila. Farm Journal.

HOW TO EAT STRAWBERRIES.—The Julmarnock Journal says, that those persons who have eaten strawberries served up in the following manner, will never eat them in any other way. The readers of our paper, who, we have reason to believe, are lovers of strawberries, will do well to try the experiment:

"Place as many berries as will form one layer at the bottom of a dish, and sift some fine loaf-sugar over them; then place another layer, and sift again. When there are five or six layers, cut a fresh lemon and squeeze all over them. Before helping, let them be gently disturbed, that they may have the benefit of the lemon juice and sugar."

AN ANCIENT BARK.—The New Bedford Mercury says: The whaling bark Maria, which recently returned to New Bedford from the Pacific, is beyond question the oldest vessel in the United States. We have so often sketched her prolonged career that a repetition is perhaps unnecessary, excepting always, the memorable fact that she was the first ship that hoisted the American flag in the river Thames at the conclusion of the war of the American Revolution. She has already outlived on the ocean many of her more pretentious juniors, and promises to do good service yet to her owners.

Miscellany.

THE GRASSHOPPER.

FROM THE GREEK OF ANACREON, 600 B. C.

Happy insect what can be
In happiness compared to thee?
Fed with nourishment divine,
The dewy morning's gentle wine!
Nature waits upon thee still,
And thy verdant cup does fill;
'Tis fill'd wherever thou dost tread,
Nature self's thy Ganymede.
Thou dost drink, and dance, and sing,
Happiest than the happiest king!
All the fields which thou dost see,
All the plants belong to thee;
All that summer hours produce,
Fertile made with early juice.
Man for thee does sow and plow;
Farmer he, and landlord thou!
Thou dost innocently enjoy;
Nor does thy luxury destroy.
The shepherd gladly heareth thee,
More harmonious than he.
Thee country hinds with gladness hear,
Prophet of the ripen'd year!
Thee Phœbus loves and does inspire;
Phœbus is himself thy sire.
To thee, of all things upon earth,
Life is no longer than thy mirth.
Happy insect! happy thou,
Dost neither age nor winter know.
But when thou'st drunk, and dane'd, and sung
Thy fill, the flowery leaves among
(Voluptuous and wise withal,
Epicurean animal)!
Satiated with thy summer feast,
Thou retir'st to endless rest.

[Translation of Abraham Cowley, 1618–1657.

Interesting Letter from Egypt.

A correspondent of the Boston Traveler, writing from Beirut, Aug. 20th, 1856, gives the following very interesting sketch:

THE first modern ruler of Egypt who had any idea of improving the condition of the country by constructing works of public utility, was the celebrated Mehemet Ali. Having been elevated to the rank of Pasha from an humble position and with a foreign origin, as he was an Albanian and not a Turk, and had embraced the Turk's religion for the sake of office and ambition, he was sent to Egypt by the Sultan as a province suitable for a man of his energy and restlessness. Irritated by provocations from the Porte, conscious of his great executive powers, and yielding to the promptings of his ambition, he made Egypt his own independent kingdom; and throwing off his allegiance to the Sultan, invaded and conquered Syria and Palestine, and was about to take possession of Constantinople itself, and make it the capital of *his* empire instead of being that of the Sultan, when the allied fleets of England, France, and Russia, drove him back to Egypt at the moment Turkey lay at his feet. The Porte and its allies stipulated that he and his heirs should have the government of Egypt henceforth to all future time, independent and undisturbed, upon the payment of an annual tribute to the Porte of about $300,000, and be dignified with the title of Viceroy. The no less celebrated Ibrahim Pasha, under whom he won most of his victories and made most of his conquests, was not the *son* of Mehemet Ali, as generally supposed, but of one of his numerous wives. Abbas Pasha succeeded to the vice-royalty upon the death of Mehemet Ali, and the present Pasha, Mohammed Said, upon the decease of Abbas. The present Viceroy is said to be a man of great energy and large views, but sometimes cruel to his subjects, capricious in his movements, and given to luxurious habits which must shorten his life, if they do not indeed, as most predict who know him, soon end it.

Said Pasha, however, from mingling freely with the English and the French, has conceived ideas as humane as they are expensive; and should he be able to carry out his projected measures, he may bring back to Egypt something of its ancient glory. The internal improvements and public works projected, and in some instances completed or commenced by Mehemet Ali, he has adopted as his own, and designs not only to carry them out fully, but to add to them largely. His alleged cruelty is not exhibited, so far as I can learn, in acts of ill nature, passion, jealously, or malice towards individuals. He does not crowd his prisons upon mere suspicion, like the king of Naples, nor like him wear out his victims in dark, damp dungeons, or send them, after sham trials, away to execution. His cruelty is the conscription of young men for the army, who are seized without notice, and wherever found after sunset, and hurried away to the army without permission to bid farewell to those they love the most. Forced labor is also common upon the public works, in which great suffering is often endured, with sickness and death.

There are not wanting traits of humanity, however, in the Viceroy, as the following facts will show: He has an only child, a son, not above three years old, whom he has committed entirely to the care and training of an English governess. Not long since, on the occasion of a great festivity, when numerous Pashas and high officials were present, he ordered the governess to bring his child into the precsence of the distinguished guests, and she remained with her charge for some time in such strange company. The child clung confidently and affectionately to his guardian in view of such an array of beards and swords, while the governess made herself as easy as in an English parlor. So bold a deed on the part of the Viceroy, indicating a paternal heart and his approval of European usage in the social intercourse of the sexes, naturally created a great deal of wonder in the land of the Pharaohs. Besides this, Said Pasha has manifested a tolerant spirit in religion. Not only have the native Christian sects had the fullest liberty of worship, but English and American missionaries are allowed to prosecute their work without molestation, and recently the Viceroy ordered that all Christian soldiers in his army should be allowed to hold religious services in their own way. In the late war he furnished a strong auxiliary force for the Porte, for which service the Sultan recently sent him a costly sword by one of his Ministers of State, with a letter of thanks in his own hand. It is suspected by some that the Viceroy's ambition and energy suggest the thought of independence at some no distant day, of which some of his public works are in anticipation.

Saying nothing of the ship canal projected across the Isthmus of Suez, within two years only the Viceroy has introduced the following administrative measures, besides others of the same character: The abolition of slavery; discharging all the villages of arrear taxes; liberty of commerce and trade, instead of the former system of monopoly; the payment of taxes and duties in money instead of payment in kind; the amelioration of the state of the army; the extinction of all the old debts of the State; the equal liability of men of all religions and races to conscription; and the decision of a great mass of matters for a long time in litigation by abitration instead of the tedious process of law.

The railroad from Alexandria to Cairo is a work of *more* than two years' standing, but the fruit of the present Pasha's enterprising spirit. In addition to this, he has built two branches in the Delta, and is engaged in extending the main line from Cairo to Suez on the Red Sea, which when completed will make a line above 200 miles long. A telegraphic line is built along the railroad from Alexandria to Cairo, and for some months has been in operation: with the completion of the railroad it will be extended to Suez, and connected with a line to Constantinople, and another along the coast of Africa to Algiers, and thence across the Mediterranean to Europe. Lighting Cairo and Alexandria with gas, an expedition to the sources of the Nile, the re-organization of schools, and especially of the Medical School, and the cleaning out of the Mahmoudieh canal, are also among the honorable and useful acts of the Pasha within the last two years.

The Mahmoudieh canal was built in the year 1819 by Mehemet Ali, connecting Alexandria with the Nile. The length of the canal is 60 miles, with a depth of 18 feet and a width of 90. It was navigable only during the overflow of the Nile, and for eight months was dry. It is stated that 150,000 men, impressed into the service by the Viceroy, completed the work in a year, though tens of thousands of the laborers perished from excessive toil, insufficient provisions and accommodations, and a pestilential air. Being neglected for a long period, the canal partially filled up again, and made the navigation impracticable. Seeing this, Said Pasha resolved to throw out the earth which had fallen in, and restore it to its original use. Purposing to do the work in a month, if possible, he inquired of his engineer the number of men necessary to accomplish it, who gave 67,000. Every village and locality were required to furnish their proper contingents, to whom a certain portion of the new excavation was assigned, with the assurance the quicker it was done the sooner they might return. As the time of harvest was approaching, and the cleaning of the canal must be finished by the end of April, officers, overseers and laborers understood the importance of haste; and when the forces deployed along the line of the canal, they were found to number 150,000 instead 67,000. As soon as a party reached its "claim," hoes, shovels, pick-axes and baskets were found awaiting them. One used the hoe or shovel, another filled the basket, and three bore it away and emptied out its contents. A great number were up to their waists in water, and at night the ground was their bed, the heavens their curtains, and the stars the guardians which watched over them. The labor went on in the midst of joyful shouts, the workmen vieing with each other to see who could first execute the task assigned them, and putting forth all their strength to the sound of music,—for every province and every village had brought their eminent performers, such as are called for on great occasions, as the birth of a child, the rite of circumcision, marriage, and the feast days of the Moslem *santons*, or saints; for the Mahommedan calendar is as rich in the names and days of such characters as the Catholic. When the engineers and officers passed by in inspecting the works, they saluted them in the Arabic form: "God preserve your days!" Near by markets were located at suitable intervals, at which the laborers procured onions, nuts, dates, figs, cheese, eggs, &c.; while every morning fresh bread was distributed by the government. Thus these Egyptian peasants, called *fellahs*, converted the period of their hard toil into a long festivity.

Through the precautions taken by the authorities and the good spirits of the workmen, there was not a single case of mortality in this immense multitude of 150,000 men, whilst the instances of sickness was not more than five in a thousand. Thus with little expense to the government (for such labor is unpaid) this important canal was cleaned out, deepened and enlarged, though sixty miles long, between April 10th and May 3d. A government and people capable of so much well-directed energy are able to construct the proposed ship canal from sea to sea, and any other works which public utility may require.

The common day wages of the Egyptian peasants are sixteen cents, they furnishing their own provision!

The railroad already constructed and in operation between Alexandria and Cairo is more than 100 miles in length, and though the speed would fail to satisfy the go-ahead Yankee, a full day being required to pass over it, the utility, public and private, is incalculable. The conduct of Said Pasha is often vexatious to travelers; for when he is traveling he will sometimes detain the train for a day at some depot on the route, whenever the fit comes over him, whatever the inconvenience and loss to the passengers. The road is in the process of construction from Cairo to Suez, on the Red Sea, a distance less than that from Alexandria to Cairo, and will be completed by the end of the year. The line of electric telegraph will be extended to the same point and at the same time, where it is intended to connect it with the long line projected to the East Indies.

Another enterprise projected by the Viceroy, and sustained at his own expense exclusively, is a scientific expedition to discover the source of the Nile. The expedition will be composed of scientific men of different countries, and be conducted by a young traveler already favorably known by his African explorations. From the strong influence of the Viceroy in London, and from the fact that the government of that country is in the hands of another son of Mehemet Ali, it is thought the expedition will encounter no obstructions in pursuing their object, and be able to solve the grand problem of ancient and modern geography, which has hitherto defied the most ardent zeal and resolute self-devotion. Preparations for this enterprise are already in progress, whose results will be awaited with much interest by the scientific world.

In this connection it may be proper to add, that the Sardinian government has lately received a letter from Mr. Brun Rollet, Vice Consul of Sardinia at Khartum, in Nubia, dated from the banks of the Misselad, in which he states that after a month's exploration he had succeeded in reconnoitering the lake by which the waters of the Misselad and the Madj communicate with those of the White Nile; and that having found the mouth of the Misselad, which flows into the lake, he had, under the escort of twenty-three Egyptian soldiers, penetrated to the river, and ascended it to the distance of 120 miles when he wrote. His intention was to go up the river as far as he could; and he declares that from its width and depth he has no doubt it is the real Nile. Mr. Rollet's opinion on such a subject is said to be entitled to great respect, from the fact that he has made numerous excursions up both the Blue Nile and the White Nile. From what the natives told him, it appears that the Misselad, in the rainy season, overflows an immense extent of country. As far as he had gone, the vegetation on the banks was luxuriant, and the reception given him by the natives, though not always favorable, was not hostile.

As I may not be nearer to the Desert of Sahara for some time to come, I will here add, that under the direction of a French General of Algiers, a boring has been made in the desert for water with the most complete success. The Artesian well is 180 feet deep, and the spring furnishes about 1000 gallons of water per minute, which is clear and of an excellent quality. The engineer who conducted the work exhibited great energy and resoluteness. For thirty-nine days and nights the work went on without the least interruption, notwithstanding the thermometer sometimes stood 115 degrees!

Should the same process be followed in the desert between Mount Sinai and the Holy Land, which is as utterly without wells and fountains as in the days of the Israelites, though in some places puddles of brackish water are found, which neither men nor animals can drink, probably the same success would follow, and travelers be saved the necessity of carrying water in skins for about twenty days' march. Perhaps water could be found in the great American desert by the same operation, and thus an immense waste be made inhabitable by millions of human beings. At any rate it is worth while to make the experiment.

Literature and Longevity.

AN opinion has been expressed (says Mrs. Sigourney, in her interesting volume, "Past Meridian"), that literary labors, or habitual excursions into the regions of imagination, are adverse to the continuance of health, or even the integrity of intellect. Grave charges, truly! and examples to the contrary may be easily adduced.

Premature death and mental declension are confined to no profession or condition of life. Too early, or undue stress laid on the organs of the brain, is doubtless fraught with disastrous consequences. Still, their constant and severe exercise may comport both with physical welfare and longevity.

It is indeed true, that Swift "expired a driveler and a show"—but not until he had passed seven years beyond the span allotted to human life: and the amiable author of the "Task" closed his pilgrimage in a rayless cloud at sixty-six; and Walter Scott sank at sixty-one, under toils too ambitiously pursued for the safe union of flesh with spirit; and Southey, whose reckless industry precluded needful rest, subsided ere sixty-eight into syncope and the shadows of darkness; and Henry Kirke White faded at twenty-one, in the fresh blossom of his young renown; and Byron, at thirty-six, rent the fiery armor of genius and of passion, and fled from the conflict of life.

Yet Goethe, unimpaired by the strong excitements of imagination, saw his eighty-second winter; and the sententious architect of the "Night Thoughts" reached fourscore and four; and Voltaire, at the same period, was still in love with the vanity of fame; and Corneille continued to enjoy his laurels to seventy-eight; and Crabbe, at an equal age, resigned the pen which had sketched, with daguerreotype minuteness, the passing scene. Joseph Warton, until his seventy-ninth year, made his mental riches and cheerful piety sources of delight to all around him; Charles Wesley, on the verge of eighty, called his wife to his dying pillow, and, with an inexpressible smile, dictated his metrical effusion; and Klopstock, the bard of the "Messiah," continued until the same period to cheer and delight his friends. Isaac Watts laid down his consecrated harp at seventy-four; and our own [American] Trumbull, the author of "McFingal," preserved till eighty-two the bright, clear intellect whose strains had animated both the camp and the cottage. The illustrious Metastasio detained the admiring ear of Italy until eighty-four; and Milton, at sixty-six, opened his long eclipsed eyes on "cloudless light serene," leaving to the world the mournful memories of "Lost Paradise," with living strains of heroic and sublime counsel. Mason was seventy-two ere "the holy earth," where his "dead Maria" slumbered, admitted him to share her repose; and the tender Petrarch, and the brave old John Dryden, told out fully their seventy years, and the ingenious La Fontaine, seventy-four; while Fontenelle, whose powers of sight and hearing extended their ministrations to the unusual term of ninety-six years, lacked only the revolution of a few moons to complete his entire century.

Those masters of the Grecian lyre, Anacreon, the sweet Sophocles, and the fiery-souled Pindar, felt no frost of intellect, but were transplanted as evergreens in the winter of fourscore. At the same advanced period, Wordsworth, in our own times, continued to mingle the music of his verse with the murmur of Rydal's falling water; and Joanna Baillie, to fold around her the robe of tragic power, enjoying her ninetieth year the friendship of the good, and the fruits of a fair renown. Montgomery, the religious poet, so long cherished guest amid the romantic scenery of Sheffield, departed at the age of eighty-two; and Rogers, who gave us in early life the "Pleasures of Memory," was cheered, at ninety-three, with the love of all who ever came within the sphere of his amiable virtues.

It was a brighter vernal day than often occurs under English skies (says the lady writer quoted above) when I drove to Hampstead to see Joanna Baillie. I found her seated on the sofa, in her parlor, surrounded by many pictures—herself, to me, the most pleasant picture of dignified and healthful age. On her cheek was somewhat more of a color than usual; for she had just returned from a long walk among her pensioners, and the exercise and the comfort of active benevolence lent new life and expression to her smile. Seventy-six years had absorbed any charm that youth might have bestowed; yet to my eye she was beautiful. On the same sofa was her sister Agnes, whom she so intensely loved, and to whom one of her sweetest poetical effusions was addressed. Though several years beyond fourscore, her complexion was singularly fair, her features symmetrical, and her demeanor graceful and attractive. Between them was seated Rogers, the banker-poet, with locks like the driven snow, having come out several miles from his mansion in St. James' Park to make them a friendly call. His smooth brow and fresh flow of conversation made it difficult to believe that this could be indeed his eightieth spring. It seems he had been kindly advising the authoress of "Plays of the Passions" to collect her fugitive poems, from their widespread channel, into the more enduring form of a volume. As she felt disinclined to the labor, he had himself undertaken and accomplished it, and was now discussing the success of the publication, and enjoying the high suffrages of criticism as if they were his own. Their cheering joyous tones pleasantly blended; and mental communion and service seemed to have given them new youth, or rather to have kept it perennial.

Even now I imagine that I hear the voice of the venerable poet repeating, with deliberate intonation and perfect emphasis, his favorite passage from Mrs. Barbauld, who herself resided in the immediate vicinity, at Hampstead. It was written in extreme old age, but with unfaded vigor of intellect:

"Life! we've been long together,
Through pleasant and through cloudy weather;
'Tis hard to part where friends are dear,
Perhaps 'twill cost both pang and tear;
So, steal away, give little warning,
Choose thine own time—
Say not, Good-night! but in yon happier clime
Bid me, Good-morning!"

Plato wove for the men of Attica his beautiful theories to the age of eighty-one. Newton, as illustrious for Christian humility as for intellectual greatness, laid down his earthly honors at eighty-five; and Franklin, who, in the words of Mirabeau, "stole the lightnings from heaven, and the scepter from tyrants," cheered us with the mild radiance of his philanthropy till eighty-four; and Herschel rose above the stars, with which he had long communed, at eighty-three—while his sister, whom he had so kindly made the companion of his celestial intercourse, survived until ninety-seven. Mrs. Hofland and Miss Jane Porter reached seventy-four, in dignity and honor; Mrs. Champone, seventy-five; Mrs. Piozzi, the biographer of Dr. Johnson, eighty-one; Miss Burney, eighty-eight; Mrs. Carter, eighty-nine, and the venerable Hannah More died only one year younger, having, with indefatigable industry, composed eleven books after she had numbered her sixtieth birthday; Mrs. Elizabeth Montague and Mrs. Sherwood lived to be eighty-one; and Mrs. Barbauld to a more advanced age.—[Wesleyan Methodist Magazine.

GAIT AN INDICATION OF CHARACTER.—Observing people move slow—their heads move alternately from side to side, while they occasionally stop and turn round. Careful persons lift their feet high and place them down flat and firm. Sometimes they stoop down, pick up some little obstruction, and place it quietly by the side of the way. Calculating persons generally walk with their hands in their pockets, and their heads slightly inclined. Modest persons generally step softly for fear of being observed. Timid persons often step off from the sidewalk on meeting another, and always go round a stone instead of stepping over it. Wide awake persons "toe out," and have a long swing with their arms, while their hands shake about miscellaneously. Careless persons are forever stubbing their toes. Lazy persons scrape about loosely with their heels, and are first on one side of the walk and then on the other. Very strong minded persons have their toes directly in front of them, and have a kind of stamp movement. Unstable persons walk fast and slow, by turns. Venturous persons try all roads, frequently climb fences, instead of going through the gate, and never let down a bar. One-idea persons are very selfish, and "toe in." Cross persons are apt to hit their knees together. Good-natured persons snap their thumb and finger every few steps. Fun-loving persons have a kind of jig movement. Absent minded persons often take the wrong road, and sometimes find themselves up to their knees in a mud puddle, although the sidewalks are excellent. Dignified men move slow and erect. Fast persons cut across the corner, kick every dog they meet, knock down little children, run against the ladies, and hit every twelfth man's ribs with their elbows. Very neat men occasionally stop to wipe the dust from their boots; their hands hang by their sides. Very polite persons are sometimes seen bowing in their course to black servant girls and black stumps. —[Selected.

Agricultural Bureau at Washington.

WE learn, says the Country Gentleman, from one who has recently visited this department of the Patent Office, that it is gradually gaining in usefulness and importance to the interests of the Agricultural public. An appropriation of $30,000 has already been made by the present Congress, and a further appropriation of $70,000 will be asked for before the close of the session, making in all the sum of $100,000 for the current year.

About $20,000 are to be expended for seeds and cuttings. About forty bushels of English turnip seed has recently arrived at New York, and is now probably in the process of being distributed. The Bureau received at the same time four hundred bushels of peas, and seven hundred pounds of early York cabbage seed.

One thousand bushels of wheat have been ordered from the Mediterranean. In distributing this wheat, especial reference will be had to experiments in cross-foundation, by which it is thought new and valuable varieties of wheat may be obtained.

Dr. Parker, U. S. Commissioner to China, has had $1,000 placed at his disposal for the purchase of seed.

Mr. W. T. Dennis has been commissioned to visit every State in the Union, report upon its grasses, and procure seed for distribution. When seed has been procured, experiments will be instituted with a view of ascertaining what grasses are most permanent, most prolific, and most nutritious for stock, in every district or county in the Union.

Dr. C. T. Jackson, is permanently engaged in chemical experiments of considerable value. By one set of experiments, Dr. Jackson has proved that oil, worth about seventy-five cents per gallon, can be extracted from cotton seed, leaving a cake worth two or three cents per pound.

Experiments of much promise are projected, among which are those by which the amount of phosphate in the worn out soils of the east, as compared with the virgin soils of the west, are to be determined.

These are some of the chief operations at present being carried on or projected by the Agricultural Bureau, under the direction of Dr. D. J. Brown. They certainly promise important results to the agricultural fraternity.

CHASING A GREASED PIG.—We learn that a novel kind of amusement was got up at Felchville, in the town of Natick, on the afternoon of Thanksgiving Day. A small pig with the bristles cut off, was greased all over and placed in a field, and twelve young chaps entered to compete for the prize, the one who should first should the pig to have it. Frank Murphy won the pig.

A wheelbarrow feat, more profitable than Ben Perley Poore's also came off, the one who should, blindfolded, wheel nearest to a stake in the field, having the prize of $2 50. A large crowd assembled to see the fun.—[Milford Journal.

LIFE IN THE MOUNTAINS.—An individual, known as Maltey, recently turned up after traveling three days and nights among the hills in the vicinity of Shasta without food. It was supposed that he had perished in the snow.

The California Farmer.

SACRAMENTO, FRIDAY, JANUARY 16, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

OUR PUBLICATION OFFICES.

In order to facilitate and advance the interests of our paper, and to promote the cause we plead, we shall issue our paper hereafter at San Francisco and Sacramento, simultaneously, having offices in both places. Our Office in Sacramento as heretofore, and our Office in San Francisco, No. 130 Washington street, near Sansome.

Our New Volume.

With this issue our patrons will receive Number One of Volume Seven of the California Farmer. Three years we have been permitted to address many friends who have journeyed with us, and to these and to all who have joined us on our journey, we tender our warmest thanks. The efforts of the past, we trust, will be our guarantee for the future. We shall aim to improve in each volume. Some plans which we have in progress, not yet completed, we hope will gratify our friends, when we lay them before the public. Our aim shall ever be to improve—our motto is onward progress.

We do not wish to promise too much, but we will do all we can to deserve well of our friends, and may we not hope for their cheerful and hearty co-operation and assistance. If each subscriber would only send us one additional name, how much more we could accomplish.

Our plans for the future, with our Prospectus, will appear in No. 2, and ere that we hope to have many hundred new subscribers from our friends, to commence our New Volume. We ask a fair judgment of our journal—we ask a generous support.

The People are Coming.

Yes! the people are coming. The little cloud, no bigger than the hand, will soon spread over the whole horizon of the Pacific, and we shall see the coming spring an emigration setting this way that will cheer the hearts of the desponding and awaken to new life the wheels of industry and prosperity.

We feel conscious that no one will esteem it egotistical on our part when we say that in striving to reveal the great resources of the State, we *have* labored to promote the best welfare of California. We have ever believed that over and above the value of her mineral treasures there lay hid in her soil a mine of wealth richer than all Golconda's treasures; and these her agricultural products, and to this point we have labored earnestly, and we feel we have done it conscientiously and faithfully, believing great good would flow from it, and we can say with some degree of satisfaction, we have not labored in vain.

The great effort should now be to call to our shores thousands, tens of thousands, and hundreds of thousands, and it can only be done by scattering far and wide over all the great States of our Union, and Europe, a true knowledge of our resources, a true and faithful account of our climate and soil, and its capacity of sustaining a great population; and also of giving wings to the truth, that we have churches, colleges, schools and all the needed facilities for sustaining and making comfortable and happy all who desire to come. Let the people of California do this, and there shall come to our shores a population of the right kind. They will not be mere hunters for gold; they will not be office-seekers; they will not be loafers and idlers, the mere scum of over-populated cities; but they will be farmers, mechanics and manufacturers, and they will not come alone, but they will come in families and whole districts, and thus bring their wealth with them—wealth of more priceless value than the gold of Ophir, for they will bring their *industrial habits*. They will be working men and working women, and they will come, as the great text book says, "as doves flocking to their windows."

We have said we have not labored in vain. No, for we have continual proof that there is an earnest spirit of inquiry in all the great States of the Union about California, and if our people are wise the opportunity of giving the required knowledge will not be lost.

In proof of this, we lay before our reader a letter, which we have received from a correspondent at Marysville, just from the Eastern States, and although simply a letter on friendly business, not intended for publication, we deem it so really important that we ask the indulgence of our friend for making it public—and it is a source of pride and pleasure that we have been instrumental in often setting the ball in motion in this way. So we say to our Virginian, and all other friends in every State of the Union, and the world,

Come! come!! come!!! our hearts are large and warm, "Uncle Sam is rich enough to give us all a Farm."

The following is the letter referred to:

Yuba City (Cal.), January 12th, 1957

Col. Warren: Having returned from a seven months' tour through the Western and Southern States, I desire that you continue the Farmer to my brother, at Harrisonville, Va., for six months, after the past year's subscription expires. It had scattered the California fever in that vicinity, before I reached there, to such an extent, that it was in vain for me to try counteracting the influence it had. The result will be a large immigration from the Chestnut hills in that vicinity, before the expiration of the above six months.

You will also please direct the Farmer for six months, to Daniel Ellington, Esq., Mattoon, Ill., and to George M. Hanson, Jr., Wytheville, Va., for the same period.

I will see you in Sacramento, soon.

Truly, Geo. M. Hanson.

Thus the work goes bravely on, and soon we shall have the immigration needed. Many thanks to our friend for his interest in our behalf—if all citizens would do likewise, the cry would be, "Still they come."

Wagonroad vs. Railroad—Immigration.

Every citizen of California who has interests at stake, and who feels that he is identified with the prosperity or adversity of the State, must see the pressing necessity of action upon these two great measures, the Wagonroad and the Railroad bills, which must come up again the present session of Congress. Now that the great and all-pervading topic of the past month (the election of Senators) is disposed of, we trust our citizens, one and all, will unite in every measure that will increase our population and build up our State.

We are grateful to know that all classes of business men are awake to the vast importance of taking measures to induce an emigration to California, for unless we can have an increased population, we must admit that so far as merchandising in our cities and towns is concerned, we must agree with a very wealthy and distinguished merchant on Front street, San Francisco, who said to us, a few days since, that unless we should have a new emigration, *California was gone in*. The effort made in New York city, by several of the prominent men of California and Oregon, to awaken attention to this subject, was a movement of great importance to California; and it will be a poor return for such effort to those gentlemen to know that here, in California, no feeling of interest was made in response to that action. We sincerely hope another steamer will not leave the port of San Francisco, without conveying to the friends in New York, a spirit of approval and co-operation from Californians.

But to the subject matter in hand, the "Great Highway" for an in-coming population, *a Wagonroad* and *a Railroad*: both these can be secured only by earnest and efficient action, directed to these results, and as we desire to lay before our readers arguments in support of our premises, we think of none more powerful, none more to the point, and none more honorable to the author and to California, for whom he plead, than the following extracts from the speech of the Hon. John B Weller, delivered in the Senate of the United States, on the bill to authorize and facilitate the construction of a Railroad and Magnetic Telegraph through the territories of the United States, from the Mississippi River to the Pacific Ocean, April 18,1856. Should any one say, this is an old speech, made a year ago, this is true, but if any one will read these extracts and see their truth as applied to California interests, they will say, with Mynheer, "'Tish petter as new."

The following extracts, being only part of the eloquent appeal, should be carefully read:

Mr. Weller said: Mr. President, this subject has occupied a good deal of the attention of the American people for many years past. It has been discussed in the public press, in popular assemblies, in national conventions, and in State Legislatures. More than twenty States have passed resolutions in favor of the construction of a railroad from the valley of the Mississippi to the Pacific ocean; and it cannot be doubted that a very large majority of the American people are in favor of this enterprise. Notwithstanding we have had their judgment pronounced at each session of Congress, in the form of memorials, petitions, and resolutions, yet we have been unable, up to this time, to procure the sanction of their representatives in Congress to this measure.

The importance of a railroad connecting the Mississippi river with the Pacific ocean, was brought to the attention of Congress in the year 1845, by the memorial of Asa Whitney, and in some shape or form it has been before us at each session of Congress since that year. Near the close of the last session a bill was for the first time passed through the Senate, providing for a Pacific railroad, with two branches, but it was too late to be acted upon in the House of Representatives.

Whatever opposition this bill may meet with in the Senate, it can hardly be charged by the strictest constructionist that it violates either the letter or spirit of the Constitution. Notwithstanding the absolute necessity, in my judgment, which exists for the construction of this road, I could not give my sanction to a bill which violates any of those constitutional principles by which I have been governed since my first entrance into public life.

It has been the policy of this Government, for many years past, to make large and liberal donations of the public lands to States and companies, to aid them in the construction of roads and canals. Nor has the Government suffered anything by this policy. Whilst the States have been materially benefited, the General Government, by the increased value of its reserved lands, has been fully remunerated for these donations. Ohio, Illinois, Alabama, Indiana, Mississippi, Michigan, and some other States, have been enabled, by this policy, to complete public works of incalculable value to the whole nation.

Under this system, the Federal Government is regarded as a land proprietor—the owner of an immense region of unoccupied lands; and, as such, is called upon to contribute towards a public work, which renders valuable, lands which in their present condition are valueless.

In these wild and uninhabited regions—now a howling wilderness—the hardy, enterprising emigrant would soon find a home, and surround himself with all the comforts of life. The uncivilized Indian and the beast of prey would soon disappear before the onward march of Christianity and civilization.

Senators have heretofore raised the objection that we did not possess the information necessary to enable us to determine the practicability of this enterprise. This objection no longer exists. We have already expended $340,000 in surveying and exploring the immense region of country through which we propose to run this road. The voluminous reports from the various parties are now before us; and they enable us to ascertain the facts necessary to enlighten our judgments. But notwithstanding these reports, and other reliable information which we have, I regret to say there are some Senators who still persist in affirming that the whole country between the Mississippi river and the eastern boundary of California is a barren and desolate waste, which can never be brought under cultivation by the labor of man.

Why, sir, in 1793, after the defeat of Generals Harmar and St. Clair, when it was proposed to send General Wayne with an army to protect the few white settlers northwest of the Ohio, it was opposed on the ground, that that section of country could never be made the abiding place of the white man. In that territory we now have some five millions of free, happy, and prosperous people. Hardy pioneers have converted that "barren wilderness" into a beautiful garden, which now blooms and blossoms as the rose.

Again, when we acquired Texas, it was said that that country was covered with swamps and marshes, which must forever prevent its cultivation; but my friend here from Texas [Gen. Rusk] will now tell you that the best cotton lands in the world are to be found within that State. The large exportations of cotton which she annually makes will sustain this assertion.

When that country from whence I come was purchased from Mexico, it was declared by one of our most distinguished statesmen that it was "not worth a dollar;" and yet within the last six years some four hundred millions of dollars in gold have been taken from her soil, and this is but the beginning of the work.

I have no doubt that Senators from the old States are falling into the same error with regard to the territory through which this road is proposed to pass. Rich and productive valleys, of no inconsiderable extent, will be found in the ranges of the Rocky Mountains, capable of sustaining a large population. We find by the official report of the Secretary of War, that what is called the Colorado desert is susceptible of reduction to cultivation by irrigation. He says:

"Another feature of interest developed in the course of the further examination of the work on the route of the thirty-second parallel is, that the Colorado desert, which is traversed by the route for a distance of one hundred and thirty miles, and which, in the report referred to, was noted as consisting of soil that needed only water to render it highly productive, is, in fact, the delta of the Colorado river; and, according to barometric levels, is so much lower than that stream, as to be easily irrigated from it. Thus there is every reason to believe four thousand five hundred square miles of soil, of great fertility, of which nearly one half is in our territory, may be brought into cultivation in one unbroken tract along the route."

The Secretary further says:

"In the first years of a war with any great maritime power, the communication by sea could not be relied upon for the transportation of supplies from the Atlantic to the Pacific States. Our naval peace establishment would not furnish adequate convoys for the number of store-ships which it would be necessary to employ, and store-ships alone laden with supplies could not undertake a voyage of twenty thousand miles, passing numerous neutral ports, where an enemy's armed vessels, even of the smallest size, might lie in wait to intercept them.

"The only line of communication, then, would be overland, and by this it would be impracticable, with any means heretofore used, to furnish the amount of supplies required for the defense of the Pacific frontier. At the present prices, over the best part of this route, the expense of land transportation alone, for the annual supplies of provisions, clothing, camp equipage, and ammunition, for such an army as it would be necessary to maintain there, would exceed $20,000,000; and to maintain troops and carry on defensive operations under those circumstances, the expense per man would be six times greater than it is now: the land transportation of each field twelve pounder, with a due supply of ammunition for one year, would cost $2 500; of each twenty-four pounder and ammunition, $9,000; and of a seacoast gun and ammunition, $12 000. The transportation of ammunition for a year for one thousand sea-coast guns would cost $10,000,000. But the expense of transportation would be vastly increased by a war; and at the rates that were paid on the northern frontier during the last war with Great Britain, the above estimates would be trebled. The time required for the overland journey would be from four to six months. In point of fact, however, supplies for such an army could not be transported across the continent. On the arid and barren belts to be crossed, the limited quantities of water and grass would soon be exhausted by the numerous draught animals required for heavy trains, and over such distances forage could not be carried for their subsistence.

"On the other hand, the enemy would send out his supplies at from one-seventh to one-twentieth the above rates, and in less time—perhaps in one-fourth the time—if he should obtain command of the Isthmus routes.

"Any reliance, therefore, upon furnishing that part of our frontier with means of defense from the Atlantic and interior States, after the commencement of hostilities, would be vain; and the next resource would be to accumulate there such amount of stores and supplies as would suffice during the continuance of the contest, or until we could obtain command of the sea. Assigning but a moderate limit to this period, the expense would yet be enormous. The fortifications, depots, and store-houses would necessarily be on the largest scale, and the cost of placing supplies there for five years would amount to nearly one hundred millions of dollars.

"In many respects the cost during peace would be equivalent to that during war. The perishable character of many articles would render it, perhaps, impracticable to put provisions in depot for such a length of time; and in any case there would be deterioration amounting to some millions of dollars per year.

"These considerations, and others of a strictly military character, cause the Department to examine with interest all projects promising the accomplishment of a railroad communication between the navigable waters of the Mississippi and those of the Pacific ocean. As military operations depend in a greater degree upon rapidity and certainty of movement than upon any other circumstance, the introduction of railway transportation has greatly improved the means of defending our Atlantic and inland frontiers; and to give us a sense of security from attack upon the most exposed portion of our territory, it is requisite that the facility of railroad transportation should be extended to the Pacific coast. Were such a road completed, our Pacific coast, instead of being further removed in time, and less accessible to us than to an enemy, would be brought within a few days of easy communication, and the cost of supplying an army there, instead of being many times greater to us than to him, would be about equal. We would be relieved of the necessity of accumulating large supplies on that coast, to waste, perhaps, through long years of peace; and we could feel entire confidence that, let war come when and with whom it may, before a hostile expedition could reach that exposed frontier, an ample force could be placed there to repel any attempts at invasion."

These facts show the importance of the road for military purposes; and I trust that those who sincerely desire to retain our possessions on the Pacific as a part of our Union, will allow them to exercise a proper influence on their minds.

If the telegraph, which I propose in this bill, were constructed, so that, in the event of a war, intelligence could thereby be communicated at once to San Francisco, we might possibly be able to obtain the supremacy of the Pacific before you had succeeded in obtaining the control of the Atlantic.

There are nearly six hundred vessels engaged in whaling upon the northern Pacific, and also a large number of clipper ships there, which could easily be converted into privateersmen, if suitable ordnance and ordnance stores could be obtained at our navy yard on the bay of San Francisco. Steamers could be dispatched to the whaling grounds immediately with intelligence that a state of war existed, and in this way we might equip a fleet which no ordinary force could easily overcome.

Although we are now separated from you by oceans and foreign States on the one hand, and on the other by mountains, and the wild, uncultivated country inhabited by some one hundred and fifty thousand uncivilized Indians (most of whom, by your policy, have been thrown between us), we still cling to the Union with all that ardent enthusiasm and all that patriotic devotion which characterize true Americans. Let us feel that your affections, your sympathies, as well as your interests, are identified with ours—allow us to have close and frequent communication with you as equals and as brethren of the same common family, and California will never desert you. I consider it utterly impossible in the very nature of things to retain our Pacific possessions unless you establish a direct communication with them; and I predict that, unless this is done, there will be an independent government on that coast in less than fifteen years. You must break down the barriers which Nature has interposed between you and them, or such will be the inevitable result. There is a "sick man" who is the owner of very rich and valuable lands immediately upon our southern border, and in the event of his death California might claim the right to administer upon his estate.

As an American who desires to see this Union pepetuated, I have made this declaration in the hearing of the Senate. Although loyal, as I have already said, to the Union, we must have *equal laws, equal rights, and equal protection*.

After giving various estimates of the time required to build the road—its costs and profits—with tables of other roads, &c., Mr. Weller proceeds in his eloquent closing remarks, thus:

But, Mr. President, I have already trespassed perhaps too far upon the time of the Senate; but I sincerely desire, if possible, to obtain speedy action upon this bill. Senators who have opposed it heretofore upon the ground that we had not sufficient information on the subject, can no longer doubt upon this point. I ask them to come up, in the spirit of patriotism, to aid me in the construction of this work, which will redound more to the glory and honor, and the future wealth and prosperity of our country, than any work ever undertaken by any Government of either ancient or modern times. Standing here as the sole representative of the Pacific coast, I am asking, at your hands, that justice and impartiality which will enable us to feel proud that we are a part of the American family. I ask you, Senators, to turn aside from the discussion of sectional questions, which are now convulsing the Republic from its center to its circumference, and unite with me in carrying through a measure which will ultimately make ours the greatest commercial nation on the globe. I invite you, in the name of a far and distant constituency, to observe the golden rule, and do unto them as you would others should do unto you. They love the Union. They are ready to sacrifice their lives, if necessary, to maintain it; but loyalty and protection are correlative duties. Whilst we stand by you, you must deal justly and impartially with us. No union, unless founded upon the *equality of the States*, can command their confidence or respect. Do to our people as you have done to others. Give us the same protection, the same facilities of communicating with the Central Government, and we will be the last, as I have already remarked—the very last—to abandon you. The same blood that runs through your veins courses through theirs; and, although most of them are now far from their native places, they have lost none of their attachment to the Constitution which binds us together as one people—none of the veneration for their illustrious ancestors who laid the foundations of our national greatness. As Americans, they look with admiration upon the same flag that now floats upon every sea, and is respected in every quarter of the earth; and have the same high hopes of our future greatness.

I invoke you, by the high character which your country has assumed amongst the nations of the earth—by the memories of the past—by the hopes of perpetuating this, the best and freest Government that the wisdom of man ever devised, to stand by me and give your sanction to this bill.

A Visit to San Jose.

We took a flying visit to the city of San Jose, the present week, to look at the nurserymen at work. We visited Mr. Prevost's nursery and garden, and found he had made great improvements since the Fair time. He had removed his green-houses to the new ground lately cleared, where the morning sun could rest upon them. Mr. Prevost's whole place is in very fine order, and his customers keep all hands at work very busily. This gentleman is soon expecting from France a large collection of orange trees and large camellias. We were pleased to hear from Mr. Prevost this fact, that there was a largely increasing demand for roses, garden plants, &c., and he attributes the increased attention to this subject to the "homes" now being built. Wherever a permanent home is built, there are sure to come orders for the ornamental part, and this should be the case over the whole State, for the home should be made as beautiful as possible. Mr. Prevost always manifests a very generous spirit in all his business transactions. His motto is "live and let live," and he takes pleasure in seeing his neighbors prosper as well as himself, and we have known of his efforts to secure business for his neighbors without the least jealousy or selfishness, and in a business of the kind named Mr. Prevost is an example of disinterested kindness.

We visited Mons. Delmas and found him busy in pruning his grapes. It will be remembered that this gentleman received the first premium of the State Society for the best collection of foreign grapes, and also for the best white wine. He showed us his system of pruning and the effort he is making for the coming year to have fine grapes and wine. His grounds are in most excellent order.

A call at the large nursery of Smith & Winchell convinced us that there was a great demand for fruit trees. Here we saw the evidence that the future of California would be great in her fruit orchards. Messrs. Smith & Winchell are selling trees by the thousand, and we have never seen finer trees grown. Many trees of two years' growth were from six to ten feet high, and well formed from the ground, and fully furnished with side branches in beautiful conical form. To show how much interest is manifested in orcharding, we can give actual sales as reported to us from this nursery. Messrs. Smith & Winchell have made one sale of $2,300, three sales of over $1,000 each, and many of $300, $500 and $600 each. They have sold the present season some 80,000 trees of various kinds. The peculiar condition of the financial market renders it necessary to accommodate in terms, and this we find is the case with all nurserymen. About twenty-five per cent. only of all sales is cash; the balance on time.

An immense amount of trees of all kinds are daily forced on the market at auction, yet trees from the regular nurseries, fresh dug, are always worth twice or three times as much, and orchardists will learn this by and by.

We are glad to see our nurserymen busy and prospering.

Good Titles.

If there is one thing that will make a man feel happy when quietly seated by his fireside and surrounded by those he loves, and in what he calls his home, it is to *know*, that *it is a home*, and one that no outsider can come and lay a better claim to what he has paid for than himself.

One of the heaviest curses, one that has inflicted a deadlier blow to the prosperity of California than even political misrule (if that were possible), has been, and still is, the unsettled condition of the *land titles*, so mixed up, so covered with grant after grant, or with Peter Smith, or Argenti, or Limantour titles, that purchasers get heart-sick, and leave the country in disgust. We would fain hope that before long *the business men* all over the State will see the necessity of some action that will give security to land titles, and then we could offer better inducements for families to come to California and settle with us.

These remarks are now presented to show we wish to present everything that shall tend to a great public good. Whoever aims to this point of settling titles and labors for it, should be esteemed of more than ordinary patriotism and abilties.

To puchasers of real estate in California, especially in San Francisco, where real estate is covered a foot thick with titles, he who can explain or perfect a title is indeed a benefactor. We were much instructed and also interested recently in examining the famous records of the firm of Gunnison & Parker, who have been at a heavy expense to prepare a "*chain* of title" from an early date to the present time. We saw several cases where estates had been conveyed from party to party, in all the changeable affairs, until the cost of the transfer had far exceeded the value of the estate in question.

Messrs. Gunnison & Parker have been at work for more than three years in preparing complete and reliable volumes which are of great interest to all who are engaged in real estate large or small; and we feel sure that these gentlemen will be amply rewarded for all they do to introduce them into California.

We hope persons about to buy land in San Francisco will call at Messrs. Gunnison & Parker's and see the labor that has been given to this subject; and we wish the same thing would be done in every county in the State. We can name with pleasure that W. S. Mesic, Esq., of Sacramento county, has a similar chain of title for that county.

Everything done to perfect and quiet land titles we look upon as a corner stone in the foundation work of California. It is the starting-point of the goodly, the beautiful structure that must rise ere long to attract the gaze of the world.

True Luxury.

True luxury consisteth not in that we enjoy alone, however gratifying it may be to our taste or appetite; even to our most exalted senses. True luxury can only be found in that inward consciousness of having secured happiness to others. Wealth, pleasure, the fruits of the earth, and the beautiful flowers that are scattered so profusely around us, when enjoyed alone, lose half their value. The greater half is gone, unless we can find objects with whom and upon whom we can confer a portion, so that our own enjoyment may be enhanced.

The purely selfish being can never know true enjoyment. That luxury consists in doing good and conferring happiness on those we love.

"Thou shalt love thy neighbor as thyself."

This command of Him "who spake as never man spake," was intended as a lesson to train the mind to be *forgetful of itself* while in the pursuit of happiness, and seek to find it witnessing the happiness we could confer upon others. The joy we create in others must of necessity flow back upon ourselves, the same as the gentle rains which are showered upon earth to make it bud and blossom are again drawn up by the heat of the sun to the clouds, again and again to be dispensed upon the earth to make it more and more beautiful. Then each tree, plant and flower give out from their thousand petals dew drops like tears of gratitude, tokens of their love, which the morning sun receives to its bosom as its reward for the life it gave to the flowers.

Go, mortal! go and learn by this how perfect are nature's plans. Be noble, generous, win the bliss of the truly happy man.

Fine Seed Potatoes.—We saw a very superior quality of Seed Potatoes at the warehouse of Messrs. Reynolds & Co., on Davis street, San Francisco. There were two varieties—the true Kidneys and the Lady Fingers, both white potatoes. These were very fine, and we hope will be freely grown. Messrs. Reynolds & Co., always have the very best.

The Value of Winter Evenings.

It must be a source of great satisfaction to every well wisher to the moral interests of California to note the change that has taken place in regard to the taste and desires of many of the young men of the present time. Until recently, the cultivation of the social and intellectual nature was overlooked or gave place to a desire for the acquisition of wealth or the pursuit of pleasure; but now, most happily, our State and cities teem with associations formed for the high purposes of acquiring a taste and knowledge of the highest and most useful sciences, and for controling, directing and educating the moral, social and intellectual tastes of the community.

We clip the following from the Buffalo Republican, and agreeing most fully with these suggestions, we feel we have reason of rejoicing to know that here in California we have such institutions as the Young Men's Christian Association, the Mercantile Library, the Mechanics' Institute and Reading Room, and many other means, such as Debating Societies, Lyceums, &c. But hear what the Buffalo Republican says on winter evenings:

Winter Evenings.—The long evenings are now fully at hand and much time may be devoted by our young men to mental improvement. Instead of spending their leisure hours on the corners of the streets, indulging as too many do, in profane and obscene language, if they would improve the hours thus spent in the acquiring of useful knowledge, which may be obtained at less expense than tobacco and cigars, they would not only benefit themselves but society at large, by becoming sober, intelligent and virtuous citizens, qualified to fill the various stations to which they may be called in after life. Could our youth but appreciate the value of well formed habits upon their future usefulness and prosperity in life, we feel persuaded that they would embrace every opportunity to cultivate the faculties with which they are endowed, and thus lay the foundation for future usefulness.

Valuable as are the suggestions of our cotemporary of Buffalo we, here in California, are improving our winter evenings. Besides the institutions of which we speak, and of which we are proud, an increasing taste for literature is evinced by means of social entertainments in private circles, conversation, music and readings of the best writers in prose and poetry. In all our cities we note this feeling with intense pleasure, and hail it with joy, and every well wisher to California's best interests should give this bright epoch a helping hand.

While we acknowledge there is great room for improvement in the social circles of fashion and pleasure we cannot but anticipate a change as striking as there has been in the condition of many in other matters.

Superior Sheep for California.—We learn from Messrs. Searle and Wynn, that they received by the steamer Golden Gate from New York, two Bucks and two Ewes, of very high character. These animals are yearlings, but weigh about 175 pounds each. Messrs. S. and W. inform us that they are reported to yield a fleece of 18 pounds at a shearing. The cost of the sheep in New York, was $1400.

We received a kind invitation to go and see these sheep, and shall do so at an early day and report particulars. Such stock are a great benefit to our State, and the importers are benefactors.

Amusements.—Go to the Museum, and see that genius Adams handle the bears, and Wirsen charm the snakes—corner of Clay and Kearny.

Go to Concert Hall—corner of Washington and Sansome—and see the interesting Diorama of Bunker Hill and Burning of Charlestown—these are worthy a visit.

The Earthquake at San Jose.—The earthquake was felt very sensibly at San Jose, and in all Santa Clara valley, and its effects upon the artesian wells was most singular. The well at the beautiful cottage of Col. A. J. Grayson rose some twelve inches above the usual flow, and then fell suddenly as much below—rose and fell several times and then resumed its usual current. The first well sunk, near Smith & Winchell's, which had flowed but slowly of late, ceased altogether. Another, at Guild & Brown's, was stopped. Several others rose and fell. The great well in the city suddenly ceased its flow and now barely runs. We have heard of other strange pranks, both on earth and in the water. We shall note further these results.

Information Wanted—Of Charles Douglas Clark, a native of Aberdeen, Scotland. When last heard from (11th June, 1854) was at Salmon River, Shasta county. Any information regarding said person will be thankfully received at the office of this paper, 130 Washington street, San Francisco.

Arrival of an Authoress.—The Hon. Mrs. Granville Whyte, of England, arrived in town yesterday, and has apartments at the Brevoort House. Mrs. Whyte is widely known in Europe and America as Miss Mulock, the talented authoress of The Ogilvies, Agatha's Husband, Olive, John Halifax, Gentleman, and other interesting and clever novels.

Perhaps no work of fiction in our language has had such personal influence and created such individual impressions, as John Halifax, Gentleman. It is a work of rare excellence, and has already achieved a universal popularity. We understand that the gifted authoress will send to the press, at an early day, another work, which is expected, by those who have seen parts of it, to enhance her already enviable reputation as a writer.—[New York Post, 23d Nov.

Holloway's Ointment.—Scorbutic Eruption and Scrofula. Nearly half the human race can bear witness to the efficacy of this wonderful unguent in the cure of these diseases. They never fail, however long standing or desperate the case may be. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot.

Spice and Wormwood Bitters.

The above Celebrated Tonic, so long and favorably known in the Atlantic States, is acknowledged superior to any Bitter now in use. It is concocted from the purest ingredients, and may be used by the most abstemious with beneficial effect. As an APPETISER, IT IS UNRIVALED! The subscribers are Sole Agents in California, and any other Bitter with this name, is NOT GENUINE.

THE LAW OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.

3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.

4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.

☞ Postmasters would oblige, by a strict fulfillment to the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.

Postage of the Farmer.—The Postage of the Farmer to any part of the State is only 6½ *cents per quarter, or 26 cents per year.* This is the lawful postage established by Congress, and when more is exacted it is a violation of law

A PERFUMED BREATH

What lady or gentleman would remain under the curse of a disagreeable breath, when by using the "Balm of a Thousand Flowers" as a dentifrice would not only render it sweet, but leave the teeth white as alabaster? Many persons do not know their breath is bad, and the subject is so delicate their friends will never mention it. Pour a single drop of the "Balm" on your tooth-brush, and wash the teeth night and morning. A fifty cent bottle will last a year.

A Beautiful Complexion may easily be acquired by using the "Balm of a Thousand Flowers." It will remove tan, pimples and freckles from the skin, leaving it of a soft and roseate hue. Wet a towel, pour on two or three drops, and wash the face night and morning.

Shaving Made Easy.—Wet your shaving-brush in either warm or cold water, pour on two or three drops of "Balsam of a Thousand Flowers," rub the beard well and it will make a beautiful soft lather much facilitating the operation of shaving. Price only Fifty Cents.

[PREMIUM MANUFACTORY.]
Hudson's Golden California Mustard.

The proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs., 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.

The proprietor also manufactures a very superior article of Salad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.

For any further information regarding this Mustard, we refer to the principal business houses in this city.

Purchases at wholesale or retail are specially invited to call at the office,

Ladies' Department.

SONNETS TO ADHEMER.

FROM THE ITALIAN.

BY ESTELLE ANNA LEWIS.

I'm roving up the river of the past,
Where thou and I, Adhemar, hand in hand—
Cheek pressed to cheek, whilom, were wont to stand,
Watching the golden moments as they passed;
Or, speechless gaze into each other's eyes
Until our souls arose in those expanses,
And stood up, face to face, exchanging glances
Of love, then swooned away in ecstasies.
Cupid through us gained immortality—
A passport through the gates of Eden won,
Since, while our flame lent ardor to the sun,
It held within itself a purity
That lifted it above the thought of sin—
And the full sanction of both heaven and earth did win.

My love for thee had not a parallel—
The dusky Queen of Egypt had ignored
The dizzy height to which my passion soared.
The burning Lesbian, in her Island,
Had never strung her lyre to such a hight,
Lest at the tension it had sprung apart,
And laid all shattered, shivering, like her heart.
Such love begot not Helen's fatal flight,
As thou, Adhemar, in my breast inspired.
Had Antony, Phaon, Paris been as true
To all love ever dreamed, or felt or knew,
As thou, whose gallant soul my being fired,
The Orient Queen had wooed no aspic sleep,
Nor Sappho made the wild Leucadian leap.

WOMAN'S EYES.

BY E. H. BURRINGTON.

I love the eye that looks an azure world,
For then I dream of skies, and all their blueness,
Or Violets in their own mute worth impearled,
Which show me beauty in their youth and newness.
I love the eye that seems a thunder cloud,
The stormy black one, flinging out its fire;
There is a hidden home behind its shroud,
Where all the spirits of young Love retire.
I love the grey eye—though the least of all—
Whose look is like the evening's silent fall,
An indistinct, unsettled kind of light,
The mingled poetry of day and night;
But blue, or black, or grey, or more uncommon,
I love them all when they belong to Woman.

Hard Times, Economy, and Housekeeping.

Some very sensible suggestions are contained in the following, from the Boston Traveler, which we commend to the proud and lazy:

Hard Times.—Mr. Editor: I have read several articles on this subject lately, and, as the case is a very serious one, I wish to offer some ideas from my own experience of forty years' housekeeping. I have kept a record, during the aforesaid time, of my expenses of every description, and can state what every one who has kept house during said period will acknowledge to be correct. Almost every article of marketing for a family has nearly doubled in price, and, in some articles, are three or four times dearer than they were in 1816. Tea, coffee, sugar, and some other imported articles are less now than formerly. All vegetables of our own raising are double what they were and potatoes cost now more than five times the price I paid for the very best quality ten years ago, and they were carted fourteen miles and put into my cellar in Boston. Labor was lower by one-half than it is now, and wages to female domestics ranged from fifty cents per week to one dollar. Clothing (if we exclude jewelry and extravagant silks, laces, etc.) is less than formerly.

But the extravagance of *fashion* is truly awful in men, and worse in women. These changes may be said to indicate prosperous times, and so it may be said with those who have accumulated fortunes, and are obtaining great profits on their business, and exorbitant interest on their surplus incomes. This class can affor to pay the highest prices for everything, as they are realizing a larger interest upon their capital than any increase in the expense of living could effect, however extravagant. I do not mean to find fault with any one for using his own property as he pleases, and obtaining for his money whatever it is worth, in the same manner as he would for coffee, cotton, sugar, or any other article of commerce. Nor do I object to his paying a high price for any article he may fancy, keeping a good table, horses and carriages, or any other luxuries in which he may choose to indulge his family, and which his means justify, but I merely state the means as a cause, in a measure, for the hard times complained of, by those of limited means, from small business; clerks and women, whose stipends were sufficient for their respectable maintenance some years ago, which remuneration has not been increased, but in some cases been sadly reduced.

These are the persons who are the sufferers from the prosperous times and the increase of prices for all articles of absolute necessity. But this class of society are not altogether free from blame, and they have it in their power to remedy the evil in some degree, if they are disposed to do so, by curtailing some unnecessary expenses and extravagances into which they have been led by unwisely imitating those who are able to bear them from having more ample means. It may be justifiable in a lady of fortune to avoid the cares of housekeeping, and placing the burden upon her superintendent and domestics. It may cost a third more, or perhaps double what the expenses ought to be, but for this freedom from care and trouble her husband is willing and able to pay. But with a wife whose husband is working hard to maintain his family, perhaps on limited means (which is the case with almost all the world, with few exceptions), the case is very different.

In such instances, the wife should superintend every thing herself, and dispense with all possible domestic aid. The difference between the expense of one or two domestics is very great, it is believed three or four hundred dollars annually, as the wages now paid to females is from one to two dollars per week, and their board, at the present cost of provisions, rent, etc., can not be less than three or four hundred dollars per week, without allowing any thing for the destruction they may cause, and, perhaps, their dishonesty. The wife of a man of moderate means should acquaint herself with what is necessary for the support of the family, daily, weekly, or monthly; and after a fair trial of a few months she can tell at once, at the end of the week or month, whether any waste has been made, and stop the leak at once; or, if living too fast, she can then see what can most easily be dispensed with, to reduce their expenditures to their means; and a man and his wife should frequently look over the account of their expenses together and then determine what they can afford.

If fifty pounds of sugar, a barrel of flour, or any other article is sent home on a given day, and lasts perhaps a month, you have reason to expect that the same quantity will suffice with the usual care for another month; and, if it does not, it would be as well to look into the cause. These things may be done by the wife alone, as her husband is occupied in winning bread for the bairns, and it is unreasonable to expect that our domestics will take much trouble in economizing for us. I have often heard such arguments used, and replied to by the lady of the house, by saying that such a course would not leave her any time to read, visit her friends, or amuse herself. I can only say that one case is an absolute necessity, and the other is not. But I also say there is time to do both.

I believe, Mr. Editor, that many men are deterred from marrying, whose means are sufficient, with economy, to maintain a family, from the fear of incurring expenses which their business and income would not justify, and from no other reason; and this difficulty is not confined to the middle classes of society, but is felt in the highest and most wealthy; and the last season at the watering places has been productive of very few engagements, from the exorbitant expectations of the belles and their papas and mammas; this is, however, occasionally obviated by uniting a rich young man to a lady equally wealthy. There are now so many conveniences, Mr. Editor, for leading a single life, by our own sex, that unless the ladies can make up their minds to be *real* wives, and dispense with some of the frivolities and extravagances of the times—to learn to *help*, rear and care for the family—I am afraid the aforesaid conveniences for celibacy may be extended to those who were intended to be the greatest blessing of this life. CAMBRIDGE.

MY DREAM.

I had a dream, a joyous dream—
I vainly thought 'twould last;
It did not teach me hopes were vain,
But ah! that dream is past!

It was blest childhood's time of joy,
That sweet and pleasant dream!
It cheered the heart that knew no woe,
But fled when sorrow came!

Selections from "Young America."

The following compositions are taken from the Young America, a manuscript quarterly, published by the lads at the High School for boys at Benicia, under the charge of C. T. Flatt, Esq. Whatever may be said of the style or merit of these compositions, it is very certain the lad is a real "Young America" that dare attack the fashions thus boldly.

We publish these brief pieces of composition to encourage boys to *think* and to put their thoughts on paper. By so doing, they will be enabled by a just criticism kindly given to cultivate a love and desire for that which is worthy.

Boys and girls' minds are like rich soils—if we do not grow flowers and fruit, *rank weeds* will spring up spontaneously, and soon outgrow and overshadow the bright flowers that nature placed originally there.

Nick of the Woods.

At the time of the settlement of Kentucky, the early settlers were very much annoyed by the Indians. They would sometimes attack them at night and early in the morning. If any one went to see a friend near by he would be in danger of being killed by some lowering Indian. When the settlers went to bed it was with a doubt as to whether they would ever rise again.

There was only one man in the settlements who would venture in the woods alone. He would roam about day and night. The settlers called him "Nick of the Woods." He was tall and robust, and the settlers called him Nick, because he was so ugly and big they thought surely that he could be no other than the "Old Nick." He went about howling for his pig, like a wild boar. The people could tell when he was around, for when he killed an Indian he would mark him with a cross. He was the dread of the Indians: if fifty of them were in a body they would run from him. If he was about you might look out for Indians, for he never went where he could get no prey, for he delighted in killing Indians. The Indians called him "Jibbenanoisa," which meant the Walking Spirit. YOUNG AMERICA.

Why are the Benicia school boys out of tune?

Because, unless they can B sharp they will have to sing to C Flatt.

A few Words about Bonnets.

At the present time, if a man happens to have a sudden longing for rural scenery, or wishes to regale his eyes with the sight of delicious looking fruit, he will only have to step out upon the great thoroughfares of all our cities, and, by waiting a few minutes, he will see a moving flower or fruit-stand, as the case may be, perched upon the head of some of fashion's devoted followers. On one side will hang a beautiful bunch of grapes with the leaves entwined throughout the fabric; right behind that, there will be a nice bunch of plums; on the other side, like as not, there will be some strawberries and cherries, and especially if the wearer happens to be young and pretty the observer will have an overwhelming desire to step forward and test the reality of the fruit; only, as he is about to do so, he will make a mistake and touch the *tulips*, which had hitherto been unobserved, instead of the fruit. He will see bonnets embellished by clusters of vegetables that would make an epicure's mouth water, and farmers walking along the street are surprised at seeing a peculiarly marked stalk of wheat, which he confidently supposed was in his granary, sailing along upon the head of some belle.

Now such bonnets as they have now-a-days we should like to know the use of. Suppose the wearer happened to be out on a pleasant afternoon, and suddenly a shower comes on and no vehicles in sight, now would not that lady be in a pretty predicament by the time she got home? and she would most likely be laid up with a cold for the next week. In our grand-mother's time bonnets were worn which covered the head, and did not have to be pinned on. To use a cant, but very expressive word, the bonnets of the present day are a "humbug."

What is the difference between the ages 16 and 61?

Because one is happy and careless and the other cappy and hairless.

BOOKS, &c.

☞ A GIFT BOOK FOR ALL SEASONS. ☜

FLORA'S DICTIONARY.

BY MRS. E. W. WIRT, OF VIRGINIA.

MRS. HENTZ'S WORKS.

THE MOST POPULAR IN THE WORLD.

COPIES OF ANY OF THEM SOLD SEPARATELY.

Mrs. Caroline Lee Hentz's Works.

T. B. PETERSON has just published a new, revised, uniform and beautiful edition of all Mrs. Hentz's works, printed on a much finer and better paper, and in far superior style to what they have ever before been issued in. Each book contains a beautiful engraving, illustrative of one of the best scenes in each work. The following are their names:

THE PLANTER'S NORTHERN BRIDE. With illustrations. Complete in two volumes, paper cover, of 600 pages, price One Dollar, or bound in one volume, cloth gilt, $1 25.

LINDA: The Young Pilot of the Belle Creole. Two vols., paper cover, price One Dollar, or one volume, cloth gilt, $1 25.

ROBERT GRAHAM. The Sequel to, and continuation of "Linda." Two vols., paper cover, price One Dollar, or one vol., cloth gilt, $1 25.

RENA; or, The Snow Bird. A Tale of Real Life. Two vols., paper cover, price One Dollar, or one vol., cloth gilt, $1 25.

MARCUS WARLAND; or, The Long Moss Spring. Two vols., paper cover, price One Dollar, or one vol., cloth gilt, $1 25.

COURTSHIP AND MARRIAGE. Two volumes, paper cover, price One Dollar, or one vol., cloth gilt, $1 25.

EOLINE; or, Magnolia Vale. Two volumes, paper cover, price One Dollar, or one volume, cloth gilt, $1 25.

LOVE AFTER MARRIAGE; and other Stories of the Heart. Two volumes, paper cover, price One Dollar, or one vol., cloth gilt, $1 25.

HELEN AND ARTHUR. Two vols., paper cover, price One Dollar, or one vol., cloth gilt, $1 25.

THE BANISHED SON; and other Stories of Real Life. Two vols., paper cover, price One Dollar, or one vol., cloth gilt, $1 25.

AUNT PATTY'S SCRAP BAG, together with large additions to it, never before published in any former edition of this or any other work. Two volumes, paper cover, price One Dollar, or one vol., cloth gilt, $1 25.

☞ Copies of either edition of any of the above works will be sent to any person, to any part of the United States, FREE OF POSTAGE, on their remitting the price of the ones they may wish, to the publisher.

To Architects.

PLANS ARE SOLICITED FOR A HALL FOR THE MECHANICS' INSTITUTE.

THE HALL to be in size—seventy feet front by one hundred and twenty-five feet in depth, three stories high above the basement; the first story to be designed for Stores, the second for a Public Hall the entire length of the building, and the third Miscellaneous. The Hall to be situated on a corner lot, seventy feet front by one hundred and thirty-seven and one-half feet in depth.

Plans for the above will be received up to the FIRST DAY OF MARCH NEXT, and for the set of plans most appropriate, and best adapted to the wants of the Institute, the sum of Three Hundred Dollars will be paid in the Stock of the Institute, when such plans shall have been adopted by the Board of Directors.

N. B.—Architects will accompany their plans with the necessary explanations, and the probable cost of building, and in no case must their name appear on either plan or explanation; but may be designated by a private mark, by which they may be identified by a duplicate.

By order of the Board of Directors.

G. D. STREET,
Chairman of Committee on Buildings.
Hall of the Mechanics' Institute, Dec. 16, 1856. v6-24

EDUCATION.

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by CORNELIUS J. FLATT, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17TH of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS: PER MONTH

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective, Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.

No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.

For further information or references, address the Principal.
v6-24 C. J. FLATT.

Young Ladies' Seminary, Benicia.

MISS MARY ATKINS, : : : : : : : PRINCIPAL.

THE School Year of this Institution is divided into two terms of five months each; but the term commencing January 5, 1857, will close May 1st, 1857, in order that the semi-annual vacations may take place hereafter in May and October.

At the close of each term there will be a thorough examination of the pupils in all of their studies.

The Course of Instruction is such as is usually pursued in High Schools, and also includes the accomplishments of Drawing, Painting, Vocal and Instrumental Music.

The government of the school is gentle, but decided. A daily account of the recitations and deportment of each pupil is sent, monthly, to the parents, who are thus regularly informed of the progress of their daughters.

All of the pupils board either with their parents or at the seminary, and are under the special care of their parents, or of the teachers of the Institution.

The School is open to inspection at any time, and friends are cordially invited to visit it; but no pupils can receive calls from any persons, excepting those introduced by the parents and guardians to the principal.

TERMS: PER MONTH.

Tuition in the Higher English Studies	$ 8 00
" " Common " "	6 00
" " Music and use of Instrument	10 00
" " Ancient and Modern Languages	5 00
" " Drawing and Painting	4 00
For Board (per week)	6 00
For Washing (per session)	25 00

No extra charge will be made for Vocal Music or Embroidery: neither are the pupils required to furnish their rooms, bedding, &c.; but each pupil must have every article of clothing distinctly marked with her name.

Payments are to be made invariably at the beginning and middle of each term, in advance.

THE
"HORTICULTURIST"
AND
Journal of Rural Art and Rural Taste.

COMMENCED BY A. J. DOWNING,

Author of "Landscape Gardening," "Designs for Cottage Residences," "Fruit and Fruit Trees of America," "Country Houses," etc.

Edited by J. JAY SMITH, Editor of the North American Sylva.

THIS popular publication, which is gradually extending its influence throughout the country, and is becoming indispensable to the tasteful Gardener, the Fruit Culturist, and the Floriculturist, will be continued under the editorship of J. Jay Smith, whose ability and taste in matters of country life are highly appreciated through the country.

The cultivation of the beautiful, both in Nature and Art, is justly esteemed an important element in education, and recommends itself to the attention of all who wish to make their dwelling and grounds attractive, and to surround themselves with those luxuries and adornments that spring from the fruitful bosom of the earth when cultivated by the practical hand. The typographical execution of the HORTICULTURIST is designed to be an index to its contents—neat, chaste and elegant. It embraces within its scope—

I. THE DESCRIPTION AND CULTIVATION OF FRUIT AND FRUIT TREES—a subject of vast importance, and in which we are already more interested than any other people.

II. THE DESCRIPTION AND CULTIVATION OF FLOWERS AND FLOWERING PLANTS AND SHRUBS, from the most delicate and tender to the most hardy and robust.

III. TO THE DESCRIPTION AND CULTIVATION OF ALL EDIBLE PLANTS, which are, or should be, grown in our gardens.

IV. TO GARDENING AS AN ART OF TASTE—with Designs for Ornamental or Landscape Gardening.

V. TO RURAL ARCHITECTURE—embracing Designs for Rural Cottages and Villas, Farm Houses, Lodges, Gates, Vineries, Ice Houses, etc., etc.

VI. TO ARBORICULTURE—or the Planting and Culture of Forest and Ornamental Trees.

VII. TO BOTANY AND ENTOMOLOGY—so far as these branches are connected with the general subjects to which the work is specially devoted.

The extended and valuable correspondence of THE HORTICULTURIST presents the experience of the most intelligent cultivators in America; the superior illustrations, and the instructive and agreeable articles from the pens of the editor and contributors, make it eagerly sought after by even the general reader interested in country life. To all persons alive to the improvement of their gardens, orchards, or country-seats—to scientific and practical cultivators of the soil—to nurserymen and commercial gardeners, this Journal, giving the latest discoveries and improvements, experiments and acquisitions in Horticulture and those branches of knowledge connected with it, will be invaluable.

A New Volume (12th year) commences with the January number for 1857; and it will be the constant aim of the editor and publisher, by every means in their power, to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style of the periodical press, each number containing 48 pages, embellished with a frontispiece and several other original and well-executed engravings. At the end of the year it will make a volume of six hundred pages, beautifully illustrated with over 100 engravings, many of them drawings of fruit and flowers from nature. These volumes, if taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature.

TERMS—Two Dollars a year—Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the art—Price, $5.

HORTICULTURAL, &c.

[PREMIUM ORNAMENTAL NURSERY.]

Mountain View Nursery,

Three-Quarters of Mile from San Jose.

THE Proprietor offers for sale the present season a large stock of fine Fruit and Ornamental Trees, Vines, Roses, Evergreens, and every variety of Garden Plants.

Particular attention is paid to the cultivation of Native Trees, and particularly the Evergreens of California, which are as fine as the world can produce.

A very fine collection of extra fine Roses are worthy of especial notice.

The Proprietor, having been in previous years connected with his brother in the United States Nursery, on the new Mission Road at San Francisco, and having former experience, is confident of pleasing all who may favor him with their patronage, which is respectfully solicited.

v6-21 3m WM. O'DONNELL.

FRUIT TREES! FRUIT TREES!!

Oak Grove Nursery, Alameda.

THE subscriber, whose stock consists of the finest varieties of FRUIT TREES, imported from the Nurseries of HOVEY & CO., Boston, and now from one to four years old, many in bearing the present year, consisting of—

Dwarf Pears	20 varieties
Plum	12 "
Apricot Plum	6 "
Foreign Figs (now in fruit)	7 "

All the best varieties of Apple, Peach, Nectarine, &c.

3,000 Los Angeles Grape Vines, now in fruit, three years old.

Strawberry Plants, &c.

Persons wishing to furnish their grounds will do well to visit the above Nursery and select for themselves, bearing in mind that to insure the healthy growth of a tree, it should be transplanted in the fall.

For particulars inquire of S. L. PALMER & CO., agents, corner of Washington and Davis streets, San Francisco, or to
v6-10 3m GEO. B. COOK, Proprietor.

United States Nursery,

On the New Mission Road, San Francisco.

THE Proprietor of this large Nursery and Garden desires to call the particular attention of the friends of Horticulture to the collection now offered, among which are the following:

Fruit and Ornamental Trees;
Roses, of every choice variety;
Green-house Plants, and Garden Plants.

Together with every article needed in Orchard, Garden, Greenhouse, Parlor or Garden.

The undersigned would most respectfully invite purchasers to visit his Garden and Greenhouses. Having been long established in the business he is confident he can furnish everything desired, as agreeably as any other establishment.

v6-21 tf JAMES O'DONNELL.

Linnæan Botanic Garden and Nurseries,

Flushing, New York.

WM. R. PRINCE & CO. offer for sale as follows:

Fruit and Ornamental Trees (including evergreens) of all kinds and sizes;
Shrubbery, Roses, Bulbous and Herbaceous Flowering Plants;
Dahlias, Tree and Herbaceous Paonies;
Greenhouse Plants of all kinds, including 300 splendid varieties of Camillias.

ALSO,

Stocks for ingrafting Fruit Trees;
Young Trees of all kinds suitable for Nurseries;
Fruit and Ornamental Tree and Shrub Seeds, including Evergreens;
Garden, Agricultural and Flower Seeds in any quantity, at lowest wholesale rates, of the present crop, and warranted of the first quality;
DIOSCOREA BATATAS, or Chinese Potato, the only American grown stock in the Union;
Figs, Olives, Pomegranates, Licorice, Tanner's Sumach, Madder, &c., in quantity for plantations;
Strawberries, Raspberries, Gooseberries, Currants and Blackberries of all the superior varieties.

This establishment comprises the most extensive collection in the Union.

Priced Catalogues at the lowest rates will be sent to applicants.

N. B.—Apple, Pear, Peach, Plum, Cherry, Quince, Almond, Prune, Apricot and other Fruit Seeds in any quantity. v6-5

Pioneer Nursery.

THE undersigned, proprietor of this now well established Nursery, to which was awarded the First Premium by the State Agricultural Society at its last Annual Fair, announces to his friends and patrons that he is prepared to offer them, the present season, a collection of Fruit and Ornamental Trees equal to any in the country, and far superior to any heretofore offered.

Having had in bearing last year, forty-seven kinds of Apples, and having in bearing the present year, about thirty-five varieties of Peaches, added to the knowledge we have acquired by comparing them with other varieties grown in various localities, we have been enabled to ascertain with certainty what kinds are worthy of culture, and such varieties only do we offer to the public the present season.

We call your attention particularly to our Seedling Peach, named by the Academy of Natural Sciences, "Myers' Rareripe," which we offer this season for the first time. The following certificate will speak for itself:

ALAMEDA, July 25th, 1856.

The subscribers having seen and eaten of the new variety of Peach grown by A. H. Myers, in his "Pioneer Nursery," Alameda, and by the Academy of Natural Sciences of San Francisco named "Myers' Rareripe," do cordially and unhesitatingly pronounce it a most valuable acquisition to the Pomology of our State, in regard both to its early ripening, and its melting, luscious qualities, being in these respects superior to any variety of Peach that we have yet met with on this coast.

George Lee, Lee's Garden, Oakland.
Henry Gibbons, M. D.
N. W. Palmer, firm of Sonntag & Co., Horticulturists.
T. J. Nevins, Amateur Gardener.
A. M. Crane, County Judge.
Wm. Sherman.

We speak to our friends and patrons thus early, that they may be apprised of our ability to supply them with all the desirable varieties of Fruits, and thus save the trouble and expense of sending out of the country for Trees; and we can assure them that time and money will be saved by giving us a call.

Our stock embraces—

40,000 Apple Trees, forty varieties, one, two and three years old;	
30,000 Peach Trees, in bud, best varieties;	
4,000 Peach Trees, two years old,	"
1,000 Pear Trees,	"
1,000 Cherry Trees,	"
1,000 Plum Trees,	"
1,000 Apricot Trees,	"
1,000 Nectarine Trees.	"

Also, Almond, Fig and Quince Trees;

25,000 Currant Bushes, with a sprinkling of everything rich and rare, usually found in a well regulated Nursery.

We particularly invite our citizens to our Nursery and examine for themselves before purchasing elsewhere. Information respecting the best varieties of fruits, and the planting and pruning of them cheerfully rendered.

A. H. MYERS,
v6-19 3m Pioneer Nursery, Town of Alameda, Alameda Co.

Smith's Pomological Gardens
AND
NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast.

Care and experience in selecting and propagating varieties are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear,
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of extra size Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for beauty and beauty we challenge comparison.

GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

☞ Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, offering *for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

WIRE FENCE,

FOR

Farms, Highways, Railroads, Cemeteries, Gardens, &c.

THE results of experience and the theories of science all attest that this mode of fence is superior to any heretofore in use, in economy, strength, closeness, elegance, portability and durability.

This fence is varnished with asphaltum varnish, which protects it from rust, and imparts to it a beautiful black color. It is perfectly secure as a barrier against farm stock; does not catch the wind; indestructible by fire or freshet; does not confine the heat, but admits freely the solar rays; does not occupy the soil, or harbor vermin, as stone walls and quickset hedges do; requires no repair, save a coating of varnish once in four or five years, and possesses sufficient elasticity to enable it, without the least injury, to experience that expansion by the heat of summer, and that contraction by the cold of winter, which have been so fatal to other modes of iron fence.

Each roll contains Twenty Rods, sixteen and a-half feet per rod. The fence is secured to the posts by staples (hook-headed screws); one staple over each lateral wire, at each post. The posts are of the usual strength, and are of wood, though they may be of iron or stone; they are set ten feet apart; and no rails are required.

The following kinds of this fence are most in use; and the prices annexed are the retail cash prices:

No. 1, 37½ feet high, 3 inch mesh, 4 lateral wires of No. 10 wire, body of No. 14 wire, $2 00 per rod.
No. 2, 37½ feet high, 3 inch mesh, 2 lateral wires of No. 10 wire, body No. 14 wire, $1 75.
No. 3, 23½ feet high, 3 inch mesh, 3 lateral wires of No. 10 wire, body of No. 14 wire, $1 50.
No. 4, 23½ feet high, 3 inch mesh, 2 lateral wires of No. 10 wire, body of No. 14 wire, $1 37½.
No. 5, 14½ feet high, 3 inch mesh, 2 lateral wires of No. 12 body of No. 15 wire, $1 75.
No. 6, 37½ feet high, 6 inch mesh, 4 lateral wires of No. 10 wire, body of No. 12 wire, $1 25.
No. 7, 37½ feet high, 6 inch mesh, 2 lateral wires of No. 10 wire, body of No. 12 wire, $1.
No. 8, Extra, 37½ feet high, 6 inch mesh, 4 lateral wires of No. 8 wire, body of No. 11 wire, $1 50.

Nos. 1, 2, 3, 4 and 5 are most used for Gardens, Cemeteries, Trellises, and other places where beauty is the quality most desired. Nos. 6 and 7, and No. 6 Extra, are best adapted for Farms, Railroads, Highways, and for other purposes where strength and efficiency are the most necessary qualities.

L. P. & W. F. DODGE'S DOUBLE ACTING PUMP.

(Patented June 7th, 1853.)

THESE Pumps are double acting, and combine both the Suction and Force Principles. The Pistons are of the best bell metal composition, making them available for use in either hot or cold liquids.

The Cylinder is without divisions or chambers, has no valves at the eduction port, and is bored out perfectly true and smooth. From the construction of the cylinder and water passages, the pistons require no packing, being fitted perfectly to the cylinder. Two important evils in Pumps generally, are thus overcome—viz: the amount of power required to work them, and the wear of the packing. The cylinder and pistons being perfectly true and smooth, it naturally follows that there should be less friction, and, consequently, less wear, than in pumps generally.

The water enters the cylinder upon its side, at each end alternately, passes through the piston heads, and is discharged through the round air-vessel in the center of the pump. These pistons are each furnished with a valve, connected in such a manner that both must operate simultaneously, one valve opening at the precise moment the other closes; consequently these pumps may be run at higher speed than pumps generally.

These pumps have received numerous Medals, Diplomas and commendatory notices from various State and and County Fairs, including Medal and Diploma at the Crystal Palace Exhibition in New York.

The power of a single individual applied to the size usually furnished for family use, is sufficient to draw water from a well twenty-five feet deep, and throw it upwards of fifty feet from a hose-pipe, rendering it a very efficient FIRE ENGINE, ready for use at any moment.

Circulars containing full information relative to size, prices, &c, may be obtained by addressing the

FIRST PREMIUM AGAIN!

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,

SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

J. L. POLHEMUS DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

N. B.—Prices to suit the times v5-14 3m

MEDICINES, &c.

FOR THE REMOVAL AND PERMANENT CURE OF

All Diseases arising from an Impure State of the Blood or Habit of the System.

In this preparation are strongly concentrated all the medicinal properties of Sarsaparilla, combined with the most effectual aids, the most salutary productions, the most potent simples of the vegetable kingdom; and the combination is such that one modifies and improves the other, producing a compound differing entirely in its character and properties from any other preparation, and unrivalled in its operation on the system when laboring under disease. It has been so fully tested, not only by patients themselves, but also by physicians, that it has received their unqualified recommendations and the approbation of the public; and has established on its own merits a reputation for VALUE and EFFICACY far superior to the various compounds bearing the name of Sarsaparilla.

From the Army.

MONTEREY, CAL., January 18, 1850.

MESSRS. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefited as I have been. I arrived here by the overland route, about the first of October last. A few days after I was attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely.

With high regards, yours, &c.,
J. H. MILLER, Lieut. U. S. A.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists and Chemists, 100 Fulton-street, corner of William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

CLOVE ANODYNE

TOOTHACHE DROPS.

Complain no more of Aching Teeth.

These Drops have been extensively used by thousands, whose experience has proved that the Anodyne will give immediate and permanent relief after the failure of every other remedy. It is pleasant to the taste and smell, and a few applications will entirely remove the pain and soreness from a decayed tooth, so that it may be filled and rendered as useful as ever. When the pain proceeds from the face, or from the gums around a tooth apparently sound, this Anodyne will give a speedy relief by rubbing a few drops on the part affected.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, No. 100 Fulton-street, corner William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v6-21 3m

From the East.

The P. M. S. Co.'s steamer Golden Gate, Com. Whiting, arrived Thursday morning, fourteen days from Panama, with dates from New York to December 21st, and 564 passengers.

NEWS SUMMARY.

Congressional.—Not much business of importance has been done in Congress as yet. In the House, on the 12th, Mr. Brown, from the Joint Committee, reported a bill in favor of contracting with Commodore Vanderbilt to carry the mail between New York and Liverpool, at $16,600 the round trip. A few days afterward, the proprietors of the Collins Line asked to be relieved from their contract. A resolution was introduced by Etheridge, of Tennessee, denouncing in the severest terms all attempts to re-open the African slave trade. This resolution was adopted, ayes 152, nays 57—including the two California members.

In the Senate, Mr. Houston has given notice of a bill providing for a semi-weekly overland mail between the Mississippi and San Francisco. Mr. Weller gave notice on Wednesday, that he should call up the Pacific Railroad bill immediately after the holidays.

Mr. Whitfield, the pro-slavery delegate to Congress from Kansas, has been admitted to a seat in the House, after a protracted struggle.

It is said that a bill providing for the extinguishment of the possessory rights of the Hudson's Bay and Puget Sound companies in the United States has been matured in committee. A quarter of a million dollars will be required to effect this object. The Senate, among others, has confirmed the appointments of James O. Harrison and Wm. Spencer, respectively, as Chief Justice and Marshal of Kansas, in place of Lecompte and Donelson.

The President, on the 17th, sent to the Senate for ratification Mr. Dallas' new treaty with Great Britain on the Central American question.

Walker Aided.—The steamer Texas, from Nicaragua, arrived at New Orleans on the 12th, with the California mails and passengers of the 20th ult., and the Tennessee, also from Nicaragua, arrived at New York on the 15th. These steamers brought the news of the critical position of Walker. A regiment of five hundred men has, it is said, already been enlisted in the city of New York for Nicaragua. Col. Titus, of Kansas notoriety, arrived at St. Louis on Tuesday, with one hundred recruits en route for the same destination. Walker's friends in New Orleans are redoubling their efforts to send him relief. On the evening of the 20th, a mass meeting was held at the Broadway Tabernacle, New York, to sympathise with, and send material aid to Walker. A collection was made, and there was received, in all, $1,307. The committee was also notified that 1000 rifles were ready to be placed at their service; that the St. Nicholas Hotel would send by the steamer, on Wednesday, 100 barrels of bread, and the Metropolitan Hotel 5000 pounds of bacon, for the use of the army. It was also announced by Gen. Wheat that 2000 volunteers were ready to start from New Orleans, and that hundreds would leave New York on Wednesday.

A Washington dispatch states that orders have been sent to the government officers in New York to stop all shipments of men, arms and provisions to Gen. Walker.

Garrison Matters.—The President of the United States has issued an order for the arrest of Cornelius K. Garrison, Charles Morgan and Gen. Wm. Walker, to answer the Accessory Transit Company in a plea of trespass, for converting and disposing of the goods and chattels of the company to the value of one million dollars, and also a further sum of one million dollars damages for interrupting their business.

Another suit for a receivership was commenced, on the 20th, in the New York Supreme Court against the Accessory Transit Company, in which the plaintiffs allege that they have a claim against the company for nearly twenty-one thousand dollars. They asked also for the sale of the steamships belonging to the line. The case was adjourned to Friday, the 26th.

The Tehuantepec Route.—Earnest measures have been adopted for the opening of the Tehuantepec route to the Jaupi. A carriage road will be opened across the Isthmus, and will be finished, it is said, by the first of February. Coaches and other material are already contracted for, and are expected to be shipped from New York by the first of January. Commodore Vanderbilt, it is said, is going to New Orleans with one of his steamers to make further arrangements.

Kansas.—Affairs in Kansas remain quiet. Governor Geary's course begins to elicit general commendation in the territory. Judge Lecompte and Marshal Donaldson have been removed, and Jas. O. Harrison, of Kentucky, appointed in the place of the former, and William Spencer in the place of the latter. The land sales were proceeding with great activity.

Huntington, the forger, was on trial. His counsel have created considerable surprise from their conduct. They concede the fact of his guilt—acknowledge everything in the indictment—exaggerate to the greatest possible extent the criminal acts of their client, and swell the amount of his forged paper to the incredible sum of twenty millions of dollars—for the purpose of setting up a plea of insanity!

Thomas F. Meagher, the Irish exile, sent a challenge to Henry J Raymond, editor of the New York Daily Times. The affair grew out of an article in the Times, in which Mr Meagher was charged, by implication, with breaking his parole in Australia. The matter was settled without a resort to arms.

Edwin Booth has closed a highly successful engagement in Washington City, by an overflowing complimentary benefit on the 19th ult.

The Southern Commercial Convention held a few days session lately at Savannah. Resolutions in favor of a Pacific Railroad were adopted, as was also one recommending the transportation of the mails between New Orleans and California by the proposed Tehauntepec route. The subject of the re-opening of the African slave trade was voted down by a large majority.

The United States receiving ship Union, at anchor off the Navy Yard, Philadelphia, was so badly cut by thin, floating ice that she sunk, in about thirty feet of water. The U. S. sloop-of-war Preble was at anchor close by, and succeeded in saving the stores, ammunition and all hands. The Union is a very old vessel, and has been unseaworthy for many years. She will be raised and broken up.

The Supreme Court of Missouri has reversed and remanded the case of the City of St. Louis against J. A. Alexander, better known as the Ohio and Mississippi Railroad injunction case.

Political circles are still agitating the selection of Mr. Buchanan's cabinet.

The jury in the case of Baker, the principal in the Poole tragedy, have disagreed. They stood six for manslaughter in the third degree, and six for acquittal.

Great excitement exists in Tennessee, Kentucky and Virginia, on account of a meditated insurrection of the slaves, which was fixed for Christmas eve. Numerous arrests have been made, and several negroes and one or two white men hung, and others whipped.

A letter from a large mine owner residing in Birmingham, England, to a townsman of ours, dated November 28, states that the rise in the price of copper has been at the unprecedented rate of £9 10s. sterling per ton, and that an additional rise of £10 was expected in a few days. —[Columbia South Carolinian.

Albert Pike, of Arkansas, has received a fee of $160,000 in an important law suit. Since that time he has announced his intention of retiring from the bar altogether, as his fortune is now sufficient to enable him to live at ease.

A blind hand-organist in Rochester, who went about the streets of the city with a puny and pale little daughter, has just fallen heir to an estate in Wales, estimated to be worth a million of dollars. A prominent legal firm in Rochester is now engaged in making out the necessary papers.

Peter Nason, a colored man, now a resident of Woodstock, Vermont, has reached the extraordinary age of 125 years! and is doubtless the oldest living man in this country. His history has been traced out by N. Haskell, Esq., town clerk of Woodstock, and it appears he was born two years before Washington—was forty-six years old at the date of the Declaration of Independence, and long before the second war with Great Britain broke out, he had passed the scriptural limit of life.

The Georgia papers record the death, in Dooly county, in that State, of Mr. Joseph Calhoun, at the age of one hundred years and ten months! He was a native of Edgecomb, N. C. He saw both the beginning and close of the Revolutionary War, in which he participated. He was under the command of General Gaster, at the battle of Camsden, and fought under General Greene, at Guilford, C. H.

Mrs. Eleanor Hanna died in the city of New York on the 19th ult., aged 102 years, fifty of which she passed in that city.

Seamen are so scarce at Baltimore that it is necessary for the owners or captains of vessels to employ an officer to guard them until the vessel sails, lest they desert after shipping and getting their advance pay. Some of the men are of the most abandoned character, and become so mutinous that it is necessary to put them in irons.

Rain in San Jose Valley.—We have examined many places in this valley, and it is not so well fitted for planting as some other valleys. There does not seem to have been the average amount of rain in this valley. San Jose, or rather Santa Clara valley, is now suffering for heavy rains and the usual overflow, in order to destroy the gophers and squirrels, which seem to infest this valley almost like the locusts of Egypt. In no part of the State do we believe these animals are so numerous or severe in their depredations. They eat off two years old fruit trees, and make sad havoc in many ways. Nothing but the heavy rains and a temporary flood can check them.

HOTELS, &c.

To be a Man in this World!

YOU MUST OBSERVE

TWO VERY IMPORTANT MAXIMS!!

FIRST, THAT

"Economy is the only sure Road to Wealth;"

SECOND, THAT

"Early to Bed and early to Rise."

You all know what that does for a man.

By the by, speaking of Economy, Beds, Early Rising, &c., reminds us of those magnificent **Patent French Spring Beds,**

REMOVAL.

Mercantile Library Association.

THE ROOMS OF THE ASSOCIATION, being those formerly occupied by the Pacific Club, on the corner of Montgomery and Jackson streets, over the Banking House of Messrs. Pioche, Bayerque & Co., will be thrown open to the public on Monday next (15th of December instant). The rapidly increasing extent of the Library and the constant accession of members, rendered it imperative that more spacious apartments should be secured for the purposes of the Institution. The new rooms will afford ample accommodations and will be fitted up with every regard to comfort and convenience. A GALLERY OF FINE ARTS will constitute a new and attractive feature in the new rooms, and the attention of citizens and others having Paintings and other Works of Art in their possession, is respectfully called thereto; all such objects will be received and receipted for; they will be conspicuously displayed, and will be at all times subject to the order of the depositors. To artists especially this will afford a favorable opportunity to exhibit their works; and the Directors cordially invite them to avail themselves of the advantages thus offered.

Books of Reference, Maps, Charts and Manuscripts would be gladly received on the same conditions; also, Natural Curiosities and Specimens for the formation of a Cabinet.

In order to allow proper time for the removal and re-arrangement, the Library and Reading will be closed from this date, until Monday, December 15th. v6-24

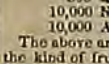
BRADSHAW & CO.,

Corner of California and Battery streets,

v4-26 San Francisco.

Commercial Nursery,

Three-Quarters of a Mile East of the City of San Jose.



THE Proprietors of this Nursery, having received the award of the

FIRST PREMIUM

OF THE

STATE SOCIETY

the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of

FRUIT AND ORNAMENTAL TREES,

For the Trade of 1856 and 1857,

that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.

Our Stock consists of

One Hundred Thousand Trees,

FROM FOUR TO ELEVEN FEET IN HIGHT.

Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs;
Gooseberries, Raspberries, Strawberries;

TOGETHER WITH

Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

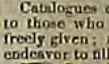
☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.

v6-13 3m SMITH & WINCHELL.

Briggs' Nursery,

Three Miles from Marysville, on Great Road.



THE Proprietor of this extensive Nursery would invite those who intend to establish Orchards the coming Autumn to the following stock of Trees, which will be ready for sale:

70,000 Extra Peach Trees, from 5 to 6 feet;
100,000 Dormant Buds;
6,000 Full size Plum, of best kinds;
10,000 Dormant Buds;
5,000 Cherry Trees, good size—best sorts
15,000 Pear, of the rarest kind only;
5,000 Apple Trees, ready for orchard;
500 Quince, of very choice kinds;
10,000 Nectarine Trees, of extra size;
10,000 Apricot " " "

The above are grown under the eye of the undersigned, and the kind of fruit he has exhibited the present year is the best guarantee that they are indeed fruit trees that will bear.

The proprietor of this Nursery will receive from the East this Autumn an invoice of some

Fifty Thousand Trees.

These will be of extra *sorts*, and such as the proprietor will guarantee to his patrons.

The proprietor being desirous of encouraging others to plant Orchards of fine Fruit Trees, will offer the following inducements:

Peach Trees, No. 1, named first.....$1 50 each.
" " Dormant buds.....50 "
Plum " full size.....2 50 "
" " Dormant buds.....1 25 "
Cherry " full size.....2 50 "
Pear " " " .....1 50 "
Apple " " " .....1 87 "
Quince " " " .....1 50 "
Nectarines.....1 50 "
Apricots.....1 50 "

All the above trees will be warranted true, as the proprietor is more desirous to have his customers succeed and do well, than merely to sell his trees.

☞ Purchasers of over $1000 will receive a discount of twenty per cent.

The French Garden,

Near the Cottage, on the Santa Clara Road.

A. DELMAS.....PROPRIETOR.

GRAPE VINES! GRAPE VINES!!

THE Proprietor of these extensive grounds would take pleasure in calling the attention of the public to the very great collection of Grape Vines, which he will offer the present season.

The Fruit from this Garden was exhibited at the late State Fair, and received the Diploma of the Society. The White Wine made from this Vineyard received the First Premium of the State Society. This Vineyard also obtained the First Premium for the Best Vineyard of Foreign Grapes, the present year.

The Proprietor will offer the present season his grand collection of Eighty One Varieties. Among this splendid assortment will be found—

Black Hamburg;
Chasselas of Fontainbleau;
Chasselas of Frontignac;
Cannon Hall Muscat;
Muscat of Alexandria;
Charlesworth's Tokay;
Syrian; Black July;
Golden Chasselas;

Together with every variety of the Grape known and approved.

The undersigned is confident that this collection is the largest and most complete in the country, and to this the attention of the public is particularly invited.

The subscriber would also offer—

APPLE, PEAR, PLUM, PEACH, APRICOT, NECTARINE, and other Fruit Trees.

—Also,—

RASPBERRY, CURRANT AND GOOSEBERRY TREES,

In good assortment.

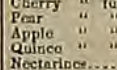
Catalogues of all the varieties grown in this Garden will be sent to all who desire them, by addressing letters to the proprietor.

All orders will be answered promptly, and Trees and Vines carefully packed for any place in the country.

A. DELMAS,

v6-13 4m French Gardens, San Jose.

San Jose Nursery.



THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of

FRUIT AND ORNAMENTAL TREES,

ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.

Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 69 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.

The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer

Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.

In each of the above the very best and most approved varieties.

The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—

Black and Honey Locust;
Chinese Ailanthus, Catalpas.

—Also,—

20,000 Mulberry Trees,

All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!

In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.

The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.

Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.

SEEDS, &c.

CHINESE SUGAR CANE,

OR,

SORGHO SUCRE.

PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 30 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,

W. P. ORME, Atlanta, Georgia.

ATLANTA, November 7, 1856. v6-22

WINTER—A BALLAD.

In Winter he sat on his icy throne,
Away in the distant North,
And he thought, that as Christmas was past and gone,
It was time to sally forth.

He called on the Hail, and he called on the Snow,
And he called on the frosty Wind,
And he told them, 'twas time for them all to go,
And never to look behind;

For he was resolved to make use of his time,
Before he got stiff and old,
And march his troops to a distant clime,
And conquer the Land of Gold!

He looked on the Lakes as he passed along,
And their waters were turned to stone,
For his Gorgon-glance was so powerfully strong,
They were spell-bound every one.

He saw that Boston could never be lost,
Nor a foot of the Granite State;
So he left in command old Major Frost,
As he did not choose to wait.

At proud New York he cast a look,
And the Hudson refused to flow,
And the belles and the dandies shivered and shook,
At the sight of General Snow.

And he traveled on, and he traveled far,
And he crossed the desert land,
For none could make what he could not mar,
Nor resist his stern command.

From Nevada he gazed on our pleasant land,
As it lay before his eyes,
And he said—"Let us go, my gallant band,
And seize this glorious prize."

But the generous Rain began to fall,
And the Grass began to spring,
And the Flower-buds all came forth at the call
Of the Birds which commenced to sing.

Old Winter he saw 'twas of no avail,
And concluded he would not stay;
So he called on the Storm, and the Snow, and the Hail,
And slept, and went away.

For a thousand years, the stern old King,
In our valleys hath never been seen,
He has yielded his claim to his daughter Spring—
God save our noble Queen!

AGRICOLA.

Pruning Grape Vines in Los Angeles.

We find some interesting paragraphs on this subject, by the Los Angeles correspondent of the Bulletin, under date of January 9. He says:

"Vineyard people have commenced pruning, though yet rather early. The month of February is generally thought to be the most favorable time for the health of the vine. In the *training* of vineyards, the pruning must be done with great care—indeed it becomes an *art*, that is only acquired by much experience; and is, I believe, considered in France, Spain and Italy. *There*, a vine-dresser, like a surgeon, must understand the business. In the East, where they have rains during the summer, it is necessary to train vines high to keep the fruit off the ground. In California, where the dry season prevails until after the grapes are matured, it is better, in many respects, to train low, near the ground. This plan requires far less trouble; it is also cheaper, and the vine is stronger and bears better fruit. In planting a young vineyard, for the first two or three years after it is planted, but one stalk should be left for each vine, and that allowed to grow from a foot to a foot and a half high from the ground. *Then*, from two to eight branches or stalks (according to the thriftiness of the vine) may be left with two healthy buds on each. These buds send out branches, each of which gives a bunch of grapes. Cut off outside branches—"train in"—leave generally those nearest the old stalk—"cut back"—and thus the vine will occupy little space, be more comely, and being always compact, will grow with more vigor than if left to spread. There are some few vineyards here planted in old times, the vines of which are from four to six feet high; but they are ill-shapen and difficult to work among. All the vineyards planted in late years are trained *low*. The branches cut off are generally carried outside and burned, when not needed for planting new vineyards.

Dr. Osbourne and Mr. Keller, of this place, have several times sent samples of Los Angeles grapes to various parties in the Atlantic States, and among others to the New York Agricultural Society, and the Patent Office at Washington; and have received very flattering letters in reply. They seem astonished in the East, at the excellence of our grapes, both in flavor and in the magnificent proportions of the clusters.

THE SUN FLOWER.—It is stated that near Beaufort, S. C., a crop is about to be gathered of four acres of sun flowers. The seed will be used for oil, and to feed cattle and poultry, as in the south of France; but the chief object is to obtain the fiber of the stalks for paper making. If the cultivation succeeds, it is expected to supply abundant materials for fine writing and printing paper, as well as fine and coarse for paper hangings.

Hints for Country Houses.

THE engraving which we present to our readers is the view of the interesting old building of the English cottage style, known as the birthplace of the celebrated SIR WALTER RALEIGH, and called the "Hayes' Farm," situated in Devonshire, England, and is to us doubly interesting as connected with the name of the distinguished nobleman, whose name was associated with the early history of America.

HAYES FARM, DEVONSHIRE—THE BIRTHPLACE OF SIR WALTER RALEIGH.

This specimen of Architecture is a fair specimen of the style of Country Houses now scattered through the rural districts of England. It is plain and simple in style, the materials of the most solid and durable character, the dimensions large, and the whole plan and style having reference to substantial comfort.

Referring to it as a whole, it appears a far better style to copy, than many of the fancy cottages and villas that are so much in fashion at the present time.

This specimen of a country house is not faultless, but its general expression is that of real comfort and of great durability. This style makes no pretension to beauty which it does not fulfill, and what it aims at it fulfills.

There is a simplicity and solidity in the rough-cut stone walls, with their gable windows and ample porch. This style can be so planned as to make the rooms to suit all wants. To this present style there could be added a veranda, and it would be difficult to plan a more convenient residence. We trust there will be an increased love of rural architecture, until our whole land shall be dotted over with rural homes.

[For the California Farmer.]

We Should Manufacture More.

MR. EDITOR: This, you claim, is a fast country. That this is an age of improvement, with you, sir, I agree. The history of our State is but of yesterday. Her golden dreams are but now being realized. Our State, but a few years since was spoken of as the golden State; but now as abounding in other sources of wealth. Her productive soil has invited the enterprising laborer to her feast. The mechanic, the manufacturer, too, are here no longer curiosities. Well may Californians be pleased with their own energy, patience and untiring perseverance. A brief time since, no grist mills, no tanneries—now they abound. The same could be said of many other branches of industry that are now reaping for their enterprising owners ample returns for their investments.

One branch, more in particular, is much needed at the present. I mean woolen factories, which I believe can be carried on with the greatest success. My reasons are that we have (although there are many who deny it,) cheap labor; the prices of many kinds of machinery are at very reasonable figures; water power is handy; raw material both cheap and abundant (less than one-half the price in the Atlantic States). And, I repeat it, we have cheap labor, for who has not heard, in mining, agricultural and city loafing localities, the almost universal complaint—"can't get employment; would rather work for my board than wait here for water, or for work on that new brick store of Jake Oldensniders, or for plowing time to come, so that I can get to drive a yoke of whoa-haws, or a span of long ears."

Sir, I am of the opinion that a sufficient number of operatives could be found in the State, to manufacture all the raw material that we are obliged to ship out of the State, and at a figure not much above the low price in the States, and, save the delay and interest on capital, cost of carriage both ways, insurance, &c., thus giving an opportunity for a large profit to dealers in this State.

Some may say the tendency would be to enslave the poor operative. This is a free country—those that have no shoes can go without. So any one has a right to labor who prefers to be employed, instead of begging whisky over a counter, rather than work for cheap wages at a useful employment, good grub, steady pay; and, as Webster says, labor makes man happy, so whilst making an honest living for himself, the tailor thereby makes himself, his employer, the wool-grower and the consumer all the happier for his industry. Then, in case of war or other mishap, they could wear their own jackets as they now can wear their own boots, and eat their own bread and meat.

Who is the enterprising manufacturer that will pitch in and make his pile? M.

—

Above we have a hint for the wise ones, for the thoughtful and reflecting. Here we have suggestions for our Legislators, to whom we look for aid in developing the vast resources of our noble State, so that we can become a manufacturing State. In all the departments of woolen manufactures we have no doubt of success—for no country in the world can boast of greater or better water privileges, or none that can erect woolen factories at less cost, saving the machinery. When erected on our mountain streams, we have plenty of wood for steam furnaces for heating and drying, or to use for steam power altogether; and surely we have the power to obtain the raw material cheaper than any other country. Soon we shall have fine wool—aye, the very finest, for already the beginnings are with us, as will be seen by our notices of new varieties of sheep recently introduced (see notice), and history gives no parallel to California in the rapid increase of flocks. Our climate is better adapted for sheep raising and wool growing than any other portion of the earth.

Our correspondent has touched the right chord. Better is it for the loafers of our cities or the mining or agricultural districts to go to work at one dollar per day than to remain idle; and if they won't work, the Scriptures say, they shan't eat; and we say, emphatically, California has suffered enough already by the *drones*—there are even now thousands that are living upon their friends, that never do a day's work. Build factories! Give such men a chance to work, and, then, if they *will not work*, send them away out of the hive, as the *bees* do—they have no drones, and we should imitate them, if we would have our hive well stored when winter comes. Much as we deprecate fillibustering expeditions, we acknowledge they have done some good—and if we cannot get rid of loafers in any other way, we pray that new countries may be discovered, where such *adventurers* may go to seek a fortune that can be won without labor, if such a thing is possible. California wants working men only for her citizens.

A Voice from France.

THE annexed letter from the celebrated house of Vilmorin, Andrieux & Co., will be read we are sure with interest. It will show with what interest others look on our famed land, and on everything which emanates from her rich soil, or from the genius of her people. It will be seen also that even in sunny France, where we have supposed every product could be successfully reared, some of the articles we have with us of spontaneous growth, cannot be grown.

We commend the letter to our readers, and hope it will awaken them to the value of the blessings we enjoy:

PARIS, 24th Nov., 1856.

GENTLEMEN: Your favors of the 18th Oct., '55, and 4th January last, have duly come to hand, and we beg leave to return our best thanks for the sundry articles you had the kindness to send us, and which all arrived safely.

Your specimens of wheat, barley, etc., are very fine, and prove the fertility of your climate and soil, we have already tried your China and Castor Oil Beans, but our climate does not seem to suit them, and the grains don't ripen with us. We should like very much to receive seeds of your evergreen trees, which would be most valuable to us.

We thank you also for your sending us very regularly your paper, which we find most valuable, and are glad to see that you spare no endeavour to prove to your countrymen that the real destiny of California lies in the superiority of its Agricultural products, more than in the mining system. We are quite convinced that laboring hands in working the soil, in plowing and sowing, will obtain more profit than in searching after gold. Indeed, a great deal of your countrymen think like we do, and we don't doubt but a few years will show California on the highest pitch of agricultural improvement.

We also see in your paper that some of your farmers have tried this year the "Holcus Saccharatus," the Chinese Sugar Cane. This very valuable plant has been introduced into Europe, and into France first, by the French Consul in China, M. de Montigny, and has been cultivated with us already since some years, and with very much success. The quantity of sugar its juice contains is very important, but its produce in alcohol is still more important, and it would perhaps prove more advantageous to use it in the latter way. Besides these two qualities the *Holcus Saccharatus* proves to be a most abundant forage, both for cattle and horses; the seeds too, are not of little value for poultry, and even for fattening hogs. The shell of the grains produces a very fine and most durable red color. We should think that your climate would be very favorable to this plant, and shall be glad to learn the result of the experiments your readers may have made.

We regret not to be able to send you more subscribers to your paper, though we recommend it to our friends as very interesting, and full of useful knowledge; but as the English language is not much cultivated in France, it is not easy to find among our farmers people to whom it would be of real use.

We can send you, if you like it, several copies of our price lists for distribution.

We are gentlemen, yours most obediently,
VILMORIN, ANDRIEUX & Co.

Will High Prices Continue?

THE Prairie Farmer discusses this question as follows:

To the farmer there is no question, which for the moment is so important, on which he feels with so much force, as the one at the head of this article. All his calculations, all his expenditures for improvements during the year to come, depend upon the prices which he shall receive for his staples. For several years past the price of agricultural products has been advancing and in nearly the same ratio has that of manufactured articles decreased.

Let us now proceed to inquire into the cause of the high prices of agricultural products, as from the investigation we shall be able to draw some tolerably certain conclusions relative to the future. To aid us in illustrating this subject, we have compiled this table of figures. The first column shows the production for 1840; the second column the same for 1850; the third shows what the amount *should have been* to have corresponded with the rate of increase of population:

	1840	1850	Ought to have been.
Wheat,	84,823,272	100,485,944	115,485,944
Corn,	377,531,875	592,071,104	516,071,104
Rye,	18,645,507	14,188,913	25,188,813
Oats,	123,071,341	146,584,179	166,584,179
Hay,	10,248,108	13,838,642	Kept pace with population.

By this table it will be observed that there is a deficiency in every thing except Indian corn, which has increased in a greater ratio than the population; and hay, which has increased in the same ratio as the population. It is supposed that 15,000,000 bushels of corn are consumed annually in the manufacture of whisky. But let us illustrate this subject a little further. The population of the United States was in 1840, 17,069,453; in 1850, 23,191,866; an increase in 10 years of 36 per cent. The increase of wheat during the same period was only 20 per cent. The increase of oats during the same period was 20 per cent.; Indian corn, during same period, 57 per cent., or 21 per cent., over the rate of increase of population. During the same period rye decreased nearly four and a half million bushels, in actual production.

Whatever may be the conclusions drawn from the above facts, one thing is apparent, viz: that vegetable food has not increased in proportion to the increase in population, but has rather fallen behind. Maize is the only crop which advances faster than our rapidly increasing population. Wheat is mainly used for bread and we are exporting largely of corn and corn meal. Will, then, high prices continue?

We think *they must!* For aside from the growing demand at home, arising from the increase of population over production, which will continue to be the case for ten years to come, our *exports* of grain are continually on the increase. Are we not right then—are we not perfectly safe in reckoning upon the stability of present prices. We hazard the prediction that prices will *go up*, rather than down, although under the influences of momentary causes they may fall below the present standard, but not remain long down.

But again: The price of all kinds of animal food, has increased with the increase of the price of grain. The rise in price of meat, is perhaps the more remarkable.

	1840.	1850.	Ought to have been.
No. Cattle,	14,971,586	18378,907	20,178,907
No. Sheep,	19,311,374	21,723,220	26,223 220
No. Swine,	26,301,293	30,254,213	34,854,213

Now let us compare the ratio of increase of animals with that of the population; as above stated the latter is 36 per cent.; of cattle the ratio of increase is 24 per cent; of sheep the ratio of increase is 13 per cent.; of swine the ratio of increase is 15 per cent.

These facts are instructive; and they go far towards explaining the mystery of the high prices of grain, beef, pork, and mutton, which the farmer has enjoyed for the last few years. This state of things will continue until the prices range so high, and the demand for bread and meat becomes so great, that capital and labor will be drawn into the channel of agricultural production; until this is done we can see no permanent diminution of prices.

The immense internal improvements which have been in progress in all parts of the country, especially in the grain and meat producing States—and the ready returns which they offer to labor, have drawn thousands away from agricultural employments; and once in the harness and and disciplined to the work, they remain in it, and follow these works from point to point and from one locality to another.

There is one or two facts we have drawn from the above tables, to which we desire to call particular attention. While wheat, rye and oats; horses, cattle, sheep and swine have fallen off—*per man*—12 to 20 per cent. during the period from 1840 to 1850; Indian corn, during that time, increased at the rate of nearly *six per cent. per annum*—or a little more than 60 per cent. for the whole ten years. This is a prodigious increase. The crop of last year calculated on this ratio, must have been not far from 800,000,000 bushels! and at the same rate the crop for 1860 must run up to the enormous yield of one thousand million bushels! The foreign demand for corn is now so rapidly advancing, that we shall probably find a ready market for even this immense product. To give the reader some idea of the extent of the trade in corn at the present time—there were shipped from the single port of New York, from Jan. 1st to June 17th, this year, nearly thirty-five thousand barrels of corn meal and about two million bushels of corn—being an increase over the shipments of last year during the same period, of six thousand barrels of corn meal and three hundred thousand bushels of corn. We contemplate with no ordinary interest the portentous nature of these facts. The corn crop is one which is easily raised, and its culture may be pushed to an indefinite extent. It must therefore become the staple production of the northern and middle States. Our belief in this is fixed.

Besides the reasons already given to show that high prices will continue, we have to mention the constant increase in the exports of grain to European countries. For the first six months of 1855, the total number bushels of wheat sent from New York was 31 288; this year the total for the same time is 2,064,736 bushels. The shipments of rye for the last six months are over a million bushels, being greater than any previous year, in the history of the trade. In wheat flour the exports have been largely increased. There is also a great gain in certain kinds of meats. On the whole, farmers will be safe we think, in calculating on past average prices for their products of the present year. And in consequence of the drought, which has prevailed so extensively throughout many of the corn-growing States, this crop will be much diminished and the price will probably advance. Those who have old corn will lose nothing by holding on.

THE PRICE OF DEVONS IN DEVONSHIRE, ENGLAND.—The North Devon Journal, in speaking of a sale of twenty-four pure high-bred North Devon cattle sold by Mr. W. Hole, of Hannaford, says:

The first cow put up was sold at 15 guineas, the second at 20 guineas, the third at £25, the fourth at £23, the fifth £22, the sixth called Rosetta, which had gained a prize at Birmingham, and was commended at Leicester, went up to £30. She was pronounced a perfect model. The seventh and last, sold at £16. The foregoing were all in calf. These were succeeded by three heifers in calf, which were knocked down at £15, £19, and £16. Three yearling heifers sold at, respectively, £11 15s., £13, £15. Three steers, yearlings, went, one at £12 10., and the other two at £9 10s., each. The bulls sold. Rob Roy, at £22 10s.; Junius £20; Zeno, £11 10s., and Zeluco, £17. The bull calves made from £8 to £17. After the sale of Mr. Hole's cattle was concluded, two heifers and eight steers from the herd of Mr. George Burden, were brought to the hammer. They were very fine animals, and sold, the first heifer at £18, and the second £17; the steers averaged about £30 a pair.

The editor of the Journal apparently apologizing for the low price obtained for these animals, says, in speaking of the character of the persons who attended the sale, that Mr. Hole is extensively known as a careful breeder of North Devons, and having exhibited at the Royal and other agricultural societies, some animals of his having lately been bought for the Emperor of the French, it was expected that the sale would attract some of those purchasers of stock to whom purity of breed is above pecuniary considerations. This expectation, however, was not met, the persons attending consisting chiefly of the respectable yeoman of the district, with a few professional cattle-dealers. It was however soon evident that the purchasers present were not exclusively influenced by beauty of form or purity of breed in the animals to be sold, but by a strong regard to the quantity of beef, milk, etc., that they would yield.

BLACK HAWK.—The original Vermont Black Hawk horse, died at Bridgeport, Vt., on the 1st December, at David Hill's stable, it is reported. He was twenty-three years old.

Sonoma County.

The annexed communication we gladly publish as one of general interest, and feel very grateful for the interest our correspondent feels in the important work of making known the rich resources of this "Promised Land."

We know these valleys are fruitful beyond description, and we cheerfully give wings to the glowing yet truthful picture of these bright valleys among the mountains. We regret we have not more time to visit every part of the State and hold communion with those who are making the wilds "blossom like the rose." We will do so at an early day. We thank our friend for the hint to send our Farmer. We shall do so, and we will be grateful if our friends there will aid us in forwarding us a subscribers' club. We will try to deserve it. We believe our Farmer will respond promptly to every plan that tends to develope these sources of wealth and happiness. To our friend then we look for a goodly list for our new volume.

The Farmer will be found at friend Hedges, and we will hope to come and peep over the Hedges, and see how many good things he has. Our subscribers all will see by the columns of the Farmer that we feel deeply upon the unsettled condition of our titles, and we hope remedies will soon be had, and our country freed from this embarrassment, and rise to full prosperity.

—

Smith's Ranch, Bodega, Jan. 10, 1857.

Editors California Farmer: During a residence of seven years in California I have become acquainted with most of the prominent localities, north and south, the characteristics of which have been accurately noted in your excellent journal.

I do not, however, remember to have seen any special description of the southern portion of Sonoma county, lying between Petaluma and Russian river, and Santa Rosa and the coast, the peculiarities of which I think are sufficiently remarkable to justify a paragraph.

A stranger accustomed to the topography of other portions of the State, leaving Petaluma in the month of January (in one of the two excellent lines of stages for Bodega) is forcibly struck with what appears to be the strong contrast between the sterile appearance of the constant hills and the evidences of fertility furnished by the attested reports of the produce sent to market, from the Embarcadero.

The hills which appear like others on the coast, bleak and barren, have an exceedingly rich and productive soil to their very tops, and are in fact more esteemed than the valleys, for the crops they produce, and the fresh, luxuriant pasturage at all seasons of the year.

The chief article of export from this region, the past season, was potatoes, the superior quality of which is understood in the San Francisco market, where they command a much higher price than any others. From careful inquiry, I think it fair to presume there was at least 1500 acres planted the last year, yielding on an average, say five tons to the acre, which at 2½ cents per pound would produce 750,000 dollars from this item alone, to which if you add the crops of barley and oats, which were extensively and successfully cultivated, and the profits arising from live stock, which would perhaps compare in number and value with that of any district in the State of the same extent, and you have an aggregate of returns challenging comparison.

Wheat, in some portions, is considered somewhat precarious on account of the humidity of the climate, which renders it in some seasons liable to rust and smut.

The foregoing remarks apply generally to the country, from Petaluma to the Russian river, although somewhat diversified. In the neighborhood of Petaluma the hilly position yields an abundant crop of wild oats for hay and pasturage, while further on, this feature is replaced by the productive soil before alluded to.

The Embarcadero, some twenty miles from Petaluma and fifteen from Santa Rosa, affords to the intermediate country an economical and convenient means of transport in a few hours to San Francisco.

Last, though not the least important consideration, is the delightful climate, free from the extremes of heat and cold, being tempered by the sea breezes which exert a genial influence, both in summer and winter, and in the Russian river portion of it, which is free from frosts, it is presumed that all the varieties of fruit common to this climate can be successfully cultivated, although but little attention has yet been given to it, in consequence of the blighting influence of the uncertain tenure of land.

The traveler and transient inhabitant will find the great desideratum of a comfortable hotel in many places, and without meaning to be invidious I would mention that of the Messrs. Hedges', at Smith's Ranch, where the weary wanderer finds himself comfortably at home.

A serious drawback to these advantages is experienced here, as well as elsewhere in California, paralyzing every description of enterprise, in the uncertain titles of land, arising from the claims set up under Spanish grants, which cover (in many instances double) the soil of the whole country, rendering it difficult to either lease or purchase.

The *Settler Bill*, which occupied so much of the time of the last session of the Legislature, is artfully represented by the grant holder as unconstitutional and void. Would it not be desirable that this point should be decided by our Supreme Court, so that cultivators depending upon its judicious provisions may know what to expect? and, if void, that its place may be supplied by the present Legislature?

I think there are many enterprising agriculturists in this region who would appreciate, and readily subscribe for the California Farmer, if they saw it, and I would recommend you to send a copy to Mr. N. Hedges, P. M., Smith's Ranch, Sonoma, who has assured me he would take an interest in promoting its circulation.

Respectfully yours,
Lansing Tooker.

Improvement of the Soil.

We make the annexed extract from a work just received by us from the publishers, C. M. Saxton & Co., edited by W. N. White, Esq. The climate of California is so similar to that of the district where the book was intended for circulation, that we copy the following, believing it equally appropriate for our own climate:

A soil may be improved in *texture* by the addition of any necessary constituents for the growth of plants which may be wanting.

The *texture* of a *clayey soil* can be rendered more pervious by thorough draining, deep trenching, and by the application of sand, ashes, lime and unfermented manure. So much sand is required to produce any perceptible effect in improving a heavy clay, that it is the most expensive mode of improvement. Ashes and lime both have the property of rendering heavy soils lighter and light soils more tenacious, and both more productive, especially for potatoes, turnips, beets and peas, which delight in calcareous soils. In cold climates, plowing clay lands deeply in the fall, and exposing them to the action of the winter's frost, is very beneficial, but in sections where there is little frost and abundant and heavy rains, it is worse than useless. Turning under coarse vegetable or carbonaceous matter, as straw, leaves, pine brush, corn-stalks, a crop of cow peas, or any other green crop, bog or leaf mould, decomposed peat, and even tan-bark itself, so deeply beneath the surface as not to interfere with cultivation, will by the slow decomposition of these materials much increase the fertility of a clay soil by improving its texture.

The frequent working of the soil with the hoe and spade, admitting the ammonia and fertilizing gases of the atmosphere is itself very beneficial to clay soils, if done when the earth is dry. A clay soil is exceedingly injured if worked wet. A clay soil is so difficult to work, and so liable to break into a hard crust after every rain, that it will well repay where materials for the purpose are at all convenient to lay out a good deal of time and labor in improving its mechanical texture.

The *texture* of a *sandy soil* is much more easily improved than a clay, as the per centage of clay required to convert any sand into a loam is not very large and can easily be added. Fortunately too in sandy soils, clay is generally near at hand, often lying but a few inches beneath the surface. A few loads of stiff clay, scattered thinly over the surface in autumn, are worth more applied to such a soil than any manure, for the clay will render manures permanent in their effect, which else would leach through without benefit to the crops; the effect of the clay itself is lasting. Lime, as before observed, stiffens the texture of a sandy soil, and gympsum has the same effect. Ashes are also an excellent and profitable dressing to to such a soil, leached and unleached, but the best of all applications is a good clay marl. Peat, vegetable manure, and carbonaceous matters of all kinds, as refuse charcoal, are good applications to sandy soils, as they enable them better to retain the fertilizing properties of the manure applied, if they do not much affect the texture of the soil. Sandy soils very often rest upon a clay bottom, so that the thorough trenching a garden should receive, will often greatly improve its texture. Working such a soil while wet, and the continual use of the roller will also render it more tenacious. But clay is the great improver, and it is astonishing how small a quantity of fine clay will cement a loose sand into a good loam.

To conclude, in regard to the texture of soils, choose or make for your garden a loam of medium texture a little inclined to sand, and the finer its particles the better. Clays and sands both become objectionable, as they depart from this friable loamy texture, and the first step in their improvement is to bring them to this condition. A medium consistency best agrees with vegetation.

The *depth* of *soil* in the garden is as likely to need improvement as its texture. A deep soil is necessary that the roots may penetrate it freely in search of food, and be able to endure our summer droughts. The roots of a strawberry have been traced five feet down in a deep rich soil. The difference in freshness and growth of plants raised upon trenched soils, and those growing upon soils prepared in the common manner is remarkable. In lawns, the color of the grass will indicate very exactly the greater or less depth of the soil. The depth of soils may be increased by subsoil plowing, or trenching.

Subsoil plowing is much cheaper and answers a very good purpose when the spot to be prepared is large. A common turning plow goes first, and plows as deep a furrow as practicable. It is followed by the subsoil plow in the same furrow, which loosens the soil without turning it up to the depth or eighteen or twenty inches, unless it is a stiff clay or gravel.

Trenching is the mode of improving the depth of the soil in smaller gardens, and is performed in this manner: At one end of the plot to be trenched, you dig with the spade a trench three feet wide, and two feet deep; you throw the earth out on the side away from the plot to be trenched. Shovel the bottom clean, and make the sides perpendicular, leaving a clear open trench the width of the plot. Open another trench the same width, and put the surface spadeful of that into the bottom of the former trench, and the next spadeful upon that, until opened to the same depth as the *first* one. When the plot is entirely trenched in this way, the last trench will remain open, which must be filled with the earth thrown out from the first one, which finishes the work. If the subsoil is poor and gravelly, it is better to take off the top spadeful, and loosen up the bottom to the required depth, with a pick, without bringing it to the surface. If the soil requires it, as it generally will, layers of manure may be added to those of earth, alternately. If the soil is too sandy, clay and other amendments must be added; while if too heavy, woods-earth, leaves, muck, straw, tan-bark, or any other vegetable refuse can be alternated, putting the coarsest materials at the bottom. Tan-bark, particularly, should be buried at least six inches below the surface, unless the ground is to be cropped with strawberries or Irish potatoes, to which it is advantageous.

Trenching is an expensive operation, costing some thirty or forty dollars per acre, but "nothing," says Mr. Barry, "is so expensive and troublesome, as an ill-prepared soil." This process is found to be of great advantage in England, where there is no lack of moisture, and still more so by the market gardeners of the Northern States, while in our own dry, warm climate, it is, as I know by trial, absolutely indispensable. Ground thus prepared is not so liable to wash away, as it will readily soak up the heaviest rain, if properly terraced. There is no point of greater importance than this. Poor ground deeply trenched, is better than rich with shallow tillage, and when the ground has been prepared once in this manner, it will feel the benefit forever after. Increasing the depth of the soil in this mode, is to all intents and purposes increasing the size of your garden; for one-fourth of an acre thus prepared, will yield in a dry season, as much as an acre will, with shallow tillage; and the growth of the plants in a good season, will be fully doubled. Trees especially feel the benefit of this preparation, and all fruit gardens should be thus prepared. No matter how deep you may work the soil for trees or plants, their fibres will penetrate it, and feel the good effect.

Trenching should be performed in the fall—the coarse manure dug in at that time. At the top it should be well manured with well rotted dung, charcoal dust, ashes, or other good manure, dug in shallowly, taking care to level the ground while trenching, so as to prevent washing. Another good coat of compost should be added just before planting in the spring.

Ornamental Trees for California.

The following sketch of the best trees suitable for California, and which are easy to procure, we notice. Of the *Æsculus*, our Buckeye we esteem one of the finest ornamental trees for a park that can be had, and our Maples equal any known. We give from Breck's Flower Garden, and other good authority, the following varieties, which we hope will be cultivated. We know we have, on our hills and mountains, as fine ornamental shade trees and evergreens as the world can produce.

ÆSCULUS.

Horse Chestnut.—This tree, when planted in a rich soil, grows to a large size, and is beautiful in shape, foliage and flower; and, as it is not subject to destructive insects, is valuable for shade in streets, or for extensive ornamental grounds.

The *Double-flowering Horse Chestnut* grows to a large size, and is much like the common Horse Chestnut; but, when in bloom, presents a far more beautiful appearance, the flowers being so double as to resemble the Double Pink Hyacinth. The tree flowers when quite young, and is readily propagated by grafting on the common species.

Æ. flava is a native of our western and southwestern States, and is found growing to the hight of eighty feet, and four feet in diameter; and has yellow flowers.

Æ. glabra, or the Ohio Buckeye, is a tree with rough bark.

The *Cut leaf*, *Variegated leaf*, and other species and varieties of this tree, are suitable for streets, or the shrubbery. Some of them are shrubs, or small trees,—as *Æ. parviflora*, *Californica*, *pavia*, &c. *Æ. rubicunda* is a very handsome species, with pink flowers.

ACER.

Acer, or the Maple Family.—More than forty species of Maple are known, of which ten belong to the United States, and nearly all are desirable ornamental shade trees. The common species of New England are the Red Maple, Rock Maple, and White Maple, all first-rate shade trees. We have, also, the Striped and Mountain Maple, smaller trees, not so well known as the others, and interesting in large plantations.

"The Red Maple, called also the White, Swamp, Scarlet, and the Soft Maple, is a tree of middling size, growing abundantly in the swamps and low grounds in most parts of the State. Its flowers, which appear in April or May, before the leaves, are of a bright crimson or scarlet, and make a striking appearance in whorls, or pairs, of sessile-crowned bunches, on the scarlet or purple branches. The Red Maple is usually a low, round-headed tree, of less beauty of shape than either of the other species. But the great variety of rich hues, which it assumes earlier in the fall than any other tree, gives it a conspicuous place in our many colored landscape." It is a tree of very rapid growth, and, although it is more at home in a wet soil, succeeds very well in any common good soil. This tree is sufficiently large for streets or parks, growing in moist land to the hight of eighty feet; it is highly ornamental while in flower, in seed, or in the rich autumnal tints of its foliage.

Acer dasycarpum.—White Maple.—This species is sometimes confounded with the Red Maple, but Emerson says, "It may be easily distinguished by the silvery whiteness of the under surface of the leaves, and by the color of the spray. The young shoots are of a light green, inclined to yellow, with oblong brown dots; in the second year they become finely striate with brown, and the dots enlarge. The beauty of the finely cut foliage, the contrast between the rich green of the upper surface of the leaves and the silver color of the lower, and the magnificent spread of the limbs of the White Maple, recommend it as an ornamental tree; and it has been extensively introduced in New York, Philadelphia, and some other cities." I was familiar with a number of large White Maple trees, growing in Lancaster, Mass., one of which, near Centre Bridge, in a meadow-pasture, is thus described by Mr. Emerson: "In 1840 it was eighteen feet five inches in circumference at one foot from the ground, the bulging roots preventing a nearer measurement at the surface. At three feet it measured sixteen feet eight inches; at six feet, thirteen feet ten and a half inches. It divides, at a low point, into several large branches, and rises to about sixty feet."

Acer saccharinum.—The Rock or Sugar Maple.—The Rock Maple is easily distinguished from the other Maples by the roundness of the notch between the lobes of the leaves, which, in those already described, is somewhat acute. This tree, which is also called Hard Maple, from the character of its wood, and Sugar Maple, from the valuable product of its sap, is, in all respects, the most remarkable tree of the family. When young, it is a beautiful, neat, and shapely tree, with a rich, full, leafy head, of a great variety of forms, enlarging upwards, and forming a broad mass above; or, tapering at each extremity, and in the middle, supported by an erect, smooth, agreeably-clouded column, with a clean bark, and a cheerful appearance of vigor. For shade trees, for street or park, there are none that excel the Rock Maple in the richness of its green foliage through the summer, and beautiful tints of yellow and orange in autumn, nor for the gracefulness and beauty of its proportions.

How to Make One Farm Equal to Three.

In a recent address before the Ohio State Agricultural Society, G. T. Stewart, Esq., thus spoke on this subject:

"Many persons are destroying the productiveness of their farms by shallow work. As they find their crops are diminishing, they think only of extending their acres of surface, as they suppose their title deeds only give them a right to six inches of earth. If they will take their deeds, study their meaning, and apply the lesson to their fields, they will soon realize threefold crops, that the law has given them three farms where they supposed they had only one; in other words that the sub-soil, brought up and combined with top-soil, and enriched with the atmospheric influences, and those other elements which agricultural science teaches them to apply to their ground, will increase three-fold the measure of its productiveness."

Best Aspect for Vineyards.

The following hints from the best authors, and from practical as well as as scientific minds, should be carefully perused. It will be seen that the position we have taken in relation to the hill-side culture, is fully sustained by the best authority:

Mr. Hoare, in his Treatise on the Grape, says: "In the choice of a good aspect, therefore, shelter from high winds, and those aspects that are the least exposed to their effects, and that receive a full portion of the solar rays, may be deemed the best. The best aspects in the southern parts of England are those that range from the eastern to the southeastern, the last of which may be considered the very best. The next best are those which follow in succession from southest to south. An aspect due south is undoubtedly a very good one, but its exposure to those strong winds which frequently blow from the southwest forms a great drawback. The remaining aspects are those which range successively from due south to due west. These are all good ones provided they are sheltered, or partially so, from the destructive effects of the high winds above mentioned. North of the western point, the maturation of the wood and fruit of the vine becomes uncertain. East by north is a very good one. North of this point, the solar rays are not sufficiently powerful to mature either the wood or fruit."

Chaptal says, "That the middle of a hill-side produces the best wine, the upper part the second best, and the bottom of the hill the most inferior;" showing, apparently, that the middle location contains the essential nourishment required; that in the upper part, there is a lack of this, and at the foot of the hill there is either too much of it, or too much moisture.

Monsieur de la Quintiney says of the Muscat grapes, that they "require a temperate country and the expositions of the south and east, and always a *light* ground; we seldom see any good in pure earth, and, if it be in hot climates, in gravelly and sandy grounds."

The Penny Cyclopedia says of the aspect: "On the steep slopes of hills towards the south, and sheltered from the northeast, the grapes attain the greatest maturity, and the vintage is most certain. So great an influence has a favorable exposure, that in the same vineyard the greatest difference exists between the wine made from one part and that made from another, merely because there is a turn round the hill, and the aspect varies a very few degrees. A change of soil produces a similar effect. The famous Rhine wine, called Johannisbergh, when made from the grapes which grow near the castle, is worth twice as much as that made a few hundred yards further off. Here both soil and aspect change. The *Clos de Vougeau*, which produces the finest Burgundy, is confined to a few acres; beyond a certain wall, the wine is a common Burgundy, good, but without extraordinary merit."

At Bourdeaux, a southeast exposure is preferred, and in Germany, generally, a southwest; in some places, a northern exposure is thought best, as the danger from late frosts is less.

Droughts—Whither are we tending?

The remarks on the above subject, by the Ohio Farmer, are more particularly adapted to that locality than to ours; yet, from the importance of the suggestions in relation to *saving* forests, and *planting* trees, we copy it; and the application of the same reasoning would perhaps attribute the cause of our "dry season" in part to the absence of trees from our plains and valleys, and hence, if trees are planted extensively, our climate might be much improved.

The destruction of our forests, a destruction which has been going on now ever since the settlement of the country, and which has been remarkably rapid in the West for the last fifty years, is producing the following results, which must be very obvious to every observant person.

The surface of the earth is more exposed to the drying winds, and to the beams of our summer sun. These causes quicken the drying of the soils.

The sources of many a well and stream are dried by the removal of trees from slopes and hills, from whose bosoms they once drew a permanent supply of water.

Far less rain falls on the soil during the summer months than would fall if the earth was more generally shaded with trees. Wide forests attract showers. Many a forest enjoys a generous rain, when the wide, open plain is scorched with drought. Forests act as do streams, to direct the courses of showers, and concentrate them upon their own area. Perhaps as much water falls in a year on a prairie or open country, but it comes in great storms, and in the winter, or spring, or autumn. When it is needed most it is most lacking.

Forests serve as pumps to draw up water from deep in the ground. Every one who knows what an amount of water a single large tree will draw from the ground by its roots, and throw into the air from its leaves, can form some idea of the vast quantity of moisture which is exhaled by a wide forest in a single week, or even in a single day. The ordinary vegetation of a farm does this in a far less degree. The removal of the forests, therefore, greatly diminishes the amount of moisture, which, during the summer, is exhaled into the air from the vegetation which covers a given area. Consequently, much less exists in the air as the material for showers, than would exist were the forests drawing from the deep earth a more generous supply.

It will be seen from these facts that the destruction of the forests is one grand cause for the droughts which have become more frequent and intense for the last several years. Some, if not all, of these results of the removal of our forests have attracted the notice of our farmers, and they have doubtless prepared them to consider somewhat the question what remedy is feasible.

The only remedy possible is simple and plain. It might not cure the evil. But it would doubtless diminish it. It consists of an adherence to the following maxims: *Save* all the forest trees you can. And *plant* (on the prairies especially) all the trees you can.

Under the head of saving trees, the course would be somewhat like this. On the older farms and in the older districts, clear no more land. Select the least valuable wood for fuel. Allow the second growth of timber to have a fair chance. When trees are felled for lumber or building timber, let them be cut so that in falling they shall injure as little as possible the surrounding trees. Then use for fuel all those parts of the felled trees that you cannot use for lumber. If you must clear land, clear the ground, leaving the hill-sides and the [illegible] covered with their leafy honors. There are reasons than one for this advice.

Under the head of planting, we would recommend the following things. We may reject same suggestions hereafter. So we will now. Plant trees around wells and permanent bodies of water. Plant trees along broken [illegible] on the peaks and sides of rocky hedges. trees to protect houses and barns, and other buildings, from the heats of summer, and from storms of winter. If your farm is clear much, and you decide to keep it, devote a [illegible] of the cleared land to the growth of forest. Get the best advice you can. Select the [illegible] with the best judgment you can command, it up well, and plant a good variety of growing trees, mostly indigenous, for the your children. If you are not a very old you may live to use them yourself, and to by that time, that they render the ground stand on the most valuable part of your [illegible]

Sheep Raising.

We select from Cole's little book on the [illegible] eases of Animals, the annexed articles, as we the attention of our readers who are now [illegible] ested in sheep raising, which is destined one of the greatest interest of the country.

Lambs.—Young lambs require particular tention. If the weather should be [illegible] stormy, they should be in a dry, warm yet pretty well ventilated. If there around the sheep's bag, in the way of the when sucking, cut it off. Sometimes lambs so feeble soon after they are born, that cannot suck without assistance, or they weak or stupid that they will make no [illegible] exertion to help themselves. In such often becomes necessary to press out the ings in the teat, as the lamb has not draw out the thick matter; then he may if not, lay the sheep on her side, and the teat into his mouth, and if will not draw milk, press it out into his mouth, and soon learn to suck.

Some young sheep will not own their lambs, or owning them, they will not stand and allow them to suck, owing to their ignorance or the tenderness of their bags; and attention necessary, else the lamb will be lost. Some lambs are troubled in cutting their teeth, cannot suck well for soreness of the gums. such cases, rub hard the swelled gums with thumb-nail, or other hard, smooth substance which will promote teething.

Some sheep, old as well as young, will own their lambs, so as to allow them to suck all; this is a very troublesome case, and sometimes difficult to remedy. Bringing a dog the lamb may have some effect, as she may disposed to protect her lamb, and fight bravely in its defence. If she persist in her unnatural course, hold her often, and let the lamb suck he will soon learn to run to his mother for purpose, as soon as his kind assistant appears. Let him suck as often as morning, noon, evening, and at night, just before bedtime; in this way, sheep will often own their own lambs sometimes in one week, and again not till two or three weeks.

If a single lamb die, and another sheep does not own her lamb, or another sheep has two, skin the dead lamb before it is stiff, if convenient, and put the skin on the lamb you would have the *lambless* sheep own. When a boy, we had the care of sheep, one brought three lambs; at that time a single lamb died, and I put the skin on one of these *thrices*, and the poor *childless* sheep owned it. By holding the sheep that had some time before lost her lamb, the other two sucked her, occasionally, but she did not own them until turned out, in the spring. But after they had been out a few days, I noticed that the three lambs were carefully cared for, each having a mother exclusively.

When the excrements of a lamb are so glutinous as to fasten the tail to the vent, it must be washed clean, and the tail and buttocks should be rubbed with powdered clay or loam, and some mild remedy, as recommended for scours. When you give a lamb cow's milk, use that of a new milch cow.

Browse for Sheep.—Browse of various kinds is good for sheep in winter. They are very fond of it, as it affords a change, being green food. The browse of oak, and other powerful astringents should be avoided. The browse of evergreens is used, not only as a wholesome food, but for its medicinal qualities, particularly pine and hemlock. And in some cases it is used to considerable extent as a substitute for other fodder. Pine and hemlock are best, but spruce and fir are also good.

Some farmers have nearly supported their sheep on browse for months, when hay was scarce. J. Whitman, of Turner, Maine, has used pine and hemlock for his sheep for more than forty years, and he has known no injury from them, but a benefit, and a saving of hay. He says that hemlock does not injure sheep with lambs. He prefers pine and hemlock boughs to spruce and fir.

To Destroy Vermin.—Sheep are often infested with ticks, which, in different ways, do much damage. In grown sheep, they cause the animal to pull out the wool with its teeth, in biting and scratching to obtain relief from the intolerable itching which they suffer. Sometimes almost the whole fleece is lost in this way. Ticks always tend to reduce the flesh of the sheep; and in young lambs they are particularly injurious, by keeping them poor and weak, so that they are unable to bear up under the effects of inclement weather; thus remotely causing death.

Remedy.—There are several ways of ridding sheep from this annoyance. In a day or two after the sheep are sheared, the ticks having lost their natural shelter and protection, the wool will nearly all go on to the lambs; the fleece of which is generally started enough to afford them better harbor than they can get on the closely shorn skins of the old sheep. At this time they may be very easily destroyed by immersing the lambs in a strong solution of tobacco. For this purpose, a tub or vat of sufficient size, should be procured, into which, after having sufficiently boiled or steeped the tobacco (tobacco stems are just as good as anything), turn the decoction. In this immerse the lamb all over, except the head, a sufficient time to allow the liquor to penetrate to the skin. In this way, with convenient apparatus, two hands will readily dip a hundred in an hour. If the solution is of proper strength, not a tick will be found alive in ten minutes after immersion.

Another.—One of the most effectual and convenient modes, both to the operator and the animals, is to fumigate with tobacco smoke.

have observed that smoke is instant death to the filthy rascals. It may be taken up into a bellows, in the same way as air, and blown into the wool. A very cheap and convenient apparatus may be made of tin or green wood, into which tobacco and a live coal may be put, and with the bellows the smoke may be blown into the wool. The apparatus should be pointed, and the wood opened, and the point put near the skin and closed around it. After blowing in the smoke, take it out, close up the wool, and move to another place some eight or ten inches off, and then go over the whole fleece, which requires but a short time. We prefer this to all other methods, as nothing is more effectual and harmless to the sheep. Sometimes tobacco makes sheep sick, and it has killed lambs.

New rum or whiskey, rubbed all over the animal, is a good remedy for vermin of almost every kind.

RAISING LOPPED HORNS.—A short time ago a correspondent inquired if there was any known method of raising lopped horns. We accidentally came upon the following communication in the Albany Cultivator, for 1852. The writer says: "The horns of steers can be raised without the least damage to their growth (the most convenient time to do it is when they are kept in the stable) by taking two small pulleys; place one of them directly over the front edge of the manger, high enough to be out of the way of the horns—the other at any place you wish, so that the weight will hang out of the way; pass a cord through them with a loop at one end, to slip over a button on the end of the horn; at the other end attach a weight of from two to four pounds. This should be put on every night when the steers are in the stable, and taken off in the morning when turned out. I have never known this operation, when faithfully performed, to fail of raising one or both of the horns to any desired position, in from two to six weeks time. Our success has been such that we consider the lopping of one or both of the horns no serious objection, provided they are otherwise in good shape."

First Principles of Farming.

1. All lands on which clover or the grasses are grown, must either have lime in them naturally, or that mineral must be artificially supplied in the form of stone lime, oyster lime, or marl.
2. All permanent improvement of land, must look to lime or marl.
3. No land can be preserved in a high state of fertility, unless clover and the grasses are cultivated in the course of rotation.
4. Mold is indispensable in every soil, and in healthy supply can alone be preserved through the cultivation of clover and the grasses, turned in the green crops, or by application of composts, rich in the elements of mold.
5. All highly concentrated animal manures are increased in value, and their benefits prolonged, by admixture with plaster, salt or pulverized charcoal.
6. Deep plowing greatly improves the productive powers of every variety of soil that is not wet.
7. Sub-soiling sound land—that is land which is not wet—is also eminently conductive to increased production.
8. All wet land should be drained.
9. All grain crops should be harvested before the grain is thoroughly ripe.
10. Clover, as well as the grasses intended for hay, should be mowed when in bloom.
11. Sandy lands can be most effectually improved by clay. When such lands require marling or marling, the lime or marl is most beneficially applied when made into compost with clay. In slacking, salt brine is better than water.
12. Draining of wet lands and marshes, adds to their value, by making them productive.
13. To manure or lime wet lands, is to throw, in measure, lime and labor away.
14. Shallow plowing operates to impoverish the soil, while it decreases production.
15. One bushel of plaster per acre, sown broadcast over clover, will add one hundred per cent. to its produce.
16. Periodical applications of ashes tend to keep the integrity of soils, by supplying most, if not all, the organic substances.
17. Thorough preparation of land is absolutely necessary to the successful luxuriant growth of crops.
18. Abundant crops cannot be grown for a succession of years, unless care be taken to provide an equivalent for that substance carried off in the products grown thereon.
19. To preserve meadows in their productiveness, it is necessary to harrow them up and roll them.
20. Stiff clays are benefited by fall and winter plowing.—[Western Agriculturist.

Farmers will do well to take this list of important facts, and act upon them.

EQUIVALENTS OF VARIOUS PLANTS TO HAY. Farmers are often at a loss to know how much one kind of ordinary fodder is equal in nutritive value to an equal amount in weight or measure, of another kind. For instance, if I find a horse is kept in good working condition on eight quarts of oats and ten pounds of hay every twenty-four hours, how much *corn* must I give him in the same time with the eight pounds of oats to produce the same results as the eight pounds of oats? In Berger's Economy of Farming, translated by Smith, there is a "Table of Equivalents," which will be found useful to those studying the management of stock. The following is an extract:—

100 pounds of hay are equal to 90 pounds of clover hay made when fully blossomed; 98 pounds hay made before it blossoms; 98 pounds second crop clover; 98 pounds Lucerne hay; 90 pounds Sanfoin; 410 pounds green clover; 467 pounds vetches and tares, green; 275 pounds of Indian corn; 374 pounds wheat straw; 244 pounds rye straw; 164 pounds oat straw; 153 pounds pea straw; 201 pounds raw potatoes; 175 pounds boiled potatoes; 339 pounds mangel wurzel; 504 pounds English turnips; 275 pounds carrots; 308 pounds rutabaga; 54 pounds of 45 pounds wheat; 59 pounds oats; 64 pounds buckwheat; 57 pounds Indian corn; 45 pounds rye; 55 pounds beans; 60 pounds horse chestnuts; 68 pounds acorns; 62 pounds sun flower seed; 97 pounds linseed cake; 105 pounds wheat bran; 100 pounds rye bran; 167 pounds wheat straw chaff; 167 pounds rye and barley chaff.

Stock requires two per cent of his live weight of hay per day; if he works, two and a half per cent. A milch cow, three per cent. A fattening ox, five per cent. at first, and four per cent. when fattened, and afterwards. Sheep, when fattening, three and a half of their live weight in dry food per day. I have found this table of great value while feeding different animals on divers kinds of food, as well as in my stall feeding and soiling operations.—[Germantown Telegraph.

The above is data of great value to Stock raisers of California.

[For the California Farmer.]

Popular Education.

LETTER NO. 1.

EDITORS FARMER: Knowing the interest you take in educational matters, and feeling assured that the FARMER will ever be open to the advocacy of *mental* as well as *material* improvements, I shall endeavor to suggest a few practical ideas on the cause of Popular Education.

It seems to be pretty generally recognized, that no liberal government can exist where the masses are uneducated. Should any one, however, be disposed to doubt this principle, referring liberality of government to inherent nature, instead of education, I shall point him to the government of all savage tribes, to the relative grades of government existing among the different grades of the human race, to the gradual change which government has undergone since the days of the Patriarchs, to the modern history of France, to the history of Mexico and the South American States, liberal, only, in the name of their governments; and finally, I shall point him to the States of our own Union, and ask if he sees no difference between those that have a flourishing system of public instruction and those that have neglected to provide for such a department. I say, so generally has this principle been acknowledged, in our own country, that among the first acts of the legislatures of new States, will be found incorporated, provisions fostering the public school system.

Neither colleges nor academies, however well endowed, or by whatever talent presided over, are competent to do the necessary work; as it is an educated public sentiment only that advances a nation. Of the advantages of common education in bringing together, and in competition, all ranks and grades, and in breaking down arbitrary (and consequently false) distinctions in society, private institutions can claim no part. But of this I propose to say more hereafter, as I consider it one of the great advantages of a public school over a select school. A select school system—the system of the favored sons of wealth—may perpetuate learning, but it will never educate mankind. It may, and has produced great men—men who have been monuments to all succeeding ages, but whose very greatness shows us the abject condition of the masses. It is questionable whether the most elevated minds can render great advantages in a society that cannot appreciate them. Judea, Egypt, Greece and Rome produced hosts of isolated individual talent, yet these countries at the same time were full of ignorance, superstition and misrule. He who should judge the civilization and enlightenment of the time of Socrates and Plato by their writings, would make as great a mistake as would the historian, a thousand years hence, in deducing his conclusions of the American nation from the Walker invasion. Forms of government, as perfect as our own, were developed by statesmen long before our age, only to be pronounced Utopian. The most perfect code of morals was given to the world eighteen hundred years ago, and the history of the past (perhaps the present too) shows how little it was appreciated. It is a distinguishing trait between select schools and our common school system, that the great men of past ages have been exponents only of undeveloped principles, while the great of our own times are, in addition, the exponents of the national character. Elevate the masses, and we may have less great men, but we shall certainly have more great communities.

Comfort, wealth and refinement follow in the road opened by intelligence. Good laws and proper obedience to law are also of its results. And I think, that it will be found by all that these States and governments which have provided the best, and possessed longest, a general system of public instruction, have produced the greatest number of mechanical improvements, have best tilled the ground, have built the most ships, the most miles of railroad and telegraph, have the greatest number of comfortable, wealthy, and refined families, have the largest freedom of the press and of speech, and the largest freedom from anarchy or mob law.

If this be true, and I think few will doubt its truth, then a wise government will provide for its own permanency and prosperity, by the establishment of a complete system of common school education. Not a system which shall be confined to the spelling book, arithmetic and geography, but one capable of changing the abecedarian into the finished scholar; one which shall lead the child, by a natural gradation of studies, from the normal branches through the highest collegiate acquisitions. We want primary schools, grammar schools, high schools and a State University, all connected in their operations and free in tuition.

Such a system is not only an object of just pride to any State, but, financially speaking, it is a paying institution. And this is especially so in regard to California, where permanent residents and families are the greatest desiderata of the State. But until we can afford ample and cheap advantages for a liberal education, it will always be an objection to those who would otherwise gladly avail themselves of our natural advantages. It is a common complaint of that large class of our citizens who are monthly sending home money for the support and education of their families, that the condition of our schools does not admit of their bringing them here, and locating themselves as permanent residents. OMEGA.

IT is one of the most common errors of mankind to think, that the possession of something which they cannot attain, would greatly increase their happiness.

IT is a fair step towards happiness and virtue to delight in the company and conversation of good men, and where these cannot be had, it is better to keep no company at all.

WHO aims at excellence will be above mediocrity; who aims at mediocrity will fall short of it.

LINES

WRITTEN FOR THE CALIFORNIA STAR.

[The following smooth flowing and beautiful lines, we copy from the Star, the first paper published in the "land of gold." Such thoughts should be preserved:]

I.

Far o'er the blue horizon's bound,
Its silvery course a river wound;
Now glancing in the sun's broad beam,
Now lost in woods of richest green;
Whilst further still the eye could catch,
The outline of the mountain peaks,
Whose towering summits fading day
Had changed from azure to a gray.
Nearer at hand the waters broke
From out a grove of spreading oaks;
Rippling and sparkling as they played,
By sunny bank or shadowy glade—
Now rolling on with steady tide,
Now glancing o'er the rapids wide,
Till where it meets the mossy rocks,
That rear their heads—as if to mock,
The angry waves that boil and dash
And into foam their billows lash—
It seems a moment to delay,
Their murmurings—hurries on its way,
Till rolling o'er the craggy steep,
It mingles with the lake beneath,
Roaring and foaming as it goes,
Then calmly sinking to repose.

II.

Whilst yet I mused, the ruddy glow,
Had faded from the mountain's brow.
And as I marked the deepening shade,
That twilight threw o'er stream and glade,
I turned from rock and cliff away—
To where the peaceful valley lay,
Glittering with many a twinkling light,
Among the dark woods glancing bright,
Telling the spot where man had made,
His dwelling mid the forest shade;
But ere I went, I paused to mark
The towering pine whose riven bark,
Bore witness to the storm king's power,
And oft had seen the tempest lower,
When rushing on its cloudy wings,
Through the dark pass the thunder rings,
Rolling along the mountains steep,
Till lost in mutterings low and deep;
As when far from the ocean's side,
We hear its distant billowy tide. G.

The Call of Mercy.

RECENTLY we published a most thrilling appeal written in poetry, as emanating from the county jail. That appeal we should have hoped would have been so quickly answered that no other such a voice would be heard—but alas! another voice, more touching, more pitiful, more appealing, comes, and its tones should sound in every heart as an alarm bell to awaken the voice of humanity, unless "mercy is clean gone."

This appeal comes from the same pen, is written with power, and shows an educated mind—we copy from the Bulletin of January the 7th.

A VOICE FROM THE COUNTY JAIL.

Vox clamantis in eremo.
De profundis clamavi—in abysso gehennæ exaltavi vocem meam.

The subject of prison discipline—the amelioration of the mental and moral condition of those whom society has found it necessary, in self-defence, to abridge of liberty—has occupied the attention of many profound thinkers and eminent philanthropists, from the days of Howard, Beccaria and Pinel, to the present time. Fraught, as it is with interests of momentous import to the commonwealth, this matter, though yearly increasing in public importance, receives in California less and less attention every day.

Of the offender against society, well has the poet said:

"He might have been—what might he not have been!
That vice-encrusted, passion-fettered thing"—

had he been born under other and happier auspicies. What we *might have been*, had our early education and our youthful associations been different—had we been taught the religion of Love, and not been coerced by the terrors of hell-fire, it boots not now to speculate.

"Alas! for us all
Who vainly the dreams of youth recall:
For of all the sad words of tongue or pen,
The saddest are these; 'It might have been!'"

What we might *yet be*, if we were approached in the spirit of Christian charity, made the object of Christian prayers, who can tell? The most obdurate may be melted, the most flinty softened, by the precepts of charity and the practice of love.

Where are your Christian associations, your Bible distributors, your home missionary societies: Here, in your midst, ascends the cry of those who are ready to perish, and their blood will be required at your hands. Far better to minister to their spiritual wants than to dispatch missionaries to the Fejees, or to populate the wastes of Barrioboola Gha. Send us men, not of sour, repulsive, puritanical visage and pharisaical tenets, who would condemn Christ for associating with publicans and sinners, who have no compassion for the erring; not such as these—

"For man may oft be led, but rarely driven,
And on compulsion, would not enter Heaven"—

but men whose countenance is the index of the excellence of their hearts—whose features are irradiated by the benevolence from within, men who, *from experience*, can sympathise with poor weak human nature, and by the blessing of God, yon may effect much. Remember, "it is one thing to condemn the fallen; another, to inquire how he fell." Above all, let your every effort be made in the true spirit of the mission of Love.

More deeply trenchant than the most sulphureous homily ever howled forth in a conventicle of the Covenant—sweeter and more persuasive than the most melifluous ovation, crowded with tropes, redolent of rhetoric, abounding in metaphor, lisped in the pulpit of the church, miscalled, of Calvary—more comprehensive and wide-embracing than the philosophical theories of a Plato, a Socrates, or a Seneca—better far than the learning of Paul, the worldly wisdom of Solomon, the eloquence of Isaiah, the plaintive lament of Jeremiah, or the stern denunciations of the man of Sinai; are those few simple syllables dropped from the lips of Christ, embodying the spirit, stultifying, superseding, and setting aside the letter of the written Law—"A NEW commandment give I unto you 'That ye LOVE one another.'"

Amor vincit omnia, et nos cedamus amori.

LUCIFER.

THAT quaint old writer, Sir Thomas Browne, in his Urn Burial, says: "Gravestones tell truth scarce forty years. Generations pass while some trees stand, and old families last not three oaks. To be read by bare inscriptions, to hope for eternity by enigmatical epithets, or first letters of our names, to be studied by antiquarians who we are, and have new names given us like many of the mummies, are cold consolations unto the students of perpetuity, even by everlasting languages."

HORTICULTURAL.

To Farmers and Nurserymen.

DWARF FRUIT TREES AND SEEDS, only twenty-eight days from New York, by Express of Wells, Fargo & Co. An invoice packed expressly for this market, consisting of 2,000 Dwarf Pear Trees—Bartlett, Et-ta Bucco, White Doyen, Louis Bon de Jersey—all grafted on Quince Seedlings.

1,000 Horse Chestnuts, 1 year old;
1,000 Chesnuts, " "
2,000 Cherry, " "
1,000 Plum, " "
25 lbs. Yellow Onion Seed;
25 " Marrow Squash;
10 " Drum Head Cabbage;
50 " Beet Seed;
25 " Quince Seed;
50 " Apple Seed;
25 " Plum Pit.

Being the only lot of New Seeds received yet from the States. Orders are solicited early—will be sold low.

Seedlings—price will be $1 50 per dozen; $10 dollars per hundred, packed free of expense.

BRADSHAW & CO.,
Corner of California and Battery streets,
v4-26 San Francisco.

Commercial Nursery,

Three-Quarters of a Mile East of the City of San Jose.

THE Proprietors of this Nursery, having received the award of the

FIRST PREMIUM
OF THE
STATE SOCIETY

the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of

FRUIT AND ORNAMENTAL TREES,
For the Trade of 1856 and 1857,

that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.

Our Stock consists of

One Hundred Thousand Trees,

FROM FOUR TO ELEVEN FEET IN HIGHT.

Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.

v6-13 3m SMITH & WINCHELL.

Briggs' Nursery,

Three Miles from Marysville, on Great Road.

THE Proprietor of this extensive Nursery would invite those who intend to establish Orchards the coming Autumn to the following stock of Trees, which will be ready for sale:

70,000 Extra Peach Trees, from 3 to 6 feet;
100,000 Dormant Buds;
6,000 Full size Plum, of best kinds;
10,000 Dormant Buds;
5,000 Cherry Trees, good size—best sorts
15,000 Pear, of the rarest kind only;
5,000 Apple Trees, ready for orchard;
500 Quince, of very choice kinds;
10,000 Nectarine Trees, of extra size;
10,000 Apricot " "

The above are grown under the eye of the undersigned, and the kind of fruit he has exhibited the present year is the best guarantee that they are indeed fruit trees that will bear.

The proprietor of this Nursery will receive from the East this Autumn an invoice of some

Fifty Thousand Trees.

These will be of extra sorts, and such as the proprietor will guarantee to his patrons.

The proprietor being desirous of encouraging others to plant Orchards of fine Fruit Trees, will offer the following inducements:

Peach Trees, No. 1, named first.....$1 50 each.
" " Dormant buds..... 50 "
Plum " full size..... 2 50 "
" " Dormant buds..... 1 25 "
Cherry " full size..... 2 50 "
Pear " " " ..... 1 50 "
Apple " " " ..... 1 50 "
Quince " " " ..... 1 87 "
Nectarines..... 1 50 "
Apricots..... 1 50 "

All the above trees will be warranted true, as the proprietor is more desirous to have his customers succeed and do well, than merely to sell his trees.

☞ Purchasers of over $1000 will receive a discount of twenty per cent.

v6-4 G. G. BRIGGS, Marysville.

The French Garden,

Near the Cottage, on the Santa Clara Road.

A. DELMAS.....PROPRIETOR.

GRAPE VINES! GRAPE VINES!!

THE Proprietor of these extensive grounds would take pleasure in calling the attention of the public to the very great collection of Grape Vines, which he will offer the present season.

The Fruit from this Garden was exhibited at the late State Fair, and received the Diploma of the Society. The White Wine made from this Vineyard received the First Premium of the State Society. This Vineyard also obtained the First Premium for the Best Vineyard of Foreign Grapes, the present year.

The Proprietor will offer the present season his grand collection of Eighty One Varieties. Among this splendid assortment will be found—

Black Hamburg;
Chasselas of Fontainbleau;
Chasselas of Frontignac;
Cannon Hall Muscat;
Muscat of Alexandria;
Charlesworth's Tokay;
Syrian; Black July;
Golden Chasselas;

Together with every variety of the Grape known and approved.

The undersigned is confident that this collection is the largest and most complete in the country, and to this the attention of the public is particularly invited.

The subscriber would also offer—

APPLE, PEAR, PLUM, PEACH, APRICOT, NECTARINE, and other Fruit Trees.

—Also,—

RASPBERRY, CURRANT AND GOOSEBERRY TREES,
In good assortment.

Catalogues of all the varieties grown in this Garden will be sent to all who desire them, by addressing letters to the proprietor.

All orders will be answered promptly, and Trees and Vines carefully packed for any place in the country.

v6-13 4m A. DELMAS,
French Gardens, San Jose.

San Jose Nursery.

THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of

FRUIT AND ORNAMENTAL TREES,
ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.

Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 63 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.

The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer

Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.

In each of the above the very best and most approved varieties.

The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—

Black and Honey Locust;
Chinese Allanthus, Catalpas.

—Also,—

20,000 Mulberry Trees.

All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!

In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 90 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.

The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.

Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.

Address letters to L. BREVOST,

HOTELS, &c.

To be a Man in this World!

YOU MUST OBSERVE
TWO VERY IMPORTANT MAXIMS!!
FIRST, THAT
"Economy is the only sure Road to Wealth;"
SECOND, THAT
"Early to Bed and early to Rise."
You all know what that does for a man.

By the by, speaking of Economy, Beds, Early Rising, &c., reminds us of these magnificent **Patent French Spring Beds,**

AND THE
EXTRAORDINARY REDUCTION
IN THE
PRICE OF LODGINGS!
AT
Woodward's What Cheer House,
119 and 121 Sacramento street,
87, 89 and 91 (new addition) Leidesdorff street.

Lodgings, per night.....50 and 75 cents.
Lodgings in first class single rooms, furnished complete, per night.....75 cents.

If you cherish the least feeling of regard for the pressing wants of the "inner man," the exceeding low price of board at this establishment must convince you that this is the place.

Meals, each.....50 cents.
Board, per day.....$1 00
Board, per week.....6 00

In order to furnish food for the mind, there is a splendid READING ROOM, abundantly supplied with Papers, Periodicals, &c., from all parts. There is also an extensive Library of Choice Works.

☞ FREE BATHS. ☜

In short, everything calculated to promote man's comfort can be procured at the What Cheer House, 119 and 121 Sacramento street—situated in the very center of business. It is also directly opposite the Mail Steamship Company's Office, and in the immediate vicinity of the United States Branch Mint.

R. B. WOODWARD,
Proprietor.

N. B.—This House is conducted on strictly temperance principles. v6-21 tf

[PREMIUM MANUFACTORY.]

Hudson's Golden California Mustard.

THE proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs., 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.

The proprietor also manufactures a very superior article of Salad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.

For any further information regarding this Mustard, we refer to the principal business houses in this city.

Purchases at wholesale or retail are specially invited to call at the office,

22 Front street, corner of Pine,
H. O. HUDSON.

P. S.—The highest price always paid for pure A No. 1 Mustard Seed. v6-8 3m

The California Farmer.

SAN FRANCISCO, FRIDAY, JANUARY 23, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

OUR PUBLICATION OFFICES.

In order to facilitate and advance the interests of our paper, and to promote the cause we plead, we shall issue our paper hereafter at San Francisco and Sacramento, simultaneously, having offices in both places. Our Office in Sacramento as heretofore, and our Office in San Francisco, No. 130 Washington street, near Sansome.

Letters for the Farmer.—Our correspondents can now address us either at San Francisco or Sacramento, as shall be most convenient for them. Letters, &c., addressed to us at either place will be promptly attended to. Our exchanges will please forward their favors to us at San Francisco, and publishers who are in correspondence with us will hereafter please forward their works for review to San Francisco

Special Notice.—A special notice will be inclosed to those of our subscribers who are interested in the Agricultural and Horticultural Book now in progress, and of which we have spoken.

Our New Volume.

In our last issue we promised to lay before our readers our plans, prospects, wishes and hopes for the future. We shall briefly present them now, and in this appeal we ask the kind and candid consideration of all to whom this, our address, is made. Three years of our California life and labor have been given to our present enterprise—in editing and publishing the California Farmer, and three years of such a work, surrounded as it has been with doubts and difficulties, care and trials of no ordinary character, has been to us equal to ten years of the ordinary events of one's life. Commencing as we did this work at a period when the cause of Agriculture was but little understood or appreciated, we knew and felt that a Herculean task was before us. But our hope lay in the consciousness that it was an enterprise worthy of man's highest effort, and a work that must eventually be productive of great good to the whole people, and be the means of awakening attention to the resources of our noble State, whose untold riches lay as yet unrevealed. Three years we have labored to this end—and although the eye and heart of the people of California were fixed mainly upon her "gold fields," yet we felt that the great reliable wealth, that which would tend to build up and make permanent her institutions, and give prosperity and happiness to her citizens, lay in the hidden treasures of her *agricultural resources*. These awakened, these encouraged, these brought forth—they, in their turn, would give life to all the other industrial employments of her citizens, would quicken the genius of her artists, and bring into action all the manufacturing powers that nature had designed should be hers.

How well we have accomplished this, how faithfully we have labored, it is not for us to speak—we can only say, we have most conscientiously labored with an eye single to the great cause of the "working man's interest," in every department of the Industrials. We have labored to this end, and we believe not in vain; we can look with heartfelt pleasure upon our fields of waving grain, our orchards of luscious fruits, our vineyards of the clustering grape, and the presses bursting out with new wine; we see the happy home of thousands whose pathway is fragrant with the riches of Nature's own flowers; we see, too, the workshops of the mechanic, where thriving industry is rewarded; we see the foundries, mills and manufactories sending forth the results of genius and skill, and we see our land dotted over like stars in the firmament with schools, and other institutions, which speak a people's rapid advance—and it is this that has cheered us; it is to these we look as more sure and certain to secure a people's prosperity and happiness, than all the "gold hills" or "placers" the world ever revealed.

In laboring to reveal the Agricultural resources of California, we believed and we knew these glorious results were to follow, as certain as we knew that good wheat, well sown and carefully tended, would bring a rich harvest; and we now begin to see that "better day coming," and we believe our citizens all see this, for this is our hope, and the merchant, the ship owner, the real estate owner, the manufacturer and the mechanic begin to see this and begin to feel it, and we rejoice to announce that they are beginning to *act on it*—aye, to join in the work of aiding the "industrial class," that shall carry them safely over the waste places and dark spots into a haven of prosperity they have never seen or known before.

The California Farmer has been the friend of these great interests from the day of its issue to the present moment, and it ever will be—unfaltering, unwavering and fearless, independent of all political, sectarian, or sectional bias; it shall still labor for the great working interest of California, it shall labor to build up and establish prosperous and happy homes, where those who toil can "sit under their own vine and fig tree, with none to molest or make them afraid"—and can we not ask the aid and hearty co-operation of every family in the land for such work? Can we not ask, and shall we not receive the aid, a generous and hearty aid in this work, of every merchant, manufacturer and mechanic, as well as the farmer and day laborer, in the cause in which we are now engaged?

We ask your aid! We ask your co-operation with us, and your name to our subscription list, that we may through the columns of our journal make known to you the various plans in operation for your own success. We hope it is not necessary for us at this late day to speak of the character of our journal. Three years it has been before the public, and we are happy to say is received by subscribers in every State of the Union and in Europe, as well as in every portion our own State,—approved and highly spoken of; and we now appeal to the citizens of California, to give us that union of aid in an increased power, in all these branches of labor and interest that we may accomplish more for these interests, and bring about still greater and better results.

The first and second numbers of the New Volume (VII.) we have now laid before you. They shall speak for us in their typography; Historical, Selected, Editorial and other matter. We can speak with strong confidence, and say, the California Farmer shall steadily keep pace with every improvement of the age.

We can announce in advance that we have made arrangements with some of the most talented female writers that will soon grace our columns, in addition to many who have heretofore been with us. Talent of the highest order in science has been secured, from the other sex. In the ornamental, we shall constantly improve, by plate numbers in every department of which we speak. Our type and paper shall always be the best; our efforts the most earnest; our devotion entire; and we finally appeal for that support which it shall be our aim to deserve. To our subscribers we appeal, that they may give us not only *their* sympathy, but bring that of their friends to unite with them. Those to whom we send a marked number of this issue we appeal for their aid, to join our ranks. To all who are interested in these plans we appeal, and say, try our journal one year—and try it this year—and we believe you will always remain with us.

With our best and most heartfelt gratitude for all past favors we leave our appeal with you.

Valuable Experiments.

We have been indebted to G. P. Louck, Esq., Produce Dealer, for the following data. Careful experiments were made, before planting, which were as follows:

1st. One ounce of blue vitriol to one bushel of wheat, soaked four hours, and dried with ashes. 2d. One ounce of vitriol to the bushel, soaked eight and ten hours, and dried in ashes. 3d. Grain soaked in the bags, and planted plain.

Results—No. 1, clean, and perfectly free from smut. 2. Nearly equal to No. 1, but not quite. 3. Showed smut, plainly.

Another lot of 800 sacks of wheat was sold by Mr. L. for a farmer; half of this lot had been soaked in vitriol, and half had not—the result was that the soaked wheat brought $2 65, and the other $2 35, making a difference and saving in favor of soaking of $120 in 400 bags. We saw the samples, and the first was perfectly free from smut, and full and plump wheat.

To the Members of the Legislature.

The Members of the Legislature are kindly invited to visit the Exhibition Rooms of the State Agricultural Society, where they will see several thousand specimens of Agriculture, Horticulture, Floriculture, Minerals, Curiosities, and much else that is worthy their especial notice as products of our soil, the works of our Artists, or the skill of our Mechanics and Manufacturers. At these Rooms may also be found Agricultural and other valuable Books of reference, and the papers of nearly every State of our Union, and of Europe.

To these Rooms all are invited freely, where every courtesy will be shown those who labor to advance the public weal.

Rooms on Fourth street, between J and K—near the Dawson Hotel.

Popular Education.—We present our readers in this number of the Farmer, with the first of a series of letters from our correspondent "Omega," upon the all important theme of *Education for the People*. It is with great pleasure we call the attention of all to these letters. The cause they espouse, the sound practical manner in which they are presented, must insure an interest for them. We can assure our readers that we know the writer is engaged with all the powers of his mind in advocating the cause; his devotion to it will, we trust, awaken a new interest for it over the State, and we should rejoice to have others enter the field and discuss the subject freely. Our columns are open, and our aid shall be cheerfully given to carry forward to its highest point, the cause of *Popular Education*.

Santa Clara Agricultural Society.—We are much gratified to see the interest manifested by the members of this Society at their late meeting, at which we had the opportunity of being present. There seemed to be good spirit prevailing; a harmony of action and earnest desire to produce results. There was a goodly number present; and among those who had been very active we noticed Dr. Bascom, Judge Daniels, Dr. Cobb, J. K. Kennedy, Esq., C. Peebles, Esq., and many others. They took hold of the work as if they were in earnest, and we look for good results.

Copper Mine.—A discovery of very fine specimens of Copper Ore, or rather a species of Copper Quartz, was made recently at San Diego, by Mr. H. Laidley. An analysis has been made, which proves from the surface, the quality to be as follows: from one ton of the ore, one hundred and twenty-five pounds pure ore. A handsome specimen was kindly given us by Mr. Laidley, for which he has our thanks, and we trust he will be enabled to raise a sufficient capital and a company to work the vein, and thus add to the riches of our country.

We have been obliged to omit several articles that we intended for this number—an answer to the Bulletin on Beet Sugar, an article on Sheep, and several others, which will appear in our next.

Dr. John Lindley.

[We believe we cannot better stimulate the minds of those who are engaged in the ennobling pursuits connected with the Science of Agriculture, than by presenting to them the name and portrait of one of England's most distinguished botanists. The brief sketch of Dr. John Lindley's life, his rise to eminence, and the mark he has made upon the age, is copied from the London Cottage Gardener, and this will serve, we hope, to lead men's minds to a proper study and appreciation of this noble science.]

Very recently we recorded a living example of a country gardener's son deservedly elevated for his deeds of noble daring and honorable conduct, to be the associate and the admired of our country's nobility. It is noble and animating to see such examples of the gifted son of the poor man elevated upon the pinnacle to which he has buffeted his way—

Roughed to his point against the adverse stream;"

and we have this day to place before our readers another such example in Dr. John Lindley.

Dr. Lindley was born at Catton, near Norwich, where his father, Mr. George Lindley, for many years carried on the business of nurseryman and seedsman; but, being unsuccessful in business, he ultimately became foreman to Messrs. Miller and Sweet, of Bristol Nursery, where, no doubt, many of our professional readers knew him personally. The early life of the subject of this notice was not distinguished by any remarkable occurrence. His rudimentary education being obtained in his native country, he was subsequently sent to France to prosecute the more advanced branches; and, on his return, in consequence of his father's reverses, he was early thrown upon his own resources. These resources were a well-stored mind, great self reliance, and a ready perception of the art of rising. Soon after his return from the continent, he attracted the notice of Sir Joseph Banks, by being engaged in a controversy with Sir James Edward Smith, late President of the Linnean Society. Sir Joseph favored the opinion of Mr. Lindley, and appreciating the ability of the young controversialist, he took him under his patronage, and through his influence he was employed by the Horticultural Society, to whose "Transactions" his father has been a contributor.

The Horticultural Society having determined, much against the wishes of many of its fellows, to occupy an extensive garden, finally arranged in 1821, for that at Chiswick.

The Garden required for its care a resident staff, and as Assistant Secretary of the Garden we find, in 1822, Mr. Lindley was for the first time announced as an officer of the society. As holder of that office, he had to superintend the collection of plants, and other transactions in the Garden, besides keeping all accounts and minutes of reports addressed to the Society's Council.

Mr. Sabine retired from the Secretaryship, and was succeeded by Mr. Bentham, Mr. Lindley continuing his Assistant Secretary.

Mr. Lindley's connection with the Horticultural Society, sustained by his undoubted great acquirements as as Botanist, aided his rapid upward progress. The Botanical Register, established by Mr. Sydenham Edwards, in 1815, passed in 1826 to the editorship of Mr. Lindley, having previously been under the management of his friend Mr. Bellenden Ker. The sound knowledge he here exhibited, as well as in his Rosarum Monographia, and Synopsis of the British Flora, published in 1820, fully justified the University of London in placing him in the Chair of Botany, from which, as Professor, he delivered his Introductory Lecture at the close of April, in 1829. In this he boldly made a stand in favor of the Natural System of Botany, and announced his intention of adopting it as the basis of his course of Instruction. Mr. Tegetmeier says, in a letter now before us: "I am a very old pupil of Dr. Lindley's. Twenty years ago I took his gold medal at University College, and maintained the superiority of his teaching by taking the silver botanical medal of the Apothecaries' Company, open to the competition of all the students in England. We have long been strangers; but I can truly say, as a lecturer, he was one of the best teachers I ever heard. Free and conversational in his manner, his matter was excellent, and methodically arranged. I entered his class with little knowledge of, and less liking for, Botany, and left it with the results that I have mentioned, having amongst my competitors Dr. W. B. Carpenter, Dr. Lankester, Dr. Jenner, etc."

In 1832 Mr. Lindley procured from a German university the degree of "Doctor of Philosophy." From that time he was known as Dr. Lindley. In 1838 he became Vice-Secretary of the Horticultural Society—a post which he has ever since continued to hold.

We have little more to chronicle of Dr. Lindley beyond a list of his principal publications, in addition to those already noticed, and they deserve the general criticism that they are all excellent.

In 1833 he published his Nixus plantarium (Approximations of Plants), and in 1838, Flora Medica, and Sertum Orchidaceum, besides reporting upon the short-comings at Kew Gardens.

In 1839 appeared his Ladies' Botany, and School Botany, and in 1840, his Theory of Horticulture—decidedly one of the best efforts to illuminate and direct practice by science.

In 1841 he published his Elements of Botany, and in conjunction with Mr. Paxton and Mr. Dilcke, founded the Gardener's Chronicle, over which he continues to preside as editor. The same year, also, he became Professor of Botany at the Royal Institution, and published, in conjunction with Mr. Hutton, The Fossil Flora of Great Britain.

In 1846 appeared his largest and valuable work, The Vegetable Kingdom.

We must here close our very imperfect notes, and will do so by expressing a hope that for many years to come our generation may benefit by the high botanical acquirements of Doctor Lindley.

A Coat of Mail.

Most deeply interesting is the History of the "Knight Templars," the "Knights of Malta," and other Royal robed Warriors of old, that left their homes, bearing the *knot* upon their breasts, given them at parting with those they held most dear. These Knights have passed away—they, and their achievements, are matters of history. We can look back upon them and their Saracen foes, as did those beautiful maidens to whom they were plighted; we, like the maiden gazing, can see their nodding plumes fast fading away in the distance; we can catch glimpses of their burnished shields, and their lance points gleam to us like stars. These Knights were betrothed to the *maidens* in *heart*; they are betrothed to *us*, in history. Bravely did they battle for *their* cause, nobly did they fight for *ours*; they battled for the Cross. Fearful as was the contest, bloody as was the strife, yet the history of those days comes down to us like a beautiful picture full of startling figures, standing out in bold relief, while the back ground shines forth in all its varied loveliness of light and shade, flowers and fruit, sorrow and joy.

These Knights went forth to battle in all the strength of a noble purpose, and full of faith—some *fell upon the field of battle*, some *returned victorious*, to enjoy the reward of their achievements. These Knights wore a *Coat of Mail*, and hidden beneath the outer garments lay the *Talisman*, that was to them "a pillar of fire by night and a pillar of cloud by day," and hidden from the gaze of *open* or *secret foes* lay the shining links of this life-preserver there; over the vital part, closely and perfectly fitted was this *Coat of Mail*, and when the contest came, however thick and heavy fell the blows, however swift the spear or lance flew, or however unerring the aim, harmless fell the weapon at the feet of the warrior, for he wore a *Coat of Mail*. The mailed Knight sought no undue advantage: the open, manly foe, he met in open field; the wily, crafty assassin, he was obliged to meet as best he may; *fear* he knew not, and *death* he feared not. He had entered the field prepared for battle, and "Victory or Death" was the motto of the mailed warrior. Happy is that warrior who always wears *a Coat of Mail*.

The world is a great battle field, and the people are all at warfare—all the devices of art and genius are used by the brave and noble to guard against defeat, but the brave and noble have secret foes, that like the wily savage or the cold-blooded assassin, strike in the dark, and strike from behind; from such attacks the ordinary weapons of war will not avail, and for *such* foes the warrior must wear a *Coat of Mail*. Even then, though the victory is certain, the mailed warrior will have the *appearance* of defeat—for a while—for his *outer* garments will be soiled and torn, and he will be stained by the blood of his foe; and although the struggle may be long, the result is sure, for victory ever belongs to him who wears the "*Coat of Mail*."

There were Knights in ancient days, and there are Knights in modern times—the former went forth to battle for their King, and for conquest; the latter go forth at the present day in all the walks of life, in all the varied pursuits and callings in which *wealth*, *fame* or *happiness* are to be the rewards of victory. Those who battle for wealth, their *coat of mail* is a "love of gold;" all their energies are given to its pursuit, regardless of every other object; but when the real contest comes, and they look to this shield for safety, lo! "riches have taken wings," and they are vanquished, pierced through with many wounds. Those who battle for *fame* wear a *coat of mail* of many colors, as many as the varied pursuits in which it may be worn, in all the professions that adorn life by the amount of usefulness they bestow; but the great road to fame in California has been that which the Politician sought. Almost all other pursuits have been sacrificed to this bought patronage and power, that led to wealth and then to fame; the *coat of mail* worn in this battle has been selfishness, and the war not in the open field, but one of schemes in ambush laid, where hired soldiers were often led by traitors and by traitors betrayed; and in the end, like Pharaoh's host, the horse and his rider are thrown into the sea, and the fame thus won would be oblivion. But the Politician who seeks true fame, must wear other armor. The Politician must become the Statesman—his *coat of mail* self reliance, while engraved upon its polished surface should appear in golden letters, "The People's unbought will." With such an armor he will go forth to battle with the patriot's watchword, "God and my country, victory or death;" armed thus he fears not, his cheek never pales, his step never falters, onward is the word—the van of the battle is his post, in the thicket of the struggle his sword is uplifted, and over and above all can be seen his waving plume swaying to and fro as his enemies fall on the right hand and on the left; and when the smoke of battle shall clear away, when the battle is ended and the victory won, that patriot warrior shall be found unharmed—his shield of "self reliance" is unstained, for its metal was pure—and now his example has diffused itself over the legion that surround him, and higher motives and nobler acts stimulate all, until every profession, guided by the true statesman, shall find that "true fame" is only found laboring to elevate a people and in promoting their best welfare, and not in self-aggrandizement alone.

Those who strive for Happiness are like the sentinels of a great army, they have the watchword, and none pass without it; the whole army are engaged in the battle, few only can give the countersign, and fewer only win the citadel.

He who seeks true Happiness, must wear a polished shield—upon it will appear that electric word, Home; yet from this fountain flow out streams of living water that can alone nourish, sustain and bring to bud and fruit the tree of life. If this fountain is pure, the fruit will be pleasant to the taste, and millions shall live upon it; if corrupt, then like the deadly Upas, death only can be the result.

Let men wear this *Coat of Mail*, let the Homes of the Pacific be what they should be, and from thence will issue men, full grown men, who shall go out into the world educated and prepared for the "battle of life;" and wearing this coat of mail, they shall be victorious. Every foe shall fall before them, and they shall be what men should be, Statesmen and Patriots, and thus they will secure to themselves Fame, Wealth and Happiness, that will never pass away—for the early germ was planted within the sacred circle of Home. Thus protected by this *Coat of Mail*, whose every link is like a silver chord, the heart makes music from within, as the singing bird which sends forth its notes of melody from the Home where it sings, protected by the shield which surrounds it.

New Music.

The following new pieces of Music have just been published by William Hall & Son, Broadway, New York:

Katie Strang—Scotch ballad; words by W. W. Fosdick, composed by W. Vincent Wallace.

I have Waited for thy Coming—ballad, composed by W. Vincent Wallace.

Some one to Love—ballad, sung by Mr. Percival, at Buckley's Opera House; words by James Simmonds, music by J. R. Thomas.

Bring me my Harp—ballad for the Piano Forte, or Harp; written by E. Fitzball, composed by Wm. Vincent Wallace.

Minnehaha, or Laughing Water Polka—by Francis H. Brown. Hesitation Polka—by do.

Horace Waters, Broadway, New York, has just published the following new and beautiful Music:

Acacia Waltz—by Miss Helen A. Child.

Aurelia Waltz—by F. W. Smith.

Tom Tit—as sung by little Cordelia Howard in her character of Tom Tit in "Dred," dramatized from Mrs. Stowe's novel.

Fanny in her Grave—song, words by W. M. Byars, M.D., music by F. W. Smith; one of the most touching and beautiful songs published.

Persons wishing collections of Music, will do well to order from these Houses; they always have the very latest.

Holloway's Pills are an excellent family medicine, and are recommended to all sufferers from diseases of the Liver and Stomach. It is indisputably admitted that they have never failed to cure these disorders. Sold at the manufactories, No. 80 Maiden Lane, New York, and 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box.

Important Decision.

We are pleased to learn that the more intelligent of the medical faculty are fast approaching a true estimate of Dr. Wesley Grindles' celebrated *Magic Compound*, for the treatment of all *Pulmonary* complaints. Some of our most conservative physicians, who have the greatest dread of quackery, have been compelled, by the sheer force of the evidence produced before their eyes to admit that the doctor *does cure consumption*, and strongly recommend the Compound to their own patients when all their own remedies fail. This is at once a compliment to the discoverer of this great medicine, and an assurance to the public that this Compound is indeed a "Magic Compound," and that it is destined to save the lives of thousands who would otherwise go down to early graves.

Like all great scientific discovers, Dr. Grindle had to contend with much prejudice, and encounter strong opposition; but, mighty in the consciousness of holding in his hands one of the most blessed boons to mankind, quietly, and without resort to the usual methods of trumpeting his discovery to the world, he took measures to show the excellence of his prescription by its actual working on the human lungs. Astonishment at first took possession of his enemies as they saw the wonderful cures effected by his Compound, and gradually they laid aside their prejudices, and became the doctor's friends, and the advocates of his cause—placing his name in that bright galaxy of great discoveries which spans the scientific world; and he has now the satisfaction of feeling that he is an acknowledged benefactor of his race, and his medicine one of the institutions of his country.

But the intelligence of this wonderful discovery has swept over the wide waters of the Atlantic, and orders are rapidly pouring in upon Dr. Grindle from every part of Europe for his invaluable renovator of weakened and decayed lungs. The English physicians, never so backward as their trans-Atlantic brethern in acknowledging merit, although it appear not in the *prescribed form*, at once have adopted and prescribe the Magic Compound. In fact, it is fast becoming, both in England and America, an integral part of Materia Medica.

We do not know but we may offend the modesty of Dr. Grindle, for we know him to be adverse to laudation; but we have ourselves seen enough to satisfy us that measured language will not do him and his medicine justice; and we have no hesitation in recommending the Compound in all cases of *Pulmonic Affection* and *Debility*.

For the information of those who may wish to avail themselves of this valuable remedy, we quote the doctor's prices as follows:

"Prices.—One box, $3; three boxes, ordered at one time, $8; half dozen, $14; one dozen, or any number greater, at the rate of $2 a box. The postage in the United States, not over 3,000 miles, is fifteen cents a box; over 3,000 miles, fifty cents a box. In all cases where the postage must be prepaid, the amount should be inclosed in money or stamps."

His general depots are at No. 54 White street, New York; and No. 70, South Third street, Philadelphia. All orders addressed to Dr. W. GRINDLE & BRO., to either the above places, will receive instant attention.—[N. Y. People's Organ and Advocate.

Coat of Mail.—We made a visit to the famous Dennis Wire Works, a few days since, and found the proprietor at work upon a real coat of mail, of silver wire. He was making it for a trapper, whose life was constantly exposed among the Indians in the far mountains. The coat of mail and the birds in the cages at the same place suggested the article, "Coat of Mail." Let all others go and see the coat of mail, and procure one of the right kind.

Wintering Cows.—At a recent Farmers' Club meeting in New York, a member made the following suggestions in reference to the wintering of cows:

"If I were to have cows wintered just to my liking, they should be fed on corn stalks, and if profit were consulted, these, by all means, should first run through a stalk cutter. This in my estimation, is a saving of at least one-fourth their value. My method of feeding is to give each animal a bushel basket full of chopped stalks; they will not eat them clean, but to save all, I throw what they leave in the mangers to my colts, who soon dispose of them, and without a remainder. Those cows which are in milk, are fed a slop of buckwheat bran, night and morning; those not yet come in are given two or three ears of corn at each feeding until they begin to spring bag, when they are fed once a day, the same as the cows which are milked. In this way cows may be kept in a thriving condition, and I belive a greater yield of milk and butter can be obtained than from any other mode of feeding."

As far back as the year 1852 the celebrated orientalist, Professor Forchhammer, of the University of Kiel, suggested in a speech to the assembled *savans* of Germany, at their annual gathering lately held at Wiesbaden, the possibility of constructing submarine charts on the same principle as the common geographical maps, with a shading of greater or lesser strength to denote the mountains and other inequalities of the bed of the sea. That gentleman has just now had a map on this principle, engraved. It is intended to illustrate a work of his now in the press on the Ruins of Troy, and represents the sea between the Island of Tenedos and the opposite coast of Asia Minor.—[Eng. paper.

We call the attention of farmers and mechanics to the advertisement of the "Farmer's Drill."

Editors Farmer: Stepping into those splendid Daguerreian rooms in Montgomery street, San Francisco, the day before the sailing of the last steamer, I was much interested in seeing the rooms of the Artist crowded with persons waiting their turn to obtain daguerreotypes. I counted forty-eight persons, in the brief space of half an hour. This crowd suggested the following, and I would ask if you will permit me a corner of your paper for these few stray thoughts:

THE TRIUMPH OF GENIUS.

The hour of Triumph! it has come,
For hurrying crowds with earnest will
Are gathered at the Artist's home,
A Tribute of his wondrous skill.

With ready eye, and studious care,
His genius stamps with Artist's power
Each "face Divine"—How truthful there
Are those you love, now loved still more.

But where this Artist? speak his name!
Let his proud Banner be unfurled,
For high upon the "scroll of fame"
Shall sound his name throughout the world.

The name of Vance shall bear the sway,
When thousands that now act, are gone;
They, like their works, shall pass away,
While Vance shall wear a victor's crown.

It is with very great pleasure we have it in our power to announce one of the most important historical works ever issued from the press. It is indeed what it purports to be, a great national work. "The Abridgment of the Debates of Congress, from Gales & Seaton's Annals of Congress; from their Register of Debates; and from the Official Reported Debates by John C. Rives—by Col. Thomas H. Benton, Author of Thirty Years' View. To be completed in 15 volumes, 8 vo., double columns, 750 pages each, comprising what is now contained in over 100 volumes. Price, $3 per volume. The first volume of this important National Work will be published about the first of January, and will be sold exclusively by subscriptions. From the strong interest shown by the public in the publication, we feel confident that a very large subscription list may be obtained, and that every town and village will furnish its quota of subscribers." We hope to see a work of this value in every Library and every Institution on the Pacific coast, as soon as possible after publication. That famous firm, D. Appleton & Co., are the Publishers.

SPECIAL NOTICES.

☞ **CHRISTMAS GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.

WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

A CARD.

☞ The Report of the Agricultural Society, for the year 1856, including the full Reports of the Visiting Committees to the Farms and Vineyards throughout the State, Reports on the Exhibition, the Annual Address of the President, Address of Col. J. B. Crockett, detailed list of the Exhibited Articles, the Prize Essay on the Potato, with other important matter, is now issued in a neat Pamphlet of about eighty pages, illustrated. Persons desirous of obtaining copies will please address the Office of the California Farmer, when copies will be forwarded as per order. Price Fifty Cents.

For sale at the Offices of the California Farmer, State Agricultural Society's Rooms, Sacramento—and at No. 130 Washington street, San Francisco. Also, at Ullman & Co.'s, J. W. Sullivan's, J. J. LeCount's, San Francisco; Dr. J. C. Cobb, and J. B. Manny, San Jose.

A PERFUMED BREATH

What lady or gentleman would remain under the curse of a disagreeable breath, when by using the "Balm of a Thousand Flowers" as a dentifrice would not only render it sweet, but leave the teeth white as alabaster? Many persons do not know their breath is bad, and the subject is so delicate their friends will never mention it. Pour a single drop of the "Balm" on your tooth-brush, and wash the teeth night and morning. A fifty cent bottle will last a year.

A Beautiful Complexion may easily be acquired by using the "Balm of a Thousand Flowers." It will remove tan, pimples and freckles from the skin, leaving it of a soft and roseate hue. Wet a towel, pour on two or three drops, and wash the face night and morning.

Shaving Made Easy.—Wet your shaving-brush in either warm or cold water, pour on two or three drops of "Balsam of a Thousand Flowers," rub the beard well and it will make a beautiful soft lather much facilitating the operation of shaving. Price only Fifty Cents.

THE LAW OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.

☞ Postmasters would oblige, by a strict fulfillment to the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.

Postage of the Farmer.—The Postage of the Farmer to any part of the State is only 6½ *cents per quarter, or 26 cents per year.* This is the lawful postage established by Congress, and when more is exacted it is a violation of law

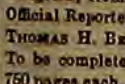
MISCELLANEOUS.

PACIFIC MUSEUM
Corner of Clay and Kearny streets.
INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!



THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly whose [illegible] his keeper has twice [illegible] VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Worf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 600 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montes.

☞ A full Brass Band is in attendance every evening. Open every day and evening (Sundays excepted).
. Admission 25 cents. v7-2

The Farmer's Drill.
[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 29th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.

Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.

This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

For full particulars address

Ladies' Department.

AT MY WINDOW.

BY MRS. MARY E. HEALY.

[The accompanying most felicitous effort of the author, from the Louisville Journal:]

Eyeing on the village street,
Gazing on the passers by,
Many faces meet my eye,
Telling each some tale to me.
Two kind the crowd I note—
Farmer with the homespun coat!
Well-dressed lady walking by!
Strength and Beauty meet each eye,
But by all save me, unseen,
Lady fair, it is thy due,
All our gallant country through;
Which from oldest to each charm,
Decking tastefully thy form,
Dost look, Gliding through the street,
Every poor that thou dost meet?

Come, fair lady, look with me
Far across you deep blue sea;
Are those creatures pale and wan,
Rising with the earliest dawn,
Toiling, Car those flowers so rare?
Nature's own seem scarce more fair:
Hair, fair lady, deck thy hair.
Pass not toiling half the night
See! upon those jewels bright,
Children shivering with the cold,
While yet young but looking old!

And in that rich lace I see
Blank eyes dimmed with misery,
And young cheeks all robbed of bloom,
Bending o'er that silken loom;
And thy tasty home, I'm sure,
Was bedecked by toiling poor.

Ah, I know thee—who thou art!
Or I might suspect that heart.
Well I know that merciless hand
Claws the lowliest in the land.
When the HEART the virtues bless,
Fear not thou too rich a dress!

Thou canst not avert the blows
Which unfeeling fate around them throws;
But within our own bright land
Thou may'st rest thy wearied hand;
From those eyes soft Pity's tear
Wounded hearts may soothe and cheer.

Farmer, with the homespun coat!
Forms of beauty round THEE float,
Rosy wife, with cheerful face,
Flitting round with rustic grace,
Turning with a nerve of steel,
All day long, the "spinning wheel."
Rosy children full of glee,
Now high in the apple tree;
Now in autumn's woods they go,
Where the "shell-bark" hickories grow;
And down they wade the stream,
Where the dancing minnows gleam.

Ripened fields of golden grain,
Waving like the rolling main;
Sunny meadows green and gay,
Where the snow-white lambkins play,
And where grows the scented hay;
Gamers full and running o'er
With the harvest's plenteous store.

And thy household band at night,
Gathered round the log-fire's light,
Listening oft to grandpa's lore
Of the dangerous days of yore,
When the savage from the wood
Broke upon their solitude.

Ye, whose narrow, soulless pride
From such toil would turn aside—
They whose every hour of toil
Is repaid by nature's smile—
Have ye ever known a bliss
Half so sweet, so pure as this?

Farmer!—but thy "team," I know,
Must have gone an hour ago;
Thou, fair lady, too, art gone,
And the hours are rolling on,
And my task must other be
Than to sit and dream of thee.

Corydon, Ind., December, 1855.

HER HEART'S NOT THERE.

Fairies dressed her for the bridal,
And wreathed her snowy brow;
They little heed the sorrow
That clouds her features now;
And there are smiles around her,
And glad sounds fill the air—
The supper hall is lighted,
But oh, her heart's not there!

He leads her to the altar,
And breathes into her ear
The tender vows oft spoken,
And answered by a tear.
She thinks of one departed,
And breathes a silent prayer,
And though the pledge she utters—
Still, still, her heart's not there.

She's left the home of childhood,
And mingles with the gay—
But scenes of joy and pleasures
Drive not her grief away.
Death lays his icy fingers
Upon her brow of care—
The grave receives a mourner—
A broken heart lies there!

EDUCATION OF DAUGHTERS.—Since there is a season when the youthful must cease to be young, and beauty to excite admiration, to learn how to grow old gracefully, is, perhaps, one of the rarest and most valuable arts that can be taught to women—to lay down beauty, who have nothing else to take up. It is for this sober season of life that education should lay up its rich resources. However disregarded hitherto they may have been, they will be wanted now. When admirers cease and flatterers become mute, the mind will be driven to retire into itself, and if it find no entertainment at home, it will be driven back again with increasing force. Yet, forgetting this, do we not seem to educate our daughters exclusively for the transient period of youth, when it is to maturer life we ought to advert. Do we not educate them for a crowd, and not for themselves? for show, and not for use? for time, and not for eternity?—[Mrs. Moore.

A Voice from the Sea.

THE letter from our friend and former correspondent "B." which we annex, will be read with much interest. The claims of a family required him to return to the East, and leave the "Land of Gold." His home in the Empire State was of more value to him than the uncertain wealth for which men toil here. That home was his empire; there he was enthroned a monarch in the affections of those he loved. Much as we regret that he should have left without attaining what he sought here, he is and will be richer there.

The CALIFORNIA FARMER will still be the medium through which he will hold converse with those to whom he was allied here by social and intellectual bonds, and we trust those to whom he has now appealed—Alice, Bessie, Katie, E. M. S., Old Block and Agricola, will not fail to respond to this "Voice from the Sea." We believe there is a sympathetic chord in kindred minds, that when touched reveals intellectual music; and our own sympathies go out to meet our friend, in the warmest wishes for his safe arrival at his home, where we know warm and true hearts await him; and we trust years of peace, prosperity and happiness shall be his to enjoy with them, and we know the same wish will be sent from those he has so kindly remembered.

Our columns will be the medium of future communion with our friends and our readers, and this will afford pleasure to all.

To the Editors, Readers, and Correspondents of the Farmer:

I introduced myself rather abruptly to you, some months ago, and have been a frequent visitor to your domicils ever since. I have presented to your notice many topics deemed of interest and importance to all well wishers of the State. I regret that I have been compelled, from the circumstances by which I was surrounded, to write in a hurried manner, and to often do injustice to the subject discussed.

Alice, Katie King, Bessie, E. M. S., Old Block and Agricola, seem like old and tried friends. The first object of interest to me in the FARMER is to look for one or all of the above names, and all the articles from their pens are read with great pleasure and interest. The various topics introduced by them, serve to cheer one in the midst of life's rugged path.

Man's every-day toils harrass and perplex the mind, and sooner or later break down the machinery of the body, which in its irregular and imperfect action deranges the mental economy, and very often paralyzes the whole man and renders him unfit for the severe, but ever-varying, duties of life. Whoever can throw a sunbeam across the thorny road we are compelled to tread, whoever plants a single flower that spreads its gay petals to the sun and perfumes the air with its rich fragrance, is thus far a benefactor to the human race.

The fair correspondents of the FARMER have woven many a garland of beauty to embellish its columns, and have added much to interest the reader, by their numerous articles, familiar home scenes. So vividly are they drawn, that many are constrained to exclaim, "Oh! that I were young again."

When the ladies of any country are able and willing to contribute to the columns of journals sustaining the great industrial interests of the country, there is a bright foture in store for that country. Our male writers have added to the literary wealth of the world far more largely than any other nation of the same age. At the same time our female writers have blended the graceful with the strong, and twined many wreaths of perennial beauty around the magnificent structures reared by stronger hands. Our female writers are enriching our national literature in many departments, in which they sometimes bear off the palm from the sterner sex.

Many of our fair countrywomen in California wield gifted pens, and may be justly considered as exerting a wide-spread influence for good in the State. Katie King! have you laid aside your pen? are we to hear from you no more? are there no themes, or no interests that can induce you to resume your labors, and lead your readers with the sprightly flow of your thoughts, as they gush forth in sparkling beauty, and elevate and cheer the heart in many a lonely hour? You surely can do much to cheer on those who are toiling around you. Do what you can, and you will promote your own happiness by contributing to that of those around you.

And Bessie, where is your pen? Why does your genius seek to hide itself, and not give free scope to your mental activity? You may add something to the happiness of some one whose face you may never behold. Into the rugged mountain gorge, into the miner's lonely cabin, or to the dwellers on the ranch, your pen may carry comfort and hope, and thus cheer many a lonely dwelling. Why not use it then?

Alice sometimes peeps down from her mountain home, just to see how the denizens of the cities, valleys and plains are progressing in life's journey. We suppose that the snowy mantle has long since been thrown around her dwelling, and that she peers forth upon the wintry sky with the stars blazing around the mighty dome that bends over and around her. But when the fleecy drapery passes away, and spring spreads her gorgeous carpet of flowers upon hill and plain, let us hear again, Alice, will you not?

E. M. S.: Why sweep those mournful strings so long? Why call up around you, by your magic pen, those wailing notes of sorrow, that cast a cloud of sadness upon the hearts of those who read, and invest all you write with a peculiar charm, tinged with woe. Those who read them love to linger under their spell, as they would around a crushed flower, lovely in its ruins, throwing around you its last and choicest perfume as it passes away from the gaze of mortals.

Life has more of joy than of sorrow, more of good than of ill. We live in a bright and beautiful world. There is more of sunshine than of shade, more beauty than deformity. Look then, I beg you, upon the smiling landscape and the sparkling stream, and from them up to nature's God, and rejoice.

I see Old Block peeping out from behind bags of gold and express matter, wondering what I am to say to him. Did I not know him personally, I should hardly dare address so renowned a personage. But having seen a part of the "proof" of his last letter to Alice, I am fully persuaded his heart is all right, and that he can write better *with* spectacles, than many can without them. As he is a banker and wishes short yarns and good security, I will just say to him, continue as you have begun, in well doing, and you will have your reward.

With diffidence and profound respect I mention the name of one who has contributed so much to the columns of the FARMER. His articles are rich in classic lore, are filled with massive gems of original thought, wrought into an unbroken logical chain by a master mind, and polished with the practiced skill of the rhetorician's hand. May he long be spared to enrich your columns with his varied and useful knowledge.

It will ever be a source of regret to me, that I could not have had the pleasure of clasping by the hand the veritable AGRICOLA, the correspondent of the CALIFORNIA FARMER, under the bright skies of the glorious Golden State. My first greeting and farewell to him come from the sea.

CHRISTMAS MORNING,
Steamer Sonora, off Cape St. Lucas.

This will notify the reader of the above, that I am no longer in California, and it remains for me to say, that I have no expectation of ever beholding that glorious land again. Ties and duties, paramount to all that California can ever impose upon me, imperatively demand my presence at my distant home.

I am now on my way to that home after a long, and, to me, painful absence. I too, have daughters and sons, who morning and night kneel before heaven's high altar and pray for God's blessing upon their dear father in California. One who has never seen the form of her father, nightly, as she rests her little head upon her pillow, falls asleep with the words, "God bless my dear pa-pa," lingering upon her rosy lips.

To such fond and loving hearts, I am now returning, after long years of wandering, anxiety and toil. Who can blame me for tarrying no longer in the beautiful land of the Occident.

Though I shall probably never hold any personal converse with any of you again, yet I hope occasionally, through the columns of the FARMER, to chat awhile with my old friends, if our mutual friend the Colonel shall think my yarns worth the space they would occupy in his paper.

Wishing you, one and all, long life, health, prosperity and happiness, I am, as ever,

Yours, B.

The Lights and Shadows of Memory.

FEBRUARY 14, 1856.

THIS is Sunday morning! and with it comes a strange kind of melancholy, I know not what.

A thousand tender recollections crowd upon my thoughts, and then depart like clouds, that chase each other along the moonlit sky—now light, now dark, and yet an unchanged cold and gloomy aspect o'ercanopies all.

And yet, how often—oh! how often, the memories of days that are gone, long ago—aye, to return not—recalled to my mind the sweet dreams of my early childhood, wherein was hope, friendship and love—all now melted away like a fairy frost-work. Alas! farewell, ye light dreams of my fancy; ye have faded and gone, and with ye, my childhood hopes and the friends I used to love so fondly—among the things that were. Gone from all save their sweet memory, whereon I love so much to dwell. Yea, I love to gaze sometimes on the past—on those long-cherished memories, which fade not, which deceive not, which cannot betray. In thee alone there is truth; and though to call up the past from the deep and oblivious bosom of years that have flown, wherein day by day it has been quietly inurned, doth ofttimes fill my heart with overflowing tears, that, ere they reach my eyelids, fall within the deepest, tenderest recesses of my very soul, as if to scorch the few sweet hopes that still linger there.

Yet still, amid the ills of life, it is pleasant to look back upon the past; and however much there may be of sorrow or affliction mingled with it, still there is so much I love, so fondly and so dearly, that when I review the traces still so fresh in my mind, and think how tenderly, oh how tenderly, I have watched over those that have gone to join the innumerable hosts whose spirits have now passed to the pale, cold realms of death's eternal shade—it is then, O then, that I could wish to quit this vale of misery and woe, and become a part of what men call—Memory.

RAPHAELINA.

MAN AND WOMAN.—M—Man is a Marvelous and Matchless Model of Mechanism; a Mutable Mass of Mirth and Misanthropy; Merry Midst Mourning, Mournful Midst Mirth. Man Mars his Mundane Mission by Mixing in Monstrous Mummeries, Mindless of the Meek Monitions of his Mighty Master, Mildly Misprising his Mild and Moderate Mandates Mid the Manifold Manifestations of the Multiplied Mercies Meted out by his Maker. Muse, then, Misguided Mortal, on the Magnitude of thy Misdemeanors, Mind not the Meretricious Machinations of Malevolent Ministers, but Merit the Meed of a Merciful Mission.

W—Woman, Who, Whilome Was Wrought upon by the Wheedling Words of the Wily one, since When the World Weeps o'er its Wickedness. Wanting Women, the World Were a Waste and We Wending our Weary Way through its Wilderness, Would Waft our Wailings to the Winds and Waves. Woman, Without thy Winning Ways, Wealth Were Worthless, a Will o' the Wisp. The Witchery of thy Wooing Words Works Wonders like the Waving of the Wizard's Wand; Witness thy Weariless Watchings o'er the Wounded and Wretched, Withstanding our Waywardness through Weal and Woe. Wanton Waddlers on the Wane, Writhing under Wrinkles, may Wage a Warfare with, but the Wise Welcome and Worship thee.

AGRICULTURAL.

WIRE FENCE,

FOR

Farms, Highways, Railroads, Cemeteries, Gardens, &c.

THE results of experience and the theories of science all attest that this mode of fence is superior to any heretofore in use, in economy, strength, closeness, elegance, portability and durability.

This fence is varnished with asphaltum varnish, which protects it from rust, and imparts to it a beautiful black color. It is perfectly secure as a barrier against farm stock; does not catch the wind; indestructible by fire or freshet; does not confine the heat, but admits freely the solar rays; does not occupy the soil, or harbor vermin, as stone walls and quickset hedges do; requires no repair, save a coating of varnish once in four or five years, and possesses sufficient elasticity to enable it, without the least injury, to experience that expansion by the heat of summer, and that contraction by the cold of winter, which have been so fatal to other modes of iron fence.

Each roll contains Twenty Rods, sixteen and a-half feet per rod. The fence is secured to the posts by staples (hook-headed screws); one staple over each lateral wire, at each post. The posts are of the usual strength, and are of wood, though they may be of iron or stone; they are set ten feet apart; and no rails are required.

The following kinds of this fence are most in use; and the prices annexed are the retail cash prices:

No. 1, 3¼ feet high, 3 inch mesh, 4 lateral wires of No. 10 wire, body of No. 14 wire, $2 00 per rod.
No. 2, 3¼ feet high, 3 inch mesh, 2 lateral wires of No. 10 wire, body No. 14 wire, $1 75.
No. 3, 2¾ feet high, 3 inch mesh, 3 lateral wires of No. 10 wire, body of No. 14 wire, $1 50.
No. 4, 2¾ feet high, 3 inch mesh, 2 lateral wires of No. 10 wire, body of No. 14 wire, $1 37½.
No. 5, 1¾ feet high, 3 inch mesh, 2 lateral wires of No. 12 body of No. 15 wire, $1 75.
No. 6, 3¼ feet high, 6 inch mesh, 4 lateral wires of No. 10 wire, body of No. 12 wire, $1 25.
No. 7, 3¼ feet high, 6 inch mesh, 2 lateral wires of No. 10 wire, body of No. 12 wire, $1.
No. 6, Extra, 3¼ feet high, 6 inch mesh, 4 lateral wires of No. 8 wire, body of No. 11 wire, $1 50.

Nos. 1, 2, 3, 4 and 5 are most used for Gardens, Cemeteries, Trellises, and other places where beauty is the quality most desired. Nos. 6 and 7, and No. 6 Extra, are best adapted for Farms, Railroads, Highways, and for other purposes where strength and efficiency are the most necessary qualities.

J. E BUTTS, JR., & CO.,
(Successors to the L. W. Fence Company),
v6-9 3m No. 38 Water street, Boston.

L. P. & W. F. DODGE'S
DOUBLE ACTING PUMP.

(Patented June 7th, 1853.)

THESE Pumps are double acting, and combine both the Suction and Force Principles. The Pistons are of the best bell metal composition, making them available for use in either hot or cold liquids.

The Cylinder is without divisions or chambers, has no valves at the eduction port, and is bored out perfectly true and smooth. From the construction of the cylinder and water passages, the pistons require no packing, being fitted perfectly to the cylinder. Two important evils in Pumps generally, are thus overcome—viz: the amount of power required to work them, and the wear of the packing. The cylinder and pistons being perfectly true and smooth, it naturally follows that there should be less friction, and, consequently, less wear, than in pumps generally.

The water enters the cylinder upon its side, at each end alternately, passes through the piston heads, and is discharged through the round air-vessel in the center of the pump. These pistons are each furnished with a valve, connected in such a manner that both must operate simultaneously, one valve opening at the precise moment the other closes; consequently these pumps may be run at higher speed than pumps generally.

These pumps have received numerous Medals, Diplomas and commendatory notices from various State and and County Fairs, including Medal and Diploma at the Crystal Palace Exhibition in New York

The power of a single individual applied to the size usually furnished for family use, is sufficient to draw water from a well twenty-five feet deep, and throw it upwards of fifty feet from a hose-pipe, rendering it a very efficient FIRE ENGINE, ready for use at any moment.

Circulars containing full information relative to size, prices, &c, may be obtained by addressing the

SEEDS, &c.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; NEW ORANGE WATER-MELON; RING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE,
OR,
SORGHO SUCRE.
PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 50 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,
W. P. ORME, Atlanta, Georgia.
ATLANTA, November 7, 1855. v6-22

SEED WAREHOUSE,
110 CALIFORNIA STREET.

THE undersigned, Importer and Dealer in FIELD, GARDEN AND FLOWER SEEDS, is constantly receiving by every Steamer and Clipper from the States, fresh supplies of all kinds of

Field Seeds, Garden Seeds, Flower Seeds,
Bird Seeds, Tree Seeds, and Roots;

MEDICINES, &c.

J.L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

THE LION CO. BREWERY,

No. 136 Pine street, San Francisco.

Constantly on hand a stock of

ALE AND PORTER,

FIRST PREMIUM AGAIN!

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,

SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that o'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

MEDICINES, &c.

FOR THE REMOVAL AND PERMANENT CURE OF

All Diseases arising from an Impure State of the Blood or Habit of the System.

In this preparation the [illegible] medicinal properties of Sarsaparilla, combined with the most efficient alterative aids, the most salutary production of the vegetable kingdom; and the combination is such that one modifies and improves the other, producing a compound differing entirely in its character and properties from any other preparation, and unrivalled in its operation on the system when laboring under disease. It has been so fully tested, not only by patients themselves, but also by physicians, that it has received their unqualified recommendation and the approbation of the public; and has established itself upon a reputation for great use and efficacy far superior to the various compounds bearing the name of Sarsaparilla.

From the Army.

MONTEREY, CAL., January 18, 1859.

MESSRS. A. B. & D. SANDS—Gentlemen—I feel [illegible] to add my testimony in favor of your invaluable medicine, hoping it may lead some other [illegible] to a trial of it, and that they may be benefited as I have been. I arrived here by the overland route, about the first of October last. A few days after I was attacked with a very distressing cough [illegible], which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine [illegible] I procured a bottle, which had the desired effect of removing my difficulty entirely.

With high regard, Yours, &c.

New Books Received.

MARRYING TOO LATE, a Tale, by Geo. Wood, author of Peter Schlemihl in America, and Modern Pilgrims. New York: D. Appleton & Co.

HOME AND THE WORLD, by the author of Souvenirs of a Residence in Europe. New York: D. Appleton & Co.

MEMOIRS OF WASHINGTON, with illustrations; by Mrs. C. M. Kirkland: Appleton & Co.

MAN-OF-WAR LIFE, a Boy's Experience in the U. S. Navy, during a voyage made round the World in a Ship of the Line; by Charles Wordhoff.

THE MERCHANT VESSEL, a Sailor Boy's Voyages to see the World; by same author.

WHALING AND FISHING; by same author.

The above series are just published by Moore, Wilstach, Keyes & Co., Cincinnati, Ohio. There have been no better works written upon a seaman's life since Dana, and are admirably adapted for young people interested in traveling adventure, containing a vast amount of information and the truest description of a seaman's life.

[Copies of each of the above were received by the last steamer, and of which we shall make more mention in future.]

NEW PUBLICATIONS.

The Farmer and Emigrant's Complete Guide, or Hand Book—with copious Hints, Recipes and Tables, designed for the Farmer and Emigrant; by Josiah T. Marshall: Published by Applegate & Co., Cincinnati, Ohio:

A most valuable work, especially for settlers and emigrants, containing important articles especially adapted to their life, derived from the best sources in the country; some of the articles of greatest value are from the Transactions of the N. Y. State Agricultural Society, and from standard Miscellanies, thus combining a complete directory and guide which has long been desired for the emigrant. Full descriptions relative to purchasing and clearing timber land, prairie farming and general management of a farm, also the diseases of cattle, sheep and swine, and the methods of treatment and cure, are fully given. A medical department, with useful hints for the treatment of wounds, bites, etc.; chapters on the fruit garden, fruit trees, etc.; with a glance at the Constitution of the United States, and a whole miscellany of recipes, etc., for the household department.

WHEN WILL THE PIANOS COME BACK?—The increase of travel on the steamers up and down the Sacramento river, and the handsome profits now received by the California Steam Navigation Company, will induce them, we trust, to return the *Pianos* which once added so much to the pleasure of a trip on the river, and at the same time gave such a social look to the handsome saloons of the steamers. We understand that the New Steam Company intend to place Chickering's best on each of their boats, on the first trip, and to add a collection of music of the very best and latest authors.

SERENITY of mind is nothing worth, unless it has been earned; a man should be susceptible of passions, and able to subdue them.

INFORMATION WANTED—Of CHARLES DOUGLAS CLARK, a native of Aberdeen, Scotland. When last heard from (11th June, 1854) was at Salmon River, Shasta county. Any information regarding said person will be thankfully received at the office of this paper, 130 Washington street, San Francisco.

Pennsylvania State Elections.
"EXCELSIOR."
IMMENSE ATTRACTION
AT
WALTER & TOMPKINS,
No. 170 Montgomery street.

BY the arrival of the "Golden Gate," bringing the news of the Election in Pennsylvania, Walter & Tompkins have received an invoice of splendid goods, in addition to their already elegant assortment.
Only Look in their Windows!
If you wish to see the choicest selections of CASHMERES and VESTINGS in this City,
FRESH FROM THE ATLANTIC STATES!
G. F. Walter, having returned, can now be found at his post, ready to serve his friends and the public generally, having been employed constantly during his absence in New York in catering to the taste of his numerous customers.
It is now conceded that W. & T. have not over-reached their motto, that they are entitled to be called the
"EXCELSIORS OF THE PACIFIC."
At their place can be found, at all times, the latest makes of European fabrics, fresh from the looms of the factors.
In addition to the piece goods you can obtain
CUSTOM MADE CLOTHING
From the well known house of
CRONEY & LENT, 753 Broadway, New York.
All the Clothing sold by W. & T. is manufactured expressly to their order.
New style Raglan Overcoats, of light and heavy material; and those splendid FROCK COATS that have taken, and still keep the lead.
GENTLEMEN'S FURNISHING GOODS
Of every description. Particular attention will be paid to this branch of the business.

REMOVAL.
Mercantile Library Association.
THE ROOMS OF THE ASSOCIATION, being those formerly occupied by the Pacific Club, on the corner of Montgomery and Jackson streets, over the Banking House of Messrs. Pioche, Bayerque & Co., will be thrown open to the public on Monday next (15th of December instant). The rapidly increasing extent of the Library and the constant accession of members, rendered it imperative that more spacious apartments should be secured for the purposes of the Institution. The new rooms will afford ample accommodations and will be fitted up with every regard to comfort and convenience. A GALLERY OF FINE ARTS will constitute a new and attractive feature in the new rooms, and the attention of citizens and others having Paintings and other Works of Art in their possession, is respectfully called thereto; all such objects will be received and receipted for; they will be conspicuously displayed, and will be at all times subject to the order of the depositors. To artists especially this will afford a favorable opportunity to exhibit their works; and the Directors cordially invite them to avail themselves of the advantages thus offered.
Books of Reference, Maps, Charts and Manuscripts would be gladly received on the same conditions; also, Natural Curiosities and Specimens for the formation of a Cabinet.
In order to allow proper time for the removal and rearrangement, the Library and Reading will be closed from this date, until Monday, December 15th. v6-24

To Florists, Nursery and Seedsmen, and Others.
WANTED, by an Englishman, forty years of age, a situation as GARDENER. I am an industrious and thorough practical Gardener, in all its branches, having propagated and grown Camellias, Ericas, Fuchsias, and Azalias, and many other kinds of Greenhouse plants, and a great many kinds of Evergreen, Forest, Fruit and ornamental Shrubs and Plants. I am expert and successful in budding and grafting, having had a large practice at it in an English Nursery; can weigh and put up seeds, with most people for quickness; can write a good plain hand, and my character is unimpeachable. Should any gentleman want such a person I am willing to engage with him for moderate wages, and he will find me quite equal to what I have said of myself, when engaged.
Please state what wages would be given, &c.

[PREMIUM ORNAMENTAL NURSERY.]
Mountain View Nursery,
Three-Quarters of a Mile from San Jose.

THE Proprietor offers for sale the present season a large stock of fine Fruit and Ornamental Trees, Vines, Roses, Evergreens, and every variety of Garden Plants.
Particular attention is paid to the cultivation of Native Trees, and particularly the Evergreens of California, which are as fine as the world can produce.
A very fine collection of extra fine Roses are worthy of especial notice.
The Proprietor, having been in previous years connected with his brother in the United States Nursery, on the new Mission Road at San Francisco, and having former experience, is confident of pleasing all who may favor him with their patronage, which is respectfully solicited.
WM. O'DONNELL.
v6-21 3m

FRUIT TREES! FRUIT TREES!!
Oak Grove Nursery, Alameda.
THE subscriber, whose stock consists of the finest varieties of FRUIT TREES, imported from the Nurseries of HOVEY & CO., Boston, and now from one to four years old, many in bearing the present year, consisting of—

Dwarf Pears	20 varieties.
Plum	12 "
Apricot Plum	6 "
Foreign Figs (now in fruit)	7 "

All the best varieties of Apple, Peach, Nectarine, &c.
3,000 Los Angeles Grape Vines, now in fruit, three years old.
Strawberry Plants, &c.
Persons wishing to furnish their grounds will do well to visit the above Nursery and select for themselves, bearing in mind that to insure the healthy growth of a tree, it should be transplanted in the fall.
For particulars inquire of S. L. PALMER & CO., agents, corner of Washington and Davis streets, San Francisco, or to
v6-10 3m GEO. B. COOK, Proprietor.

United States Nursery,
On the New Mission Road, San Francisco.

THE Proprietor of this large Nursery and Garden desires to call the particular attention of the friends of Horticulture to the collection now offered, among which are the following:
Fruit and Ornamental Trees;
Roses, of every choice variety;
Green-house Plants, and Garden Plants.
Together with every article needed in Orchard, Garden, Greenhouse, Parlor or Garden.
The undersigned would most respectfully invite purchasers to visit his Garden and Greenhouses. Having been long established in the business he is confident he can furnish everything desired, as agreeably as any other establishment.

This establishment comprises the most extensive collection in the Union.
Priced Catalogues at the lowest rates will be sent to applicants.
N. B.—Apple, Pear, Peach, Plum, Cherry, Quince, Almond, Prune, Apricot and other Fruit Seeds in any quantity. v6-5

Pioneer Nursery.
THE undersigned, proprietor of this now well established Nursery, to which was awarded the First Premium by the State Agricultural Society at its last Annual Fair, announces to his friends and patrons that he is prepared to offer them, the present season, a collection of Fruit and Ornamental Trees equal to any in the country, and far superior to any heretofore offered.
Having had in bearing last year, forty-seven kinds of Apples, and having in bearing the present year, about thirty-five varieties of Peaches, added to the knowledge we have acquired by comparing them with other varieties grown in various localities, we have been enabled to ascertain with certainty what kinds are worthy of culture, and such varieties only do we offer to the public the present season.
We call your attention particularly to our Seedling Peach, named by the Academy of Natural Sciences, "Myers' Rareripe," which we offer this season for the first time. The following certificate will speak for itself:
ALAMEDA, July 25th, 1856.
The subscribers having seen and eaten of the new variety of Peach grown by A. H. Myers, in his "Pioneer Nursery," Alameda, and by the Academy of Natural Sciences of San Francisco named "Myers' Rareripe," do cordially and unhesitatingly pronounce it a most valuable acquisition to the Pomology of our State, in regard both to its early ripening, and its melting, luscious qualities, being in these respects superior to any variety of Peach that we have yet met with on this coast.
George Lee, Lee's Garden, Oakland.
Henry Gibbons, M. D.
N. W. Palmer, firm of Sonntag & Co., Horticulturists.
T. J. Nevins, Amateur Gardener.
A. M. Crane, County Judge.
Wm. Sherman.
We speak to our friends and patrons thus early, that they may be apprised of our ability to supply them with all the desirable varieties of Fruits, and thus save the trouble and expense of sending out of the country for Trees; and we can assure them that time and money will be saved by giving us a call.
Our stock embraces—

40,000	Apple Trees, forty varieties, one, two and three years old;
30,000	Peach Trees, in bud, best varieties;
4,000	Peach Trees, two years old, "
1,000	Pear Trees, "
1,000	Cherry Trees, "
1,000	Plum Trees, "
1,000	Apricot Trees, "
1,000	Nectarine Trees, "

Also, Almond, Fig and Quince Trees;
25,000 Currant Bushes, with a sprinkling of everything rich and rare, usually found in a well regulated Nursery.
We particularly invite our citizens to our Nursery and examine for themselves before purchasing elsewhere. Information respecting the best varieties of fruits, and the planting and pruning of them cheerfully rendered.
A. H. MYERS,
v6-19 3m Pioneer Nursery, Town of Alameda, Alameda Co.

Smith's Pomological Gardens
AND
NURSERY.
On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of
Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants
to be found in any one establishment on the Pacific Coast.
Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.
FRUIT TREES—fine, vigorous, and in every variety of the following:
Apple, Peach, Pear,
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.
ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.
Among the fine Trees are the following varieties:
Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.
Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.
We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.
ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.
Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.
GARDEN SEEDS.—1,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.
☞ Catalogues furnished to applicants.
☞ Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.
A. P. SMITH.

NOTICE.
We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.
Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.
☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.

To Architects.
PLANS ARE SOLICITED FOR A HALL FOR THE MECHANICS' INSTITUTE.
THE HALL to be in size—seventy feet front by one hundred and twenty-five feet in depth, three stories high above the basement; the first story to be designed for Stores, the second for a Public Hall the entire length of the building, and the third Miscellaneous. The Hall to be situated on a corner lot, seventy feet front by one hundred and thirty-seven and one-half feet in depth.
Plans for the above will be received up to the FIRST DAY OF MARCH NEXT, and for the set of plans most appropriate, and best adapted to the wants of the Institute, the sum of Three Hundred Dollars will be paid in the Stock of the Institute, when such plans shall have been adopted by the Board of Directors.
N. B.—Architects will accompany their plans with the necessary explanations, and the probable cost of building, and in no case must their name appear on either plan or explanation; but may be designated by a private mark, by which they may be identified by a duplicate.
By order of the Board of Directors.
G. D. STREET,
Chairman of Committee on Buildings.
Hall of the Mechanics' Institute, Dec. 1st, 1856. v6-24

EDUCATION.

Benicia High School.
THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by CORNELIUS J. FLATT, a graduate of the New York State Normal School.
This is the oldest Boarding School in the State.
The next Semi-Annual Session will commence on the 17th of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.
A daily account of recitations and deportment will be kept and sent monthly to parents.
The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.
TERMS: PER MONTH.

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective, Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.
No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.
For further information or references, address the Principal.
v6-24 C. J. FLATT.

Young Ladies' Seminary, Benicia.
MISS MARY ATKINS, : : : : : : PRINCIPAL.
THE School Year of this Institution is divided into two terms of five months each; but the term commencing January 5, 1857, will close May 1st, 1857, in order that the semi-annual vacations may take place hereafter in May and October.
At the close of each term there will be a thorough examination of the pupils in all of their studies.
The Course of Instruction is such as is usually pursued in High Schools, and also includes the accomplishments of Drawing, Painting, Vocal and Instrumental Music.
The government of the school is gentle, but decided. A daily account of the recitations and deportment of each pupil is sent, monthly, to the parents, who are thus regularly informed of the progress of their daughters.
All of the pupils board either with their parents or at the seminary, and are under the special care of their parents, or of the teachers of the Institution.
The School is open to inspection at any time, and friends are cordially invited to visit it; but no pupils can receive calls from any persons, excepting those introduced by the parents and guardians to the principal.
TERMS: PER MONTH.

Tuition in the Higher English Studies	$8 00
" " Common "	6 00
" " Music and use of Instrument	10 00
" " Ancient and Modern Languages	5 00
" " Drawing and Painting	4 00
For Board (per week)	6 00
For Washing (per session)	25 00

No extra charge will be made for Vocal Music or Embroidery: neither are the pupils required to furnish their rooms, bedding, &c.; but each pupil must have every article of clothing distinctly marked with her name.
Payments are to be made invariably at the beginning and middle of each term, in advance.

THE
"HORTICULTURIST"
AND
Journal of Rural Art and Rural Taste.
CONDUCTED BY A. J. DOWNING,
Author of "Landscape Gardening," "Designs for Cottage Residences," "Fruit and Fruit Trees of America," "Country Houses," etc.
Edited by J. JAY SMITH, Editor of the North American Sylva.
THIS popular publication, which is gradually extending its influence throughout the country, and is becoming indispensable to the tasteful Gardener, the Fruit Culturist, and the Floriculturist, will be continued under the editorship of J. Jay Smith, whose ability and taste in matters of country life are highly appreciated through the country.
The cultivation of the beautiful, both in Nature and Art, is justly esteemed an important element in education, and recommends itself to the attention of all who wish to make their dwelling and grounds attractive, and to surround themselves with those luxuries and adornments that spring from the fruitful bosom of the earth when cultivated by the practical hand. The typographical execution of the HORTICULTURIST is designed to be an index to its contents—neat, chaste and elegant. It embraces within its scope—
I. THE DESCRIPTION AND CULTIVATION OF FRUIT AND FRUIT TREES—a subject of vast importance, and in which we are already more interested than any other people.
II. THE DESCRIPTION AND CULTIVATION OF FLOWERS AND FLOWERING PLANTS AND SHRUBS, from the most delicate and tender to the most hardy and robust.
III. TO THE DESCRIPTION AND CULTIVATION OF ALL EDIBLE PLANTS, which are, or should be, grown in our gardens.
IV. TO GARDENING AS AN ART OF TASTE—with Designs for Ornamental or Landscape Gardening.
V. TO RURAL ARCHITECTURE—embracing Designs for Rural Cottages and Villas, Farm Houses, Lodges, Gates, Vineries, Ice Houses, etc., etc.
VI. TO AGRICULTURE—or the Planting and Culture of Forest and Ornamental Trees.
VII. TO BOTANY AND ENTOMOLOGY—so far as these branches are connected with the general subjects to which the work is specially devoted.
The extended and valuable correspondence of THE HORTICULTURIST presents the experience of the most intelligent cultivators in America; the superior illustrations, and the instructive and agreeable articles from the pens of the editor and contributors, make it eagerly sought after by even the general reader interested in country life. To all persons alive to the improvement of their gardens, orchards, or country-seats—to scientific and practical cultivators of the soil—to nurserymen and commercial gardeners, this Journal, giving the latest discoveries and improvements, experiments and acquisitions in Horticulture and those branches of knowledge connected with it, will be invaluable.
A New Volume (12th year) commences with the January number for 1857; and it will be the constant aim of the editor and publisher, by every means in their power, to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.
The work is issued on the first of each month, in the best style of the periodical press, each number containing 48 pages, embellished with a frontispiece and several other original and well-executed engravings. At the end of the year it will make a volume of six hundred pages, beautifully illustrated with over 100 engravings, many of them drawings of fruit and flowers from nature. These volumes, if taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature.
TERMS—Two Dollars a year—Four Copies for Six Dollars, payable in advance.
An edition is published with plates colored in the best style of the art—Price, $5.

IMPORTANT TO INVENTORS!
LOW, HASKELL & CO,
SOLICITORS OF PATENTS AND PUBLISHERS
OF THE
"INVENTOR."
304 Broadway, New York.
PREPARE the necessary Drawings and Papers, and prosecute to a successful issue, applications for Patents in this country and in Europe. Inventors and others desirous of securing Letters Patent, need not incur the expense of a visit, as by sending a sketch of their invention, with a proper description, their business will be faithfully transacted. Fees moderate and no charge for original examinations. Rejected applications receive especial attention.
Subscriptions to the "Inventor," an Illustrated Monthly publication, for the Mechanic and Artisan, the Engineer, Manufacturer, Agriculturist, Inventor and Patentee,
v6-19 tf ONE DOLLAR A YEAR.

Peach Trees! Peach Trees!!
20,000 fine Peach Trees of one year's growth;
50,000 Dormant

THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOLUME VII. SAN FRANCISCO, CALIFORNIA, FRIDAY MORNING, JANUARY 30, 1857. NUMBER 3.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.

By WARREN & CO.

PUBLISHED EVERY FRIDAY MORNING,
Simultaneously at Sacramento and San Francisco.

Offices—on Fourth street, between J and K, Sacramento.
—No. 130 Washington street (up stairs), San Francisco.

TERMS.—*Five* dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.

☞ Advertisements in this Journal will have a circulation and notice unequaled.

☞ **Advertisements and Subscriptions must be paid for in Advance.**

Agricultural Reviews and Essays---No. 1.

On the present state of the Netherlands.

PATENT Office Report on Agriculture, 1855. *Articles*—"Improvement of Land," and "Fertilizers."

"ACCOUNT of a Journey through the Netherlands, by William Chambers (of Chambers' Edinburgh Journal).

JOURNAL of Royal Agricultural Society of England, vol. 2. *Article*—"Flemish Husbandry."

"TOUR in Flanders," by the Rev. T. Radcliff.

WE have several advantages in the United States, which the people of many countries do not enjoy. Generally speaking, we do not require to traverse other lands, for the purpose of gaining information on the different modes of Agriculture as practiced abroad. All we have to do is to watch their systems, as followed on their first arrival by foreigners from different places, and adopting what is of advantage, let alone their peculiar crotchets, which, though to them time-honored and respectable, are behind our own go-ahead progress. In most cases we could not adopt a wiser policy. But, as says the proverb, "There is no rule so general as to be without exceptions," if we do not feel disposed to leave our own comfortable firesides, or if our business renders it impossible for us to do so, there is no kind of reading which is more likely to repay so well the time spent in its perusal, as descriptions by practical men of the state of Agriculture in different countries.

Though the inhabitants of our great country are pretty much disposed to visit other States than their own, but comparatively few have visited Europe. Consequently, very incorrect notions are entertained by many concerning its present state of advancement, not only in Agriculture, but in the arts generally.

I confess I was not a little surprised, the first time I visited Antwerp, to observe the care and attention, which the inhabitants of that venerable city pay to keeping their houses in complete repair. The city is itself a history in stone and lime. In one place, we have the fine old Norman Architecture, which the original Gaulish inhabitants had introduced in all its massive sublimity; in another, the light and elegant Moorish Gothic of their Spanish invaders. Here, the equally correct mansion according to modern Flemish taste; and there, the Cottage Orné of their French neighbors. And towering over all, the one Spire (where two was originally intended) of their world-renowned Cathedral.

But let us suppose that we have looked over the city, and seen its lions—that we have visited the Exchange and the Citadel, and have feasted our eyes by examining that chef d'œuvre of Rubens, the descent from the Cross—that we have been shown his monument, and the identical grating, made by Quentin Mastys without hammer or file, lying over the identical well where it was first placed. It is time we were away, for my readers are farmers, and do not wish to be taken into old cities to examine works of art, but to go into the country, where they may have an opportunity of seeing something which is of more practical interest to them.

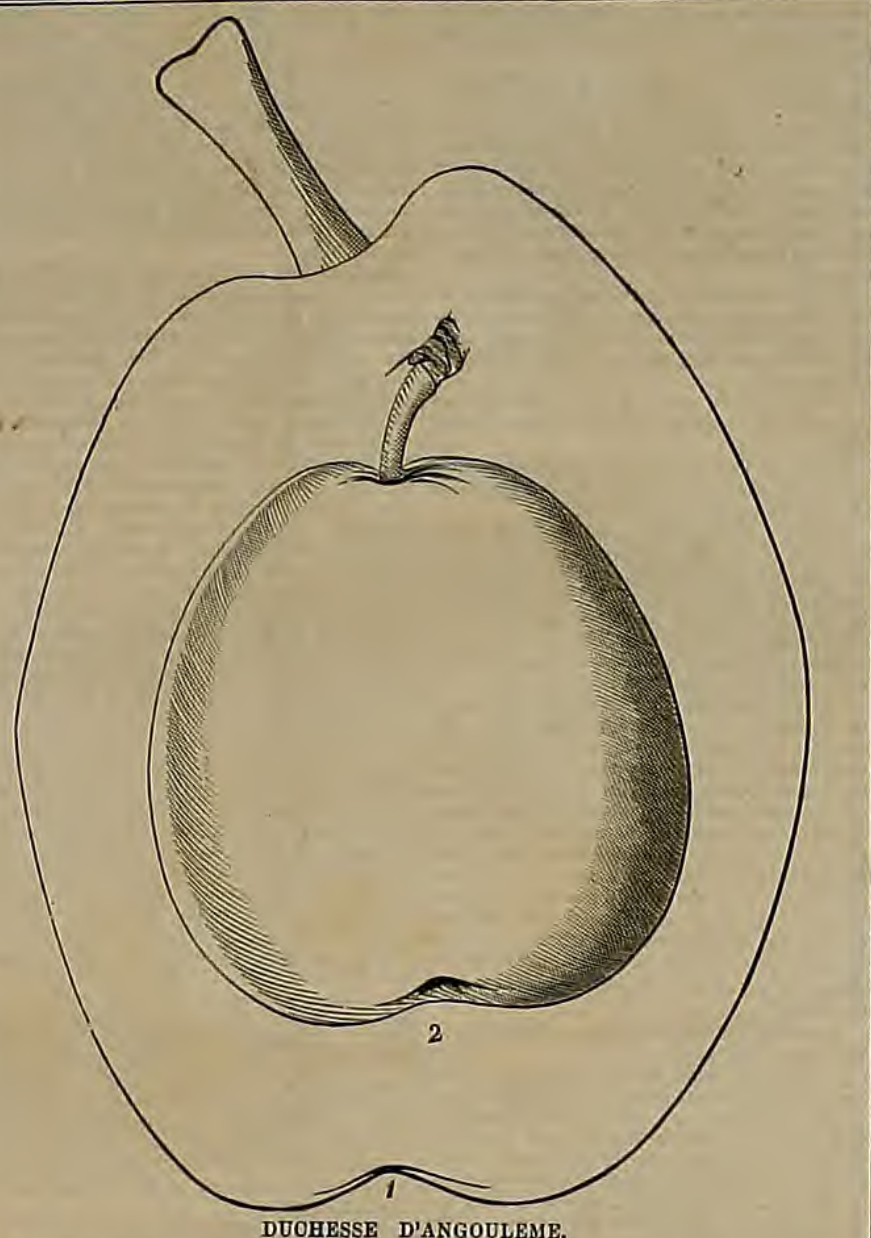
Well, let us suppose that we are seated in a second-class carriage on the railway. If it is in summer, the second-class carriage is preferable to the first, there being no comparison between them and those of the second class in England, which are in every respect inferior. Let us suppose that we have got out of the city—have crossed its double ditch—crossed the drawbridges—gone through the hole in the Wall—and had the gates expeditiously and courteously opened for our escape—and that we are in the country again. Heavens! what a country! Englishmen may talk, and Frenchmen jabber, but there is nothing like it under the whole canopy of Heaven! Only look at the railway, and the way in which it has been constructed; and do it leisurely, for you have plenty of time. The cars are moving as fast as the law allows, but that is only at the rate of eleven miles per hour! They are a steady people, those Belgians. They have finished their work. They have no occasion to hurry. Let us see how they have constructed the railway—the Great Brussels Railway, the finest in the whole country. Let Englishmen talk. When an act of Parliament has been obtained for making a new line of railroad in England, the shareholders have not only to purchase the land over which it passes, of sufficient width for the railroad, but in many places considerably more; in one place, to enable them to make a deep cut through a low hill; in another, for the purpose of getting the soil for filling up hollows. In the case of a cut through such a hill, the bank is allowed to remain in naked deformity; and where the soil has been taken for filling up hollows, unshapely pools may be seen which are a disgrace to the country. They manage these matters better in Belgium. Where such cuts have been made, the ground is there beautifully and gradually sloped, and the banks planted with flowering shrubs and evergreens. The hollows again, whence soil has been taken, are formed into ornamental lakes, and their borders adorned in a similar manner. And along their whole lines, the railroads are not only as neatly, and as substantially constructed as they are in England, but the station-houses are temples of architectural taste, rising amid knots of flowers, while those of England are only clumsy warehouses of brick and mortar. Nor is it the railway and its appurtenances alone, which call forth the admiration of the traveler. The whole country is a garden tastefully laid out; the houses in the neatest condition and kept in constant and complete repair; the land well cultivated; and the line-fences well trimmed; presenting altogether such a scene of rural comfort, and correct taste, as no other peasantry on earth are possessed of.

All this was the work of industry. "From the middle of Belgium," says the Patent Office Report on Improvement of Land, "a few miles north of Brussels, the country north-eastwardly becomes almost entirely a dead level. For the purpose of securing the permanence of their territorial possessions, the early occupants of this country had recourse to dikes or embankments, high and strong enough to protect them under ordinary circumstances from the tides; and placing windmills on these dikes, exposed to the sea-breeze, they worked the pumps which drained the inclosed lands. The Netherlands now present to our view an artificially constructed country, some portions of which are many feet below the level of the sea, and nearly all too low for natural drainage."

These facts are exemplified by the draining of Haarlem Lake, having a surface of upwards of 35,000 acres, which a few years ago was successfully executed by the industrious and enterprising inhabitants. The bringing such an undertaking, by a Patent Office Report, within the notice of the American public, reflects great honor on the Commissioner; and ought to be particularly interesting to the farmers of California on the present occasion, when the subject of the Tulé Lands is attracting general attention.

In the "polder" lands, husbandry is almost exclusively confined to the dairy, and to stall-feeding. It is in the north-eastern part of Flanders, where the soil is a good sandy loam, that Flemish Agriculture is most conspicuously displayed, and its superior claims to notice principally exemplified. There, they have adopted a half-farm, half-garden mode of cultivation, partly by the plow, and partly by the spade. "Without the spade," (I quote from the Journal of the Royal Agricultural Society,) "it would be impossible to give that finish to the land after it is sown, which is the chief cause of the more certain vegetation of the seed. In large farms in England, the spade is only used to dig out water-furrows; but in Flanders, where the land is usually laid off in stitches of about six or seven feet wide, the intervals are always dug out with the spade, and the earth spread evenly over the seed which has been harrowed in. If it is very light and poor, a good soaking with urine imparts sufficient fertility to it. If it is very stiff, the clods are broken as small as possible in the digging, as is done when stiff ground is trenched in gardens. The soil from the bottom of the trench contains few seeds of weeds, and the root-weeds are necessarily cleaned out in spreading. The trench which is thus dug is a foot wide, or more properly one-sixth part of the width of the stitch or bed, and the depth is from a foot to eighteen inches, according to the soil. Thus a layer of earth about two inches deep is thrown over the seed, which has been sown on a surface made smooth by their small harrows. These two inches of mold gradually incorporate with the soil below, and thus at every such operation the soil is deepened so much. The trenches are so arranged that every year a fresh portion of ground is dug out, and in six years the whole land is dug to the depth of at least one foot. In the next course the trench is dug a few inches deeper, which brings up a little of the subsoil, and after four or five such courses of trenching, the whole soil comes to be of a uniform quality to the depth of eighteen or twenty inches. In the Waes country they proceed differently, for they have a soil which by repeated trenchings has long been uniform in quality to the required depth. There they regularly trench one-sixth part of the land every year, and plant it with potatoes or sow carrots in it."

In England, and most other countries, the crops receive no manure after they have been sown.



DUCHESSE D'ANGOULEME.

The Flemish husbandman would look on such a system as indicative of inexcusable neglect. Their dung-hills are so situated that the whole drainage is collected in cisterns, with which is mixed the emptyings of privies, and pulverized rape and refuse linseed cake. This liquid, after remaining for a certain length of time to allow fermentation to commence, is conveyed to the field in barrels fixed on wheels, and spread at the rate of about 3,000 gallons per acre over the growing crop, by means of a scoop. The article on Fertilizers in the Patent Office Report will show any one, not only that a due attention to the health of Towns requires that a principal article in this compound ought to be better attended to for sanatory reasons, but that it is possessed of fertilizing qualities of a very high order. Ought not its successful application by Belgian husbandmen to induce market gardeners in the neighborhood of cities to bring it into more common use? For fields, it might be carted out and distributed in a liquid state, by being let into a transverse trough pierced with holes, in the manner used for watering streets; and for gardens, it might be evenly and readily distributed, by means of a common watering-pot, or garden engine.

When I first visited Belgium, I had other objects in view than to examine particularly the state of their agriculture. But my attention was uncontrollably arrested. I do not care for what purpose a man may visit that country, I believe it is impossible for any one not to be taken by surprise. Let us read of it as we may, it is infinitely superior to what we are likely to have conceived. The whole country is not only a garden, but a garden laid out with great taste, and kept in the most perfect condition.

"The two provinces of Holland," as says the Patent Office Report, "comprise 2,146 square miles, or 1,983,440 acres. The population of these provinces is 1,106,248. There is therefore one person to every acre and a quarter; and at this ratio, the area of Haarlem lake, rendered cultivable and habitable, is adapted to the maintenance and occupancy of 35,616 people. But when it is remembered that there is of course much waste and inferior land taken into the aggregate, and that this polder is all equal to the best land of the provinces, its capacity may be stated as equal to the support of 70,000 persons, or twice the number indicated by the general apportionment."

The fact that three or four acres of land in the Netherlands, by their superior mode of cultivation, are made to furnish a comfortable subsistence to a whole family, seems scarcely credible to those who have never visited those countries. But it is nevertheless true that such is the case in many instances, not only on the rich polder lands of Holland, but also on the fine alluvial sandy loams of Flanders. In the United States, where land of the best description can frequently be bought at the low price of $1,25 per acre, the minute garden system of those industrious husbandmen, as it has no occasion to be used, has no chance of being generally adopted. But in choice little spots near our cities, there is many a holder of a suburban lot, who would like to know how it is possible to raise a bare sufficiency on such a small portion of land. To such I would say, "You ought to get acquainted with Flemish Husbandry." After a while we shall have fruit in exuberant abundance; but to have, from a mere patch, all the common luxuries and conveniences, not only of the dairy and the poultry-yard, but also of the kitchen garden and the farm, is a consummation so devoutly to be wished, that I believe there are few in California who do not feel anxious to be better informed on the subject. Let them read the several treatises which I have pointed out as worthy of their study.

AGRICOLA.

Shall we Continue to Import?

A glance at the manifest of a single cargo of merchandise to this port, will show the enormous amount of articles which are continually imported, yet which could be manufactured here, and save the continued drain of gold which is steadily embarrassing and making the State poorer and poorer, so long as she sends *abroad* her wealth for that which she can produce or manufacture *at home*.

The ship Galatea, which arrived on the 28th, reports among the cargo, the following:

3285 boxes candles, 1197 boxes soap,
360 cases lard, 150 tierces cheese,
506 hhds. tierces and bbls. butter,
246 hhds. and tierces bacon and hams,
200 bbls, beef, etc., etc.,

and these are only the specified packages; more than half the cargo is entered *merchandise*, and it is fair to presume an equal amount is also in the cargo unspecified. Here we have *six thousand packages* of goods, that are manufactured here to some extent, and can be wholly, if proper attention and encouragement are given; this is but the roll of *one cargo*, and ships are arriving every day. Not only does it drain the wealth of the State for the goods, but a very large amount has to be sent away for the freight.

To those who are looking for "the better times coming," let them look to these matters and made their estimates, and they will see that this *leak* must be stopped, before those days come.

MR. THORNE'S SHORTHORNS.—Mr. Thorne's celebrated Shorthorn cow *Lallah Rookh*, was delivered of twins—a bull and a heifer calf, since the N. Y. State Fair. The celebrated cow, *Duchess*, which Mr. Thorne imported at an expense of $3000, has recently had a bull calf.

Duchesse d'Angouleme Pear.

THIS celebrated Pear which is figured in our paper this week, is one of the largest and finest winter Pears known. It requires a fine warm location, and a deep rich soil; it is often poor and insipid, when budded on pear stocks, if not in good locations; ripens about November in the eastern States, and often weighs a pound or more. It will do much better budded on the Quince, and we think will become one of the choicest Pears among us. We believe from the experience we have already of its qualities, having seen several, that we shall produce them here of enormous size, and of the most luscious quality; we learn they have been grown here, weighing from one and a half to two pounds.

The Early Days of Agriculture.

WE have been kindly favored with the perusal of a bound volume of the spirited little paper called "The Hombré," which was published by Dr. Wm. Rabé, in 1851, and of which *four numbers* appeared, and this is the *only volume* in existence—bound in red morrocco and gilt. There are many spicy and funny things in it, and the paper was only designed as an advertising sheet for the Doctor, who at that time had large quantities of goods on sale, among them plows, garden seeds, &c.; also a printing press and type; and he advertised that unless some one bought his press and type he should publish a paper; and this he did, as above described, to the extent of four numbers. The Doctor's motto was, "Help yourself and the Gods will help you."

In looking over this volume, we find *one article* which we wish to preserve as the gem of the book. It is a truth uttered for the cause of Agriculture, which though then lightly esteemed, has been more than fulfilled, as will appear by the reading. We copy as follows:

AGRICULTURE.

Among all the attempts which have been made to raise our new State into power and pride, the most sure path to wealth and virtue, comfort and power of mind—AGRICULTURE—has been neglected.

Whilst people have been deluded from their regular pursuits by reports of the acquisition of enormous quantities of gold in a short time, they have forgotten that there is a slow but a sure way to attain wealth and enjoy dignified prosperity by tilling the lands.

It has been our fortune to have traveled through the greater part of the two Atlantic continents, and here we have resided long enough to be nearly one of the oldest inhabitants, and, after ripe reflection and study, are prepared to say, that there is no country among civilized nations better adapted for farming and planting, than the rich and virgin soil of California. We have advantages here, which counter-balance any disadvantages which might be quoted. In this country the farmer need not examine the sky, when he goes to bed, with anxious eye, fearing that a drenching rain would ruin his harvest or crop. He may thrash his grain in the field, leave his straw without necessity of housing, and find a ready market for the abundant yield, which our rich soil will be sure to repay the husbandman. Flocks of sheep can, by ordinary care, be kept free from the diseases which so generally affect them in less congenial climes, and orchards once planted would soon pay for themselves a thousand times. We believe there is not a single cereal grain which will not flourish here.

These are the mighty resources which must finally be the basis even of California's greatness, and he who will produce any one year the heaviest crop, will be her greatest benefactor. Knowing this to be the fact, we shall so far deviate from the course laid out for our paper as to admit, occasionally, an article expressive of the feelings here laid down, and encouraging the developments of resources without which no state can flourish for any length of time.

We therefore invite contributions, under the same conditions expressed in our general editorial.

Hop Raising.

THERE is no country in the world that can more successfully grow Hops than California, or more perfectly ripen them. We have seen several vines grown as ornamental or for shade, and never have we seen vines so prolific; immense long clusters, thickly studded with large full size Hops—and we are informed by growers, that they exceed anything ever seen before. Large quantities are imported for the breweries, and we call the attention of cultivators to this article.

Messrs. Worthley & Co. of Clay street wharf, have sent us a case of sample roots, of wonderful length—they can be seen at the Rooms, on Fourth street, Sacramento. Many of the vines form roots in clusters of twenty, and of three, four and five feet long; they grow best in deep sandy loam, and the soil should be cultivated very deep. See Mr. W.'s card in another column.

NEW CULTIVATOR.—Mr. Robert Beeching, at No. 35 Pine street, San Francisco, has made a new style Cultivator, of durable materials; the frame work is of oak and very heavy, the teeth are shovel form, seven in number, and sink some twelve and fourteen inches, doing the work finely and thoroughly. We think it the best implement that is out, and hope all will go and see it.

National Bureau of Agriculture.

We believe we cannot better serve the cause of Agriculture, than by publishing, entire, the very able Report of the Committee on Agriculture made to the House of Representatives, at Washington, D. C. (Report 321, 1st session 34th Congress), by their Chairman, Hon. D. P. Holloway. This Report presents very important data, both as history and statistic, and is worthy an attentive perusal, and we trust the establishment of a National Board of Agriculture will give a new impetus to this great interest, and serve to place it where it by right belongs to the first and highest interest of our country:

REPORT:

The majority of the Committee on Agriculture, regarding the interests committed to their consideration of primary importance, beg leave to submit a bill to establish an economical department of the government, which shall be devoted to the promotion and encouragement of the great Agricultural interests of the country.

Agriculture is the *basis* of our national prosperity. It is the *substratum* of all other interests; and the degree of advancement which marks the progress of our country and its people in wealth, enterprise, education and substantial independence, is measured by the prosperity of its rural interests. It is one of those arts which, from the earliest periods, have been deservedly held in the highest estimation. One of the first injunctions upon our original progenitor, after his expulsion from the garden of Eden, was that he should "till the soil." The great necessity which, in the eye of Infinite Wisdom, made this command imperative from the first, has ever existed; and the experience of all the world, in all periods of its history, has fully demonstrated that the cultivation of the soil is of primary importance in securing prosperity, and hence should receive the first and most liberal patronage of the government. It furnishes the material upon which the manufacturer exerts his skill. It furnishes commerce with its business, and is intimately connected with the moral, social and political interests of the people. In our country, above all others, should this great interest be promoted.

Your committee, however, cannot ask that so important a change be made in the economy of our government, upon this subject, without calling your attention to the opinions and recommendations of those who have higher claims upon your confidence, and particularly one whose wisdom and political experience commands the admiration of the civilized world. General Washington, in his last annual message to Congress, and after seven years' devotion, as President, to the consideration of the best means to develop the resources of the country, declared:

"It will not be doubted that, with reference either to individual or national welfare, Agriculture is of *primary* importance. In proportion as nations advance in population and other circumstances of maturity, this truth becomes more apparent, and renders the cultivation of the soil more and more an object of public patronage. Institutions for promoting it grow up, supported by the public purse; and to what object can it be dedicated with greater propriety? Among the means which have been employed to this end none have been attended with greater success than the establishment of boards, composed of proper characters, charged with collecting and diffusing information, and, enabled by premiums and small pecuniary aids, to encourage and assist a spirit of discovery and improvement. This species of establishment contributes doubly to the increase of improvement, by stimulating to enterprise and experiment, and by drawing to a common center the results, everywhere, of individual skill and observation, and spreading them thence over the whole nation. Experience accordingly has shown that they are very cheap instruments of immense national benefits."

The same distinguished statesman, in writing to a friend, expresses the following sentiment:

"Your young military men, who want to reap the harvest of laurels, don't care how many seeds of war are sown; but, for the sake of humanity, it is devoutly to be wished that the manly employment of agriculture, and the humanizing benefits of commerce, should supersede the *waste of war* and the rage of conquest; that the sword might be turned to plough-shares and spears into pruning-hooks, and, as the Scripture expresses it, the nations learn war no more."

Judge Peters declares, that it was in contemplation by Washington to bring to the consideration of Congress *'his great plan* of ingrafting the subject of agriculture into a national system of education, and placing the cultivators of the soil, and their instruction and excitements to improvement in their art, under *national patronage*. He was anxiously solicitous in this patriotic endeavor. It was not imputable to him that it failed. Had he been fortunate enough to accomplish it, no action of his life would have deserved more celebrity and public gratitude."

Again, in a letter to Sir John Sinclair, General Washington says:

"I know of no pursuit in which more real and important services can be rendered to any country than by improving its agriculture, its breed of useful animals, and other branches of a husbandman's cares; nor can I conceive any plan more conducive to this end than the one you have introduced for bringing to view the actual state of them in all parts of the kingdom, by which good and bad habits are exhibited in a manner too plain to be misconstrued. * * * It will be some time, I fear, before an agricultural society, with congressional aid, will be established in this country. We must walk, as others have done before, before we can run. Small societies must prepare the way for greater; but, with the lights before us, I hope we shall not be so long in maturation as older nations have been. * * * From the first intimation you were pleased to give me of this institution, I conceived the most favorable ideas of its utility; and the more I have seen and reflected on the plan since, the more I am convinced of its importance, in a national point of view, not only to our own country, but to all others which are not too much attached to their old and bad habits to forsake them, and to new countries that are just beginning to form systems for the improvement of their husbandry."

On the 7th of December, 1795, General Washington called the attention of Congress to the subject of Agriculture, as we have quoted, and subsequently writing to a friend, he says:

"I am sorry to add, that nothing *final* in Congress has been decided respecting the institution of a National Board of Agriculture, recommended by me at the opening of the session. * * * I think it highly probable that *next* session will bring this matter to maturity."

Thus spoke the Father of his Country—the farmer President of this republic. And although he lived to see another session of Congress pass without anything being done with his favorite project, yet all must believe that had he lived our people would long since have been blessed with the advantages of a National Board of Agriculture, similar in its objects and purposes, if not in detail, with the one now proposed. We might extend our quotations from Washington's private correspondence upon this subject to the extent of a volume, but we deem the above sufficient to show his great devotion to the subject. We might also extend this report with quotations from the messages of Jefferson, Madison, Monroe, and Adams, but will forbear. We must, however, be indulged in giving the following extract from the first annual message of General Jackson.

"The agricultural interest of our country is so essentially connected with every other, and *so superior in importance to them all*, that it is scarcely necessary to invite to it your particular attention. It is principally as manufactures and commerce tend to increase the value of agricultural productions, and to extend their application to the wants and comforts of society, that *they* deserve the fostering care of the government."

Thus emphatically declaring agriculture to be of paramount importance, and that manufactures and commerce have but little claim upon the government, save and except as handmaids of agriculture.

President Polk called the attention of Congress to the subject, in his fourth annual message.

President Taylor, in his annual message, after most earnestly recommending the establishment of an agricultural bureau, says:

"To elevate the social condition of the agriculturist, to increase his prosperity, and to extend his means of usefulness to his country, by multiplying his sources of information, should be the study of every statesman, and a primary object with every legislator."

President Fillmore, in his message of 1850, made this recommendation:

"More than three-fourths of our population are engaged in the cultivation of the soil. The commercial, manufacturing and navigating interests are all, to a great extent, dependent upon agriculture. It is, therefore, *the most important of the nation*, and has a just claim to the fostering care and protection of the government, so far as they can be extended consistently with the provisions of the Constitution. As this cannot be done by the ordinary modes of legislation, I respectfully recommend the establishment of an agricultural bureau, to be charged with the duty of giving to this leading branch of American industry the encouragement it so well deserves."

President Fillmore, at the next session, again reverted to this subject:

"Agriculture may justly be regarded as the great interest of our people. Four-fifths of our active population are employed in the cultivation of the soil, and the expansion of our settlements over new territory is daily adding to the number of those engaged in that vocation. Justice and sound policy, therefore, alike require that the government should use all the means authorized by the constitution to promote the interests and welfare of that important class of our fellow citizens. And yet it is a singular fact that, whilst the manufacturing and commercial interests have engaged the attention of Congress during a large portion of every session, and our statutes abound in provisions for their protection and encouragement, little has yet been done directly for the advancement of agriculture. It is time that this reproach to our legislation should be removed; and I sincerely hope that the present Congress will not close their labors without adopting efficient means to supply the omissions of those who have preceded them. An agricultural bureau, charged with the duty of collecting and disseminating correct information as to the best modes of cultivation, and of the most effectual means of preserving and restoring the fertility of the soil, and of procuring and distributing seeds and plants, and other vegetable productions' with instructions in regard to the soil, climate, and treatment best adapted to their growth, could not fail to be, in the language of Washington, in his last annual message to Congress, a 'very cheap instrument of immense national benefit.'"

We might incorporate here the strong and earnest recommendations of several of the heads of departments in favor of decided legislative action upon the subject of agriculture; but we have shown conclusively that General Washington, and almost every successor in the presidential chair, in obedience to the duty imposed upon them by the constitution, to recommend from time to time to Congress such measures as they may deem calculated to promote the public welfare, have regarded the promotion of agriculture as one of the objects which would promote the public good, and add to our national prosperity. Our executive officers have, perhaps, done their duty; Congress has utterly failed in its obligations to the people. While the constitutional advisers of Congress have advised, and recommended action, to which Congress has turned a listless ear, the people—the *sovereign people*—are now demanding that this great interest shall receive the attention and patronage of government. For the last four years, petition after petition has been received from the people; agricultural societies in the counties, State boards of agriculture, the United States Agricultural Society, and State legislatures, have passed resolutions recommending the establishment of an agricultural department. No measure has heretofore been so earnestly and so generally recommended to Congress by those whose *duty* it is, and those whose *sovereign right* it is, to call the attention of Congress to measures of public importance. Will Congress longer disobey the injunctions of the one and the demands of the other? No matter how slight an appreciation or low an estimate members may place upon this proposition; it is their duty, under the letter and spirit of our democratic institutions, to take hold of the matter, and do now what they have so long neglected.

Let us for a few minutes look into the extent and importance of the agricultural interests of this country. By the census of 1850 it will be seen that the cash value of farms and agricultural machinery is put down at near three thousand five hundred millions of dollars. In our opinion this falls far below their actual value, and it may now be safely estimated at five thousand millions of dollars, and their annual product at two thousand millions of dollars. The agriculturists of the United States have more than double the amount of capital invested in the single and simple item of fences than there is invested in every department of manufacturing combined. Four-fifths of our people are engaged in rural pursuits, and by their labor are feeding and clothing over 27,000,000 of people. They produce 100,000,000 bushels of potatoes, 300,000,000 bushels of oats, 150,000,000 bushels of wheat, 800,000,000 bushels of corn, 1,600,000,000 pounds of cotton, 190,000,000 pounds of tobacco, and the less important vegetable in untold quantities. This presents a glorious picture of national prosperity. It inspires the heart of every American with pride; and too many say, It is doing well; let it alone. True, it has done well, but it can do much better. Every acre, speaking comparatively, can, under proper cultivation, be made to produce double the quantity it now does. The broad fields which have been opened in the west, have contributed much to the great aggregate we have presented. Their lands are still fertile, but under the present system of farming in too many instances the spoiler is working his way unmolested. Nothing but bringing within the means of every tiller of the soil a knowledge of the means to preserve the fertility of his lands can save them from failing, as have the lands in the older States.

By statistics collected and published by the Commissioner of Patents, we find that in the great State of New York, while the number of acres of land in cultivation has vastly increased, the agricultural product has decreased. It may seem strange, but figures are given with as much accuracy as is generally found, which do not profess to be positively accurate. By them, then, in New York, in 1845 there were 505,155 horses in that State, and in 1850 but 447,014, being a decrease of 58,141; the decrease in the number of cows for the same period was 63,066; of other cattle, 127,525; of swine, 566,092; of sheep, 2,990,624; and but a slight increase in the great staples of grain and other agricultural products. In speaking of Virginia, Professor Liebig says: "Harvests of wheat and tobacco were obtained for a century from one and the same field without the aid of manure; but now whole districts are converted into pasture-land, which, without manure, produces neither wheat nor tobacco. From every acre of this land there were removed, in the space of one hundred years, twelve hundred pounds of alkalies, in leaves, grain, and straw."

This same system of farming, which has extracted the original fertility of Virginia, has done its fatal work in the New England States. The soil in these States is now utterly incapable of producing wheat as a remunerative crop. In 1850, by the census report, the State of Connecticut produced but 41,762 bushels of wheat, while in 1840 it produced 87,000 bushels. Massachusetts but 31,211; in 1840, 157,923 bushels. And the whole State of Rhode Island, once famed for her fertility of soil, produced but 3098; in 1840, 26,409. The same state of facts exist in many parts of New York. In speaking of this vast depletion of the soil, it is declared, in an official report made to Congress, that "one thousand million of dollars would not more than restore to their original fertility the one hundred million acres of lands in the United States which have been already subjected to this exhausting and depleting process."

The cause of this great deterioration of the soil must be apparent to every reflecting mind. It is simply the continued extracting from the soil of those indispensable elements which enter into and constitute vegetable production—taking therefrom, and not returning anything thereto. It is conceded that this is not universal. The lights of science and intelligent observation have enabled many farmers to even improve the fertility of their soils; and if this knowledge were universal, such would be the result, with but few exceptions. The object of the bill herewith submitted is to place before the people a knowledge of the positive means by which this desirable result may be attained, and to explore still further the wilderness of ignorance which is believed to exist in agricultural science.

Will any one say that we have not the constitutional right to appropriate the funds of the common treasury for such an object? We trust none will raise such a question; but if any one does possess such scruples, we beg leave to refer him to the constitution itself, and to the action of Congress under it. The constitution declares that "Congress shall have power to * * * * provide for the *common defence and general welfare* of the United States." Congress must judge as to the means proposed to secure the "common defence"—whether by erecting fortifications, building vessels to constitute a navy, the creation and maintaining of military and naval schools, establishment of armories, or investigations of fire-arms and munitions of war. No one has doubted the power of Congress to do all these things. It has been done, and will be done so long as our government shall exist. The same discretion, as to what will promote the "*general welfare*" of the country, is confided to Congress. All must concede that the general welfare can in no way be better advanced or promoted, than by such means as shall secure the largest amount of wealth from its original source, the cultivation of the soil; than by inciting to habits of industry and economy, by securing intelligence, and promoting moral and political virtue among all classes of people, upon whom rests the maintenance and perpetuity of our free institutions. These are intimately connected with the prosperity of the agricultural population of our country. Everything which legitimately brings wealth to them, brings treasures to the whole people. Whilst rural economy flourishes, our country prospers; when it withers, our country will die. Every man who makes "two blades of grass to grow where one grew before," adds to the wealth of the country. Any discovery which shall enable the farmer to double the product of his crop, with the same or less labor than he now exerts, will add to the "general welfare." That this has been done in some instances will not be doubted; that it can be done in almost every instance, will be demonstrated under the investigations proposed in the accompanying bill. Congress has taken advantage of almost every proposition submitted to its consideration for the *common defence* of the country. Of this, it is not our purpose to complain; but conceive there is a just cause of complaint in its neglect of what we deem best calculated to promote the "general welfare of the United States."

Some, perhaps, may object to the passage of the proposed bill on account of its increasing the expenditures and multiplying the officers of government. The reply to this is, that so far as the agricultural interest is concerned, this ought to have been done long ago; in other words, let the expense be what it may, within the ability of the government, it should not be urged against a measure from the advantages of which the anticipated benefits are so great that they cannot be computed. Assuming the position declared to be true by Gen. Jackson, that "the agricultural interest of our country is essentially connected with every other, and *superior in importance to them all*," your committee deem it by no means improper to refer to the small amount which has been expended directly for its benefit in comparison with other interests of far less importance. Since the organization of the government there had not been expended directly for the benefit of agriculture, by the government, $200,000. For the benefit of the War Department a military school was established and has been maintained at an expense of more than $5,000,000. For the Navy Department a school has also been established and conducted at an expense of millions. An expedition was fitted out for the purpose of exploring the Dead Sea, at an expense of five times the amount which has been expended for promoting agriculture. Far more money has been expended in *ornamenting* and keeping up the twenty acres of grounds around the Capitol than has been devoted to fostering that great interest which is "superior in importance to all others." A larger sum has been expended in statuary to adorn the public buildings and grounds; more has been expended in the simple item of pictures; more has been expended in carpets to cover the floors of the public offices, than has been contributed to advance that great interest which President Polk said should be "the object of every statesman." We might refer to many other expenditures of a similar character, but let these suffice. Nor would your committee be understood as complaining of those above noticed. Their simple object is to suggest comparisons.

It may be said that agriculture having done so long, and succeeded so well, without the aid of government, it can continue to do so. True; in view of the disregard with which Congress has treated this great interest, the people in self-reliance have been compelled to exert themselves for the promotion of theirs and their country's prosperity. To this end, societies have been established in almost every part of the Union, demonstrating in every instance the greater good which could be done through a systematic and liberal effort on the part of the government, and such an one as your committee respectfully recommend. The effort on the part of the people has been constrained by the want of sufficient means—it has been too partial and limited. It has been without concert and co-operation. It has lacked a head, to which results could be reported, comparisons made, and correct conclusions drawn. It cannot be expected that private enterprise will ever be able to conduct any system of investigations which shall fully and successfully develop the great science of rural economy. Investigators and experimenters must be paid for their time and labor. The mechanic is protected in the inventions of his genius; but the experiments and results of investigations made by the farmer are common property. State boards of agriculture and State agricultural societies have been established, and in most instances have received in mere pittances, aid from their respective State governments. A national agricultural society has been organized by the enterprise of a few individuals; but it is not, as its name would imply, the object of government patronage. To sustain its exhibitions, a tax of from ten to twenty thousand dollars has to be assessed upon the liberality of the people of the cities where it is proposed to hold its annual fairs. These associations have been vastly beneficial to the people and the country, and are indispensable to future operations. They will prove valuable auxiliaries under a department. But the opinion seems to prevail to some extent, that nothing but bone and muscle are needed by the farmer, and thus he is left to grope his way in the dark, excepting such aid as he receives through the various periodicals and societies devoted to his interests. Of the patronage extended to other industrial pursuits the agricultural interest has not complained; but it now *demands* some share in the disbursements of a revenue towards which it contributes by far the largest portion.

To the inquiry, what good is anticipated from the creation of this department, we reply, all that good which has resulted to every other industrial pursuit towards which the energies of mankind have been directed under the stimulus of honor and reward. The establishment of a national observatory was once flouted at as a ridiculous and wasteful outlay of money; but who is there that will not admit that, under the charge of Lieutenant Maury, this institution has shed honor upon the country, as well as conferred substantial benefit to the commercial interests of the whole world? If, under the judicious administration of the proposed department, investigations should result in securing a prevention of the potato rot, or a discovery of the habits of such insects as prey upon the cotton, tobacco, or wheat crops, so as to secure these staples from destruction, the expense attending these investigations alone will be but as a drop in the bucket in comparison with the resulting benefits.

With these suggestions, we beg leave to submit a brief exposition of the provisions of the bill accompanying this report.

The first section provides for the appointment by the President, with the advice and consent of the Senate, of a Secretary, who shall hold his office by the same tenure as the Secretaries of the Executive departments, and receive as a salary five thousand dollars per annum. The object in not making a full Secretary, and a member of the Cabinet, is to avoid, as far as possible, political partisanship. If a member of the Cabinet, the Secretary would necessarily be a politician, and much of his time would be devoted to the investigation of political questions, in which his department could have but little interest. As it is designed to make this strictly an economical, practical, and scientific department, it is to be hoped, whatever may be the changes of party, that this department, like the Supreme Court, will remain undisturbed, so long as it is well administered.

The second section defines the duties of the Secretary to be, to collect agricultural statistics, pursue investigations for promoting agricultural and rural economy, procure and distribute seeds, cuttings, and bulbs, under such rules and regulations as he shall prescribe.

The third section provides for the appointment of a chief clerk, and four men of sufficient scientific and practical qualifications to prosecute such investigations in agricultural science and rural economy as he may direct, at a salary of two thousand dollars per annum. Also four clerks at one thousand five hundred dollars per annum, and four operators, at not more than three dollars per day when actually employed.

Section four provides for the appointment in each State of the Union of one corresponding agent, whose duty it shall be to collect such agricultural statistics, information in regard to the amount of land in cultivation, the extent and state of the respective crops, and such other statistics as said Secretary may direct, and under such rules as said Secretary may prescribe: and shall receive such compensation as the Secretary may deem proper, no one to receive more than five hundred dollars per annum. The object and utility of this section must be apparent to all. The farmers of this country have too long been dependent upon the commercial press of the country for their knowledge of the extent of the crops, and the effect to be produced by a failure or abundant production. Without being disposed to impugn the motives or denounce the conduct of the press, experience convinces us that operators and speculators in agricultural products have too frequently subsidized the press to advance their personal interests at the expense of the producer. By correct statement of the extent and probable product of the crops in each State—the number of cattle, hogs, sheep, horses, &c. &c.—all of which is easily and cheaply obtained through the officers of each State, and these statements published from month to month, the producer will be enabled to form a correct estimate as to the value of each, without being mystified by the statements and counter statements of interested parties or purchasers. This section provides for the appointment of corresponding agents in the different governments of the world with whom we have commercial relations by treaty, whose duties shall be similar to those of the agents in the States, and at like compensation. It is presumed the Secretary will select for these agents, whenever qualified, American consuls, and in the States the secretaries of the State Boards of Agriculture, where such are or may be established. With agents in the States and the different governments of the world, our producers will have all the advantages of information that speculators can have.

The fifth section provides for an official seal of the department, and the attestation of records, &c.

Section six provides for the taking oaths of office and the giving of bonds for the faithful discharge of the duties and safe disbursement of the funds.

Seventh section provides for a library of works upon the subject of agriculture.

Eighth section provides for the collection and exhibition of specimens of seeds, fruits, casts, insects, and other animals of interest to the farmer.

Ninth section requires a transfer by the Secretary of the Interior to the Secretary of Agriculture, of the books, papers, and all other articles now connected with his department.

Section ten provides for the publication of monthly reports through the public press, or otherwise, of the facts elicited through the corresponding agents.

Strawberries.

We copy from "Pardee on Strawbery Culture," a history of the three following kinds, as particularly worthy the attention of growers of this delicious fruit in California. We give also the analysis of the Strawberry, as worthy of note; for to make these plants thrive and fruit well, the proper qualities should be found in the soil—or rather this analysis shows what their food is, and if not present in the soil in sufficient quantity, it should be artificially supplied.

HOVEY'S SEEDLING.

This has been truly called a noble fruit, and is an honor to the originator, Mr. C. M. Hovey, of Boston. It has undoubtedly taken more prizes in the various Horticultural Exhibitions of our country, from Maine to Louisiana, than any other variety, and it retains the same position at the present time, although it is not equal in flavor to Burr's New Pine and others, or of the average size of McAvoy's Superior and some other varieties; and in almost every quarter, we hear more or less complaints of its fickleness in bearing, mingled with the strongest approvals of its productiveness.

Notwithstanding all murmurs, its flavor is good when well ripened; it is too often picked and tasted when first colored and unripe; and some of its berries so surpass all other varieties in size—often five and six and sometimes over *eight* inches in circumference—as to carry along the judges at our exhibitions; and the size under good cultivation always proves satisfactory.

We have, in times past, been embarrassed by its failure in bearing, but we are inclined to think it was in a great measure owing to our want of knowledge of its habits, and consequently erroneous cultivation. It requires a great deal of water, or moist soil, and will not bear so rich soil as the Boston Pine and many other kinds; and the simple reduction of the soil to the common grade has sometimes changed the barren into productive plants. It originated in 1834. The vines are vigorous, leaves large in rich soil, rather light green, and fruit stalks are of good length. Fruit is very large, roundish-oval, conical; color, rich scarlet; seeds slightly imbedded; firm flesh; well adapted for market, and of medium season; flowers pistillate.

LONGWORTH'S PROLIFIC.

This variety originated in Cincinnati at the same time with McAvoy's Superior. Mr. Longworth furnished the seed for both plants to two cultivators, McAvoy and Schnecke, the former of whom produced the Superior, and the latter this variety, which at first was called "Schnecke's Hermaphrodite," but afterwards named by the Cincinnati Horticultural Society, "Longworth's Prolific," in honor of Nicholas Longworth, Esq. It is a great favorite with the gentleman whose name it bears, who says "it will do what no other variety in this country or Europe has ever done—bear a full crop of good fruit standing alone." In a note to Mr. Barry in the fall of 1853, he says, "You will find the *Prolific* of more value than all the seedlings ever raised." Mr. Elliot, in his guide, says, "For market culture we regard it of more value than McAvoy's Superior;" and we have heard Dr. Warder bear the same high testimony to its excellence.

It has been almost impossible to get the genuine variety. In our attempts we have had repeated failures, until, at last, Mr. D. McAvoy politely took up for us two plants, while in bearing, and inclosed them in a letter. The plants lived, and we have been enabled to experiment with them intelligently. We have also seen the genuine in a few other gardens hundreds of miles apart during the last two seasons; and everywhere we have seen it, if it had a fair chance, it has done well. Many will doubtless, discard "Longworth's Prolific," who have only tried spurious kinds.

Our limited experience will not enable us to speak so decidedly as some of those we have quoted, yet we can say we are much pleased with it, and hope it will equal the high expectations excited; so far it seems to excel any hermaphrodite of our acquaintance in size and productive-

ness, and is of good flavor. The Pennsylvania Horticultural Society had it on exhibition from the garden of Caleb Cope, Esq., in 1853, and speak of it as "very large, roundish obvate, brilliant crimson; seed of the same color, sometimes yellowish, set in rather deep indentations, with rounded intervals; flesh red, flavor fine, quality 'very good,' a variety of great excellence, perfect in its sexual organization, and remarkably productive, a rare circumstance with staminate varieties of large size." The plant is very vigorous and hardy; large broad leaf, long foot-stalks, setting the fruit well up in large full trusses, productive and sure bearer; ripens at the medium season, and only loses its fine color when overripe. We have seen the fruit from four to five inches in circumference.

MCAVOY'S ETXRA RED.

This is another of the new Ohio strawberries, originated by Mr. Longworth in his garden, or by his tenant and gardener, Mr. D. McAvoy, at the same time with the Superior, which variety it appears in every respect to equal, except in flavor. The Fruit-Committee in Cincinnati report it as "large, beautiful and very prolific; quality medium, sub-acid not high-flavored." We think it will prove a valuable market fruit: it is very vigorous and hardy; fruit large and handsome, and keeps well. We have seen it exhibited for forty-eight hours, after twenty miles land carriage, when it remained the brightest and most showy fruit of forty choice varieties. The Pennsylvania Horticultural Society in 1853 pronounced it "extraordinarily productive," and quality "good." It is pistillate, and its only faults, as far as we are aware, are its acidity and its lack of high flavor, which we do not consider indispensable for a market fruit.

The following *analysis* of the strawberry plant (vines) was made by Mr. Bilius, Kirtland, Ohio.

In 116 grains of the ashes of the Garden Strawberry he found:

Potash	33.154
Lime	26.519
Carbonic Acid	23.008
Magnesia	8.908
Phosphoric Acid	6.970
Silica	6.117
Charcoal and sand	3.103
Soda	2.794
Perphosphate of Iron	1.513
Sulphuric Acid	1.469
Chlorine	.718
Organic Matter and loss	1.739
	116.000

In the Annual Report of the Progress of Chemistry and allied Sciences for 1847 and 1848, we find the following analysis of the Strawberry by Thomas Richardson:

THE PLANT.

Potash	38.65
Lime	12.20
Silica	2.58
Perphosphate of Iron	8.65
Magnesia	5.85
Phosphoric Acid	15.58
Chlorine	1.23
Soda	9.27
Organic Matter, Loss, &c	5.99
	100.00

39 per cent. of ash.

THE FRUIT.

Potash	21.07
Lime	14.90
Soda	27.01
Silica	12.05
Perphosphate Iron	11.15
Phosphoric Acid	8.59
Sulphuric Acid	3.15
Chlorine	2.78
Magnesia	Trace
	100.00

41 per cent. of Ash.

The great variation in these analyses is probably mainly owing to the greater age of the vines in one case than the other: perhaps something is also due to soil and climate.—ED

Silesian Merinos.

These are of a more recent importation, and are less known to the public than any of the other three varieties. The first importation of this kind reached New York in May, 1851, and was personally selected by the writer, with whom was associated as a partner, William Chamberlain, of New York. Like the other Merinos, originally from Spain, they were exported from thence into Germany, in 1811, since which time they have been in the care of a most skillful breeder, who is also a gentleman of high scientific attainments, but ardently devoted to the improvement of his flocks. Unlike most of the German breeders, he has avoided the error of sacrificing all other considerations to the quality of the staple. The sheep of the German States generally are of the Saxon variety of the Merino, and would not meet with countenance from the wool growers of New England.

The flock in question was bred purely from the Infantado Negreti family, of which fact the gentleman was able to furnish us with undoubted evidence; and it is confidently believed that another pure bred Negreti flock does not exist. They presented to the observer that uniformity of appearance and sameness which is a *prima facie* evidence of purity of blood and skill in breeding. After satisfactory examination, I am confident in the conclusion that selections from this stock would supply an existing want, and prove acceptable to a large class of wool growers in our own country. Subsequent events have justified the correctness of the conclusion, and additional shipments have been necessary to supply the demand.

The ewes of this variety are nearly faultless in shape; the rams are less perfect in this respect previous to maturity. They are thickly covered with a compact and exceeding fine growth of wool, holding its evenness and thickness over the entire pelt in a remarkable degree; are of a medium size, the ewes weighing at maturity from 80 to 100 pounds, and the rams from 100 to 150 pounds. The weight of fleece is about the same as the best Spanish flocks, but the length of staple is not quite so long, but more compact. The natural oil is sufficiently abundant to give them the desirable dark surface, but, unlike some of the Spanish, it is wholly removed by washing in cold water. The offspring resulting from the union of these rams with the common Spanish ewes have proved more satisfactory to those who have made the cross, the quantity of wool having been considerably increased, and the quality much improved from the original stock.

In concluding this description, the facts will warrant me in saying that, as to purity of blood, they stand pre-eminent. The other two varieties, although of Merino blood, are yet the offspring resulting from a union of the sub-varieties before referred to. For the profitable production of the finest grade of wool, the Silesians are unequaled. But, it may be asked, which of these varieties, all things considered, are the best adapted to the mass of wool growers? The question does not admit of a direct answer. The individual circumstances of each farmer must be taken into the account, and his location, conveniences for keeping a large or small number, and the nature of his pastures must have their due weight in deciding the question.—[Geo. Campbell, in Patent Office Report.

THE WORLD'S VERDICT.—In all delicate cases where blame is due, you will generally find the following law acted upon: "The poor man is accused; the rich man excused."

Reasons for Bad Luck.

I HEARD a farmer say, that when it rained porridge, his dish was always bottom upwards; as much as to accuse himself of negligence. Keeping the dish right side up, ready to receive good luck, is of so much importance to the farmer, that if neglected, he will have no occasion to look for success.

Bad luck often follows the farmer that spends his time in the spring at the store, or in fishing and hunting to a late hour. With all his efforts, his business drags; his dish is bottom up, and he is often seen fretting and driving to get seed into the ground in the right season to have his crops destroyed by the drought, or an early frost.

There are other causes of bad luck among farmers. Running in debt for more land than can be cultivated to advantage; buying unnecessary articles and doing without those which are necessary; want of economy; neglecting the payment of small accounts till they accumulate in such a manner as to afford him a *run* of business independent of his farming operations; keeping unnecessary animals to devour his produce. One dog will, if fed to the full, cost as much us two children, and he is of very little service to the farmer, unless he considers having his cattle and other animals frightened and bitten and his neighbors' sheep devoured as belonging to necessary farm operations. More horses than can be used to advantage indicates bad economy. Horses require more and better fodder than any of our domestic animals, and if they are not profitably employed their owners will be running into bad luck before they are aware of it. The carcasses of horses are of but little value for food, and all the service they render us is their labor.

Extravagance causes its share of bad luck. Extravagant desires to get rich, cause many individuals to over do in business operations, become involved, and fail. All kinds of prudence and economy give way, in this swift-trotting age, to the go-ahead principle, heedless of consequences. I believe if Dr. Franklin should come on to the stage of action again, and inculcate his maxims of wisdom and economy, that he would be considered by men who go into chancery once in two or three years to replenish their funds, as a stingy old fogy.

The farmer who has any reason to expect good luck, must see that his fences are well repaired early in the spring, that his cattle may be restricted within the limits assigned to them, lest they become ambitious and commence a fillibustering expedition to acquire more territory and to reap new laurels, or something more agreeable to taste. If his dish is right side up, he will plant and sow his variety of seeds in their proper seasons, and keep his fields and garden clean from weeds, or else at the end of harvest he will exclaim, "I have nothing but bad luck: when it rains porridge my dish is always bottom up." Indolence, extravagance, poverty and bad luck all belong to the same family, and a more discordant set of relatives never cohabited under the same roof. It would be advisable for the farmer, as well as others, to form no acquaintance with the two former characters—that they fall not into the clutches of the two latter. To avoid bad luck, be prompt, let everything be done in good season, keep interest money and small debts paid up; see that one of the best means of instruction, the *newspaper*, is remembered, among the rest, and bad luck will seldom visit your establishment.—[S. Brown, in Boston Cultivator.

EFFECT OF CHARCOAL ON FLOWERS.—The following extract cannot fail to be interesting to the botanist and the chemist, as well as to every lady who has a rose-bush in her garden, or a flower-pot in her parlor. It is from the Paris Horticultural Review. The experiments described were made by Robert Berauds, who says: "About a year ago I made a bargain for a rose-bush of magnificent growth, and full buds. I waited for them to blow, and expected roses worthy of such a noble plant, and of the praises bestowed upon it by the vendor. At length, when it bloomed, all my hopes were blasted. The flowers were of a faded color, and I discovered that I had only a middling multiflora, stale-colored enough. I therefore resolved to sacrifice it to some experiments which I had in view. My attention had been captivated with the effect of charcoal, as stated in some English publications. I then covered the earth in the pot in which my rose-bush was, about half an inch deep with pulverized charcoal. Some days after, I was astonished to see the rose, which bloomed of as fine a lively rose-color as I could wish. I determined to repeat the experiment; and, therefore, when the rose-bush had done flowering, I took off all the charcoal and put fresh earth about the roots. You may conceive that I waited for the next spring impatiently, to see the result of this experiment. When it bloomed, the roses were, as at first, pale and discolored; but by applying the charcoal as before, the roses soon resumed their rosy red color. I tried the powdered charcoal likewise in large quantities upon my petunias, and found that both the white and the violet flowers were equally sensible to its action. It always gave great vigor to the red and violet colors of the flowers, and the white petunias became veined with red or violet tints; the violets became covered with irregular spots of a blueish or almost black tint. Many persons who admired them thought they were new varieties from the seed. Yellow flowers are (as I have proved) insensible to the influence of the charcoal."

WHAT MAKES A BUSHEL.—The following table of the number of pounds of various articles articles to a bushel may be of interest to our readers:

Wheat	60 lbs.	Onions	57 lbs.
Corn, shelled	57 "	Beans	60 "
Corn, on cob	70 "	Bran	20 "
Oats	36 "	Cloverseed	60 "
Rye	56 "	Timothy seed	45 "
Barley	46 "	Flax seed	45 "
Buckwheat	52 "	Hemp seed	45 "
Potatoes	60 "	Bluegrass seed	14 "
" sweet	50 "	Dried peaches	33 "

SOAP.—The wife of an American agriculturist has been experimenting in soaps, and finds that the addition of three-quarters of a pound of borax to a pound of soap melted without boiling makes a saving of one-half in the cost of soap, and of three-fourths of the labor of washing, improves the whiteness of the fabrics, besides the usual caustic effect is thus removed, and the hands are left with a peculiar soft and silky feeling, leaving nothing more to be desired by the most ambitious washerwoman.

REMEMBER that every person however low, has rights and feelings. In all contentions let peace be rather your object than triumph. Value triumph only as the means of peace, says Sid, Smith.

Is there no way, writes Thomas Fuller, to bring home a wandering sheep but by worrying him to death.

FLIGHT OF THOUGHT.

INSCRIBED TO REV. J. D. STRONG.

How swift thought flies! Go, mark the lightning's track—
Trace blazing comets to Aphelion back—
The flying fragments a volcano gave—
The leaping torrent or the lashing wave—
The sweeping tornad or the thunder's dash—
The whirlwind's fury or the cannon's flash—
Death's blasing weapon or the rush of time,
That is, and was, e'or sight could feel it seen.
From world to world, its rapid wing speeds light,
Creation kindles at its lustrous flight;
Night shrinks diminished as it fleeting flies
And rends the shadows from the bright'ning skies,
But swifter thought—it bursts the chains of clay,
Explores the infinite, and soars away
To shapeless chaos on confines of space.
Where sun hath never shone, it tries to trace
The extremest verge of all created things.
Through ages past, a trackless pathway wings,
Then flits to future; dares the awful glance
Of all that fills eternity's expanse.
Ascending, turns its heaven-circling flight,
A blazing meteor from the womb of night,
Mounts to the throne of God and looks unblenched,
Its wing unwearied, and its life unquenched;
And light and time pause on their path aghast,
While thought is fleeting in its passage past.
One moment scarce has sped from mortal view,
Till thought returns and could its race renew.

JOE H.

HONOLULU, 1856 (P. C. Advertiser.

Be Modest.

They that do much themselves deny,
Receive more blessings from the sky.

THERE is a call upon mankind to value and esteem those who set a moderate price upon their own merit; and self-denial is frequently attended with unexpected blessings, which in the end abundantly recompense such losses as the modest seem to suffer in the ordinary occurrences of life. Then the curious tell us, a determination in our favor or to our disadvantage is made upon our first appearance, even before they know anything of our real character, but from the intimations men gather from our respect.

A man, they say, wears the picture of his mind in his countenance; and one man's eyes are spectacles to his, who looks at him to read his heart. But though that way of raising an opinion of those we behold in public is very fallacious, certain it is that those, who by their words and actions take as much upon themselves, as they can but barely demand in the strict scrutiny of their deserts, will find their account less every day.

A modest man preserves his character, as a frugal man does his fortune; if either of them live to the hight of either, one will find losses, the other errors which he has not stock by him to make up. It were therefore a just rule, to keep your desire, your words, and actions, within the regard you observe your friends have for you, and never, if it were in a man's power, to take as much as he possibly might, either in preferment or reputation.

In the tragedy of Macbeth, we are wonderfully taken with the skill of the poet, in making the murderer take fear to himself from the moderation of the prince whose life he was going to take away. He says of the king: "He bore his faculties so meekly;" and justly inferred from thence, that all divine and human power would join to avenge his death, who had made such an abstinent use of dominition.

All that is in a man's power to do to advance his own pomp and glory, and which he forbears, is so much laid up against the day of distress; and pity will always be his portion in adversity, who acted with gentleness in prosperity.

SINGULAR DEATH.—The New York Herald relates the following circumstances attending the death of a highly respected physician:

Dr. James H. Bogardus, of Kingston, Ulster county, N. Y., died at the Girard House on Sunday, after a very short illness, under singular circumstances. The deceased was about forty-three years old, of the highest respectability, and ranked the first in his profession in the county in which he resided. For about two years he has been engaged to Miss Isabella Hamilton, a young lady, also a resident of Kingston, and on two occasions days were fixed for their nuptials, on each of which death presented a barrier to the consummation of their wishes. On the former instance, the death of his brother's child rendered a postponement of the day of their contemplated marriage necessary, and both the doctor and his affianced bride attented the funeral. On the second occasion fixed for their union, Miss Hamilton's sister lost a child, and again they both attended a funeral service instead of their own marriage ceremony.

On Monday Dr. Bogardus came to the city and put up at the Girard House, in Chambers street, and, on retiring, complained to Dr. Davis, with whom he was well acquainted, that he was quite unwell. The following day, not feeling able to leave his bed, Dr. Sayre and other eminent physicians were called in and consulted. After several days' attendance, they came to the conclusion that there was something more than disease of the body in the case of their patient, and they intimated to him the fact, whereupon Dr. Bogardus frankly informed his medical advisers that he was deeply attached to a young lady, to whom he was to be married on Tuesday, that their marriage had been twice frustrated by death, and he now feared that his own illness would prove a third interposition to his happiness.

Dr. Sayre, perceiving the sad effect which the fear of another disappointment had upon his mind, suggested the propriety of sending a telegraphic dispatch to Miss Hamilton to come to New York without delay, for the purpose of carrying out the wishes of Dr. Bogardus. The dispatch was accordingly sent, and Miss Hamilton arrived about four o'clock on Sunday morning, and as early as possible some of their friends, residing in Newark, were sent for to attend the marriage ceremony. At one o'clock the same day Dr. Sayre visited his patient, and found him so much better that he considered that it would be unnecessary for him to attend again. At half past two o'clock the parties were united, and Dr. Bogardus expressed his thankfulness in being enabled to carry out his intentions of marriage to the lady in question. The friends then retired for a few moments for the purpose of partaking of some refreshments. He then remarked that he felt so much better that he would get up, and at once proceeded to raise himself in bed. His bride perceiving his efforts to rise, went to assist him, only to discover that he was expiring in her arms. She instantly sprang to the bell and rang for assistance; but before the friends could reach the room he was a corpse.

WHAT maintains one vice would bring up two children.

The eye of the master will do more work than both his hands.

Commercial Nursery,

Three-Quarters of a Mile East of the City of San Jose.

THE Proprietors of this Nursery, having received the award of the

FIRST PREMIUM
OF THE
STATE SOCIETY

the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of

FRUIT AND ORNAMENTAL TREES,
For the Trade of 1856 and 1857,

that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.

Our Stock consists of

One Hundred Thousand Trees,

FROM FOUR TO ELEVEN FEET IN HIGHT.

Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;

TOGETHER WITH

Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.

v6-13 3m SMITH & WINCHELL.

Briggs' Nursery,

Three Miles from Marysville, on Great Road.

THE Proprietor of this extensive Nursery would invite those who intend to establish Orchards the coming Autumn to the following stock of Trees, which will be ready for sale:

70,000 Extra Peach Trees, from 3 to 6 feet;
100,000 Dormant Buds;
6,000 Full size Plum, of best kinds;
10,000 Dormant Buds;
5,000 Cherry Trees, good size—best sorts
15,000 Pear, of the rarest kind only;
5,000 Apple Trees, ready for orchard;
500 Quince, of very choice kinds;
10,000 Nectarine Trees, of extra size;
10,000 Apricot " "

The above are grown under the eye of the undersigned, and the kind of fruit he has exhibited the present year is the best guarantee that they are indeed fruit trees that will bear.

The proprietor of this Nursery will receive from the East this Autumn an invoice of some

Fifty Thousand Trees.

These will be of extra sorts, and such as the proprietor will guarantee to his patrons.

The proprietor being desirous of encouraging others to plant Orchards of fine Fruit Trees, will offer the following inducements:

Peach Trees, No. 1, named first		$1 50	each.
" "	Dormant buds	50	"
Plum "	full size	2 50	"
" "	Dormant buds	1 25	"
Cherry "	full size	2 50	"
Pear "	" "	1 50	"
Apple "	" "	1 87	"
Quince "	" "	1 50	"
Nectarines		1 50	"
Apricots		1 50	"

All the above trees will be warranted true, as the proprietor is more desirous to have his customers succeed and do well, than merely to sell his trees.

☞ Purchasers of over $1000 will receive a discount of twenty per cent.

The California Farmer.

SAN FRANCISCO, FRIDAY, JANUARY 30, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

OUR PUBLICATION OFFICES.

In order to facilitate and advance the interests of our paper, and to promote the cause we plead, we shall issue our paper hereafter at San Francisco and Sacramento, simultaneously, having offices in both places. Our Office in Sacramento as heretofore, and our Office in San Francisco, No. 130 Washington street, near Sansome.

Letters for the Farmer.—Our correspondents can now address us either at San Francisco or Sacramento, as shall be most convenient for them. Letters, &c., addressed to us at either place will be promptly attended to. Our exchanges will please forward their favors to us at San Francisco, and publishers who are in correspondence with us will hereafter please forward their works for review to San Francisco.

Life Assurance.

One of the most important of all the duties which a parent owes to his family, is so to labor as to secure to his family a competence in case of his sudden removal by death, or of any personal misfortune that should arrest his usefulness. In the case of sudden death and in the midst of business, a wealthy man by being suddenly removed, is often made bankrupt—his own presence is wanting to give value to his property, and being exposed to immediate sale the losses consequent upon sudden death and a forced sale, often change the value of property, so that what would have been a fortune, is found to be insufficient to pay the debts of the estate and charges, and the family is left destitute; and in California it has been a most lamentable fact that many large estates, by the long and slow processes of law, have been wholly absorbed, and wifes and children have been left homeless, penniless and friendless—for to be *poor* in California is synonymous to being friendless.

To a husband and father there is one way to provide against so terrible a misfortune as leaving his family friendless, it is by securing to them, while living, a certain home beyond the contingencies of such events as loss of property, and this is by *life assurance*. This can be done by setting apart a moderate sum yearly, for a life policy, payable to the wife or children in case of sudden death; the money thus paid is a good investment while living, and often pays a good interest, and if necessity occurs, a life policy will bring money, or can be used as collateral security in business transactions where the prospect of success depends on the life of the person engaged in the transactions. We have had many instances brought to our knowledge of persons who thus wisely provided for their families, and saved them, by such acts, from the cold charity of the world.

It is also highly important that in securing a Policy of a Life, the investment should be in a safe institution, and we are glad we can point to such an one that now appears in our advertising columns. The Northern Assurance Company of London is beyond question one of the best in Europe, with ample capital, and their Agency here, Messrs. Smith Brothers, are so well known as to need no word from us; to this institution, and to the most excellent plan of Life Assurance, we recommend every farmer, mechanic or merchant who wishes to provide for his family against any and all contingencies, even of death. We can speak from experience, and although to one in health, it may not appear important, yet it is so; eight years since we felt it important, when we came to California, and we have never regretted it. We recommend all to reflect upon it, and go to Messrs. Smith Brothers, and consult them upon this matter, and we believe they will adopt our suggestions.

More Blood Stock.

It is always a pleasure for us to make a record of *advance* in any branch of Agriculture, and the introduction of new breeds of Stock we feel to be of the highest importance to agricultural development. We learn from George H. Howard, Esq., that he has now on the way hither some of the finest Blood Stock that could be procured in the States, principally dairy stock, and intended for the beautiful ranch of his late lamented brother at San Matéo.

Every importation of this character is a public benefit, and should excite a lively interest in our citizens.

The Mountaineer.—In coming down river on our last trip, we met our friend and brother Lovejoy, editor of the Mountaineer, and learned from him that he had been conning over some of his editorials on his way down, and on something of a peculiar route too, having footed it *forty-four miles* over snowdrifts varying from six feet to thirty feet; that he and several companions had actually passed over peaks and gulches of snow of astonishing character. We also learned that in 1852 there were drifts of snow measuring forty and fifty feet; and yet, says our friend, I feel your cold and chilly winds more than I do the breezes from the snows round "Pilot Hill." We shall look for sketches in the Mountaineer, the result of this tour, sparkling as the crystal snow drops over which our editorial brother has wandered.

A National Bureau of Agriculture. This Report of the Committee of Agriculture in the Congress of the United States, we hope will be read by all legislators, and we believe the members of our State Legislature will find in it much that is valuable as aid and authority, for the legislative aid which California demands at the hands of her law givers.

Mechanics Association of San Francisco.

The Great Mechanics' Fair, to take place in August next, is exciting a very laudable interest—by request, we publish again the remarks we made at the time of the State Fair, and hope it will arouse a due interest in their cause:

It has been a source of great satisfaction to us to note the new and earnest interest manifested by the Directors of the San Francisco Mechanics' Association, to arouse the Mechanics and Workingmen of the State to their true interests.

Who does not believe and know that the future prosperity of California depends upon the action of her Workingmen—her Mechanics, Farmers, and Manufacturers. It is their labor that establishes and builds up. They give life to trade. The prosperity of this class builds up our merchants and ship-owners. The prosperity of the working classes enhances the value of real estate, and to the Workingmen of California all eyes are now turned with hope for a true and durable reform in those portions of our government, State, city and district, as most need it.

The Mechanics' Institute of San Francisco, we believe, is the only incorporated institution of the kind in the State, and it is worthy of the fostering care of our *Merchants and wealthy men*; they should aid and encourage it. And every Mechanic, in that county especially, should enroll his name as a member, take an active part in its labors, and enjoy its privileges.

The Hall of the Mechanics' Institute of San Francisco, we feel confident is one of the most spacious, most neatly furnished and best supplied with papers and the best library, in that county. Many hundred volumes of valuable works, and about sixty papers, with every comfort and convenience that could be required, make these rooms worthy the attention of every Mechanic in our State.

We feel called upon as the friend of the mechanic and working-man to call their special attention to this noble Institution, as worthy their highest consideration. It has been our pleasure to meet with the gentlemen who compose the Board of Directors, often, while urging their kind attention to a union of their interests with those of the cause of Agriculture, and we now feel a great pleasure in announcing a happy result of these efforts.

It will be seen by the call in another place, that this Institute has come forward promptly, and they do by their call invite all their co-laborers over the State to unite with them and join them in the approaching State Fair. What a glorious exhibition could be made of Manufactures and of the Mechanic Arts. How much beauty could be revealed by the specimens that now grace the galleries of our Artists, and if all would but unite, how great an impetus would be given to our prosperity; and we ask in all earnestness—*Will not every one do something?*

It has afforded us much pleasure to see this work progress, and we hope to see it triumph.

For the honor done us by this Institute in adopting our journal, we feel most grateful, and will endeavor to merit it. We are the friend of the Mechanic and Workingman, and we have pledged our most earnest efforts in their cause, for it is twin with the cause of the Farmer—our own long cherished science.

We shall be grateful to receive the co-operation and support of the Mechanics and Manufacturers to our journal, and to receive from them such information touching their interests the publication of which will advance the general welfare.

We appeal to all the *Workingmen* of the State. The California Farmer is the Workingman's journal, and as such open to all subjects of general interest. We do hope they will be pleased to add their names to our list. Such as desire specimen copies will receive them by making known their wishes. Give our journal but that appreciation and support it deserves, and we are content.

We herewith annex a complimentary letter, received at the same time we published the Card of the Institution, and which we re-publish now, that Mechanics all over the State may know that our journal is open to their interests; and with this we again present the Card of this excellent Institution, calling attention to the great coming Fair, to which we invite an earnest interest.

It was by unanimous vote decided to have the inclosed Circular distributed through the agency of the California Farmer, which we are pleased to recognize as the Organ of our Institute, and the journal of the industrial interests of the State. We further desire to call the attention of all mechanics and manufacturers especially to the California Farmer as a journal particularly earnest in the cause of the workingmen of California, and a journal worthy their interest and support.

The California Farmer having long been engaged in the cause of fostering and encouraging the industrial interests of our State, and having voluntarily offered to aid our interests by opening its columns for the publication of all our meetings and reports, and otherwise aiding our interest without cost to us or any pecuniary reward for so doing, we feel called upon to recommend it to our co-laborers as the journal of our interests, and to adopt it as the organ of our Association, and do thereby cheerfully recommend it to the mechanics, manufacturers and workingmen of our State.

Accompanying this you will receive the Circular alluded to, and which, we trust, will be acceptable to you to publish, and be received and acted upon promptly over our whole State.

Gardner Elliott, President.
P. B. Dexter, Rec. Secretary.
H. F. Williams, Cor. Secretary.
E. Cook, Treasurer.

Directors.
J. E. Kincaid,
J. A. Banes,
Wm. McKibben,
G. D. Street,
E. P. Swett,
C. L. Taylor,
D. Van Pelt,

The annexed call is for the present year, and we trust every mechanic and manufacturer in the land will give it their best influence, and that every press will herald the news:

Hall of the Mechanics' Institute
Of the City of San Francisco,
Dec. 22, 1856.

Editors Farmer: Gentlemen—Inclosed you will find a "Circular" emanating from our Institute, which you will insert in your columns, with such comments as you may think the enterprise deserves.

Very respectfully, yours,
H. F. Williams, Cor. Secretary.

CIRCULAR.

The Mechanics' Institute of the City of San Francisco have resolved to hold an Industrial Fair in said city, in the month of August, 1857; and they cordially invite the mechanic, manufacturer, miner, artist, agriculturist, horticulturist, and every other producer, to be represented.

No pains will be spared, on behalf of the Institute, to render this the most brilliant and interesting exhibition ever witnessed on the Pacific coast; and the hearty co-operation of all well-wishers of the enterprise is most earnestly solicited.

Special premiums and diplomas will be awarded for articles of superior merit.

As soon as some definite plan for the exhibition shall have been matured, the public will be advised of the same.

By order of the Institute:
H. F. Williams, Cor. Secretary.

Chinese Sugar Cane—Sorgho Sucre.

As everything relating to this new and interesting plant is of importance, we give the following from the Commercial Advertiser, published at Honolula, and shall try to keep our readers posted in relation to the subject. We also give an item in relation to the cotton raised at the Islands. It will be remembered also that the samples of cotton raised in California in 1855, and sent to New Orleans and examined by the Board of Cotton Brokers, was then pronounced superior to any cotton yet shown. That sample was grown at the ranch of Maj. P. B. Reading, Cottonwood:

Mr. Editor: In the Advertiser of Sept. 8th, there appeared a notice of the "Sorghum Sacharinum" and its innumerable good qualities. I herewith send you a quantity of what I supposed to be the article to dispose of to those who would like to try it.

The seed of it was received originally from Dr. Hillebrand.

I would premise, however, that the stalks are as destitute as grass of saccharine taste. But its value as a grain is more than commensurate to its lack of sugar. It is a most beautiful cereal, white, round, and delicate as sago in looks, and yields enormously. From a specimen riddled by weevils (nothing but what is good will they eat), I got eighteen grains to grow, planted last February. It looked like broom corn at first, but soon threw up eighteen or twenty side shoots from each root. On the top of each shoot expanded a head, heavy with most beautiful grain, like those I send you, ripening in four months from planting. From each seed there must have been a yield of more than 20,000 at the first cutting. But in a few weeks there shot up, both from the root and from each joint of the stocks left below the cutting, new heads, not quite so heavy as those gathered first, but from their number amounting to much more grain in the aggregate. Up to this date it has been gathered four times.

I July I gathered the first seed and planted again fresh from the stock, and in November gathered this which I send you, a larger growth than from the original.

Its good qualities as I have tested it are—

1st. An unparalleled yield.

2d. If well rooted, worms cannot kill it, as they do corn and beans, for it will throw out new shoots from the root like wheat.

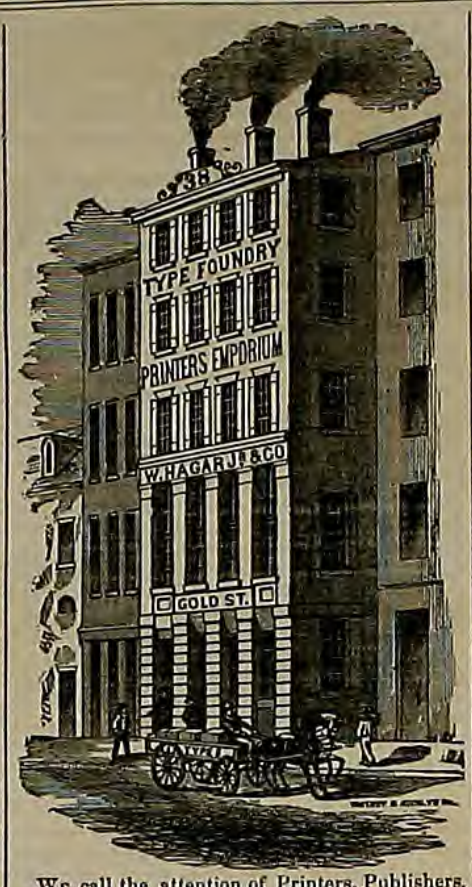
3d. It is a fine feed for cattle or horses, either as grain, or to be cut up and fed green for fodder. The latter process only makes it grow up thicker. But for feeding fowls it is unsurpassed. It fattens them equally well with wheat. Chickens just from the shell eat it as they would crumbs of bread.

With the aid of this grain, fowl raising may be carried on to any extent, as the grain is growing, ripening, and ready for them to shell out for themselves at any time. H.

Cotton.—By late advices from Boston, we learn that the samples of cotton raised on Maui, and sent to the United States for examination, have been heard from, and said by cotton brokers to equal if not excel any samples of American growth. An offer has been received to purchase any quantity that might be for sale. We have had several inquiries for seed, of late, but are unable to refer to any. Good Sea-Island cotton seed should be imported.

The New Hotel, Sacramento.—This superb structure recently opened by mine host of the "Dawson," is one of the striking objects in the architectural beauty of the Levee City. The New Dawson Hotel, is situated on the corner of J and Fourth streets, and extends from J to the alley on Fourth, being half a block, and presents a front on J of nearly one hundred feet. Rising four stories above the raised basement, it looms up above all other blocks like some grand castle, and presents to the eye a really superb structure, adding much to the beauty of J and Fourth, and, indeed, the whole city. The first story is of granite, the remainder of face brick, with cast-iron window caps, of gothic form; the whole general appearance is one of attractive beauty. The first story is already occupied as stores, except the receiving rooms and offices for the hotel, which are on Fourth street. Over two hundred splendidly furnished rooms, arranged in suits of rooms, for families or single boarders, with splendid hall and dining-rooms, make this hotel one of the finest hotels in California. It is unnecessary to compliment mine host of the "Dawson," for his zeal and perseverance in erecting and opening so splendid a building are the best proofs that he is now determined to have the *best Hotel in the State.* The location is central, and from the top one of the finest views of the valley can be had. Most sincerely do we commend the noble enterprise of the Dawson, and in calling attention to it, wish the proprietors the full merit they deserve, which is success.

Gold Excitement in San Francisco.—Quite a *hullaballo* was caused, during the present week, in the city of San Francisco, by the rumors that gold was found below Davis on Drum street, and wonderful stories of "big lumps" and rich diggings flew thick and fast. For two or three days, people flocked thither with shovels, picks and pans, and many a paragraph was the consequence. Passing up Clay street wharf we stopped to view the scene, and it was a scene for a painter. It reminded us of our prospecting on the "north fork," in '49. How sharp we looked for a "show" when near the bottom of the pan. We watched a *miner* here this day, and after hard washing, for some twenty minutes, he cried out, "here's gold!" All dropped their tools and ran to the discoverer, and he had found—a spec—one spec—so small, it was with difficulty seen at all. So much for the gold discovery in San Francisco. We believe the gin shops and lager beer saloons near by made the most out of it, and should not be surprised if they knew about it first.



We call the attention of Printers, Publishers, and all desirous to know where to purchase durable and elegant type, to the advertisement of Wm. Hagar, Jr. & Co., Type Founders, New York City, who desire to advise their friends and the printing interest generally that they have refitted their establishment with new machinery, and have availed themselves of every modern improvement which long experience or capital can command, and that they have, therefore, unequaled facilities for producing type of superior excellence and durability, and for supplying all orders for the same with great accuracy and promptness.

Their specimen books (which may be had at our office) will be found to contain everything desirable to the Newspaper, Book, and plain and fancy Job Printer, and they are constantly making additions to their already large assortment.

These gentlemen are the sons of Mr. Wm. Hager, who commenced the business in the year 1818, and still superintends the manufacturing department; and we have visited their establishment, an engraving of which we give above, and purchased from them, and find their pretensions fully sustained. In fact we can cordially recommend them to our Brothers in California (to whose orders we are assured they will give particular attention) and in the States.

They keep on hand, and furnish at short notice, *everything* required in a printing office, in fact, and wish it to be distinctly understood, their establishment is a Printers' Emporium, where *everything* can be had, from a Cylinder Press to the smallest article of service to the printer, all of which will be furnished on the most liberal terms, for cash or credit.

The Hotels of the Pacific.

Strangers who visit the Pacific Coast are desirous of knowing where to find a "Home," a residence of nearly eight years enables us to make an estimate of what a stranger needs on the shores of a strange land.

One of the best Houses for the great masses that have business at the Bay City, we announce to be the "What Cheer House." We do not believe there is a hotel keeper on the Pacific that deserves a better fortune, than Woodward of the "What Cheer." Really, Woodward is a genius—go look at his free baths, and free reading rooms; but first we note that the What Cheer is the house for the masses of the people; Woodward can accommodate all that visit him, and, what is important, he can *suit all.* Any person visiting this famed House, will see by the rush there, that it is justly a popular Hotel—and not only is the proprietor a favorite, but also his attentive book-keeper and clerk, and all in the several departments, are obliging and courteous.

The Rassette.—This Hotel continues to increase in public favor, and in addition to other attractions the proprietor has secured the services of G. W. Grannis, Esq., so long known as the efficient Clerk of the International Hotel. This act of Mr. Russette we esteem a wise one, for a more popular assistant could not be found than Mr. Grannis; he has "troops of friends," and they will be pleased to know he is a fixed piece of furniture at this House. Mr. and Mrs. Rassette, by their attentive care and kindness, will always secure a home to families and strangers at this Hotel. At the present time is very fully patronized.

The International Hotel.—This old and long established Hotel has again changed hands, and as will be perceived, now hoists the Flagg of the former proprietor of the Railroad House. It is only necessary to announce the name of "Haley," to secure a share of public patronage. M. A. French, Esq., so kindly remembered at the Rassette, stands ready at the desk of the International to welcome his many friends and those of Mr. and Mrs. Haley, and E. R. Robinson, Esq., whose names severally appear in the card in our columns.

We cheerfully recommend these favorite Hotels, confident that all will be pleased who take a residence there.

Good Reports for California.—Those who desire to make a good report of California, and to show their kindred and friends in the Eastern States the *true condition of California*, can find no better way than by sending them the *Reports of the State Fair*, which have been published in pamphlet form.

This work will do more to raise California in the estimation of those who desire to come to us and settle, than all other means that could be used, for it reveals the true resources of our State—and the Reports are corroborated by the authority of hundreds of names that are known in every State, and will carry conviction of the truths made therein.

Those who desire us to mail copies to the Eastern States, by remitting the amount, can have them forwarded at once.

Favors Received.

Good Wine.—"Good wine needs no bush"—this is an old proverb, and we can prove it, for we have tried it and found it so with the boxes of wine kindly sent us by Messrs. Kohler & Co., from their Wine Cellar in Merchant street. The Claret sent us we know is far better than most of the claret sold in California, and will compare favorably with the fine brands of the Burgundy, of France. The "Angelica" is indeed drink for those winged beings whose name it indicates, and makes one feel almost as happy. These are California Wines, and are of a very high character. We saw, when at their office last week, cases marked for the *London* market, and some cases marked James Buchanan, Pres. U. S. These, with casks and cases for many portions of the United States and Europe, are sure indications that California Wine will soon be known the world over. Those who desire *Pure California Wines* can find them at Kohler & Co.'s.

A Good Pen.—We have been furnished with one of "Prince's Protean Fountain Pens," from the manufacturing office in New York, and upon a thorough trial we have found it all that it is represented to be, and more. Our editorial duties often require of us many hours of continuous writing, and we feel that we have found in this pen, aid, equal to one-third of our labor. It is recommended as "self-supplying," feeding itself for "three to ten hours." "Incorrodible," in fact, "the pen of a ready writer." It is all these and more. It saves much in the wear and tear of the temper of an irritable person, who would otherwise be obliged to change pens, or clean them, besides the loss of time in filling an ordinary pen. We can say most emphatically, that no one can form any conception of the value of this incomparable invention until they have tried one. We veribly believe the pleasure derived from this pen in writing will aid in developing and in giving an easier flow of thought to the writer. We have written three, four and six hours steadily, and we have no words or sentence of words that can express the satisfaction we enjoy in the possession of this invaluable aid to our editorial labors. We know from the large list of talented writers that have highly extolled this pen, that it has no equal; and every person who is called to labor with the pen, should secure the "Protean" at once.

With the last steamer we received the last issue of the Patent Office Reports, and Smithsonian Reports, for which we are indebted to the Hon. C. Mason.

A most valuable work, being an Essay on the Morgan breed of Horses, with numerous fine plates of those splendid animals and their full pedigreee, with hints for breeding, breaking, &c., received from the publishers, C. M. Saxton & Co. New York.

Many other valuable and very interesting works named in our Literary Notices, also received from the publishers, to whom we return thanks.

Collections of Music, also named, will be reviewed—those who publish New Music, at the East, can remit close-rolled parcels by mail to us at San Francisco, and their announcement will be made in advance, so as to secure them orders.

A Fashionable Hat.—Stepping into a fashionable hat store on Commercial street, the other day, and while looking at the various forms and styles, suddenly the hat we had worn for some time and which had become somewhat worn and storm-beaten, was taken from our head, and one of the latest styles of Collins' (Collins makes the styles) was on our head in place of it. Not wishing to make any difficulty for the liberty which had been taken, we passed down Montgomery street with our fashionable beaver on, and we actually *bowed* and *recognized our friends*, with our *new hat on*, just as usual.

New Clothing Warehouse.—We stepped into the newly finished warehouse of Messrs. Mansfield & Wood, on Montgomery street, for a simple purchase, and were surprised at the elegance of the establishment. The style of the finish as a clothes warehouse is peculiarly neat and chaste, and we can say elegant, for that is the word, and the goods within are in keeping with the style of the store.

It will be no disparagement to other warehouses to say that there is no establishment on the Pacific coast that has a more perfect and complete assortment of goods, or of higher quality or style than Messrs. Mansfield & Wood. Of this fact visitors can be the judge. It is really a pleasure to view a store where there is so much that is in keeping with true elegance, and we hope this firm will be patronized according to their merits, for bringing to this market so splended an assortment.

Sheep Raising—Beet Sugar—Rice Culture—New Products.—We regret to be obliged to postpone several articles this week, but the two long articles which occupy so much space, compel us to do so; they will appear in our next with interesting statistics.

We regret also to be obliged to delay some very important correspondence from our corresponding editor at Boston, upon Eastern Agriculture, and visits to the Farms and Nurseries of the Middle, Western and Southern States.

MUSICAL FESTIVAL—It is not in our province to take note generally of Theaters, Concerts, Musical Festivals &c, but we are as fond of the Drama, of Concerts and Musical Feasts as any person need be, and without vanity can say we have enjoyed them in their highest degree of excellence, both in Europe and our own country; but we have so much trash now-a-days, so much that is not worth naming, that when we can promote that which is worthy we love to do so, and at the present moment we hear that our citizens will ere long be surprised by a Concert of Music of the very highest order, by an accomplished artiste, whose name we are not at liberty to give at present. From the most reliable authority we are informed that the selections will embrace Concert, Opera and Ballad pieces. The Debutante will be ably supported, and this festival of music will be worthy the patronage of the lovers of music. The particulars will be announced in about ten days.

MRS. LESDERNIER'S READINGS AT SACRAMENTO.—We are pleased to record the success of this highly accomplished lady at the Levee City. The first reading was on Friday evening last, at Rev. Mr. Benton's Church; the audience was large and of the highest character. The second reading was at the Capitol building, which was filled with one of the most fashionable audiences of the season. Mrs. L. was in costume, and her appearance and her readings surpassed expectation and gave perfect satisfaction, and won to herself much honor. We return thanks for the courtesy of tickets, and regret we could not be present to enjoy the readings.

TO OUR FRIENDS.—Will not our friends in the interior of the State become agents for us, and obtain additions to our subscription list? We wish to increase the value and interest of our paper by handsome plates and cuts, and if our friends will lend us a little of their aid, each one of our present subscribers can do us a vast amount of good. Who will send us the first list? Due record shall be made of such kindness. We ask attention to our journal—is it not worthy your support and aid?

REVIEWS OF AGRICOLA.—We announce with much pleasure the first number of a series of Reviews, which will appear regularly, from the able pen of our correspondent "Agricola," and which we know our readers will peruse with interest and profit.

GROWING RICH.—Two of the members of the Albion Quartz lead at Grass Valley, came down on Tuesday last, with their bag of dust, weighing about three hundred pounds; and this is reported as the usual amount. Every two weeks $60,000—only about $5,000 per day.

HUTCHINGS' MAGAZINE.—This valuable Magazine for February has been laid upon our table, and we are pleased to note the steady onward progress of this interesting work. It is worthy a liberal support.

STEAMER PAPERS.—We are under obligations to the Pacific Express Company for the files of Eastern papers, promptly furnished on arrival of the steamer in advance of the mail.

SUPERSTITIOUS BELIEF IN DESTINY—*The Mission of the Philanthropist.*—Napoleon the Nephew, like Napoleon the Uncle, believes that he has a great Mission to fulfill and that his life is in no peril until it is accomplished. But of how little importance to the world is the mission of an Emperor, when compared with that of a philanthropist like Holloway. He indeed without impropriety perhaps, might be supposed to be under the protection of a special providence, for his mission is to revive the sick, to soothe bodily anguish, to save human life; these are the deeds of beneficence and love and mercy. From all quarters we hear of the most astounding cures accomplished by his inestimable Pills and Ointment. To the former of these remedies all diseases of the skin, the muscles, and the glands, seem to yield like morning mists before the sun. The Pills put to the rout indigestion, liver complaint, and disorders of the bowels with equal certainty. Our "national disease," dyspepsia, is in peril of annihilation, and we have seen enough to feel assured that whenever Holloway's Pills are universally administered for this distressing complaint, it will inevitably be "expelled from society." Every day confirms the opinion we have heretofore expressed, that Holloway's medicines are the only preparations in existence that operate directly upon the sources of disease, and we should be willing, in case of sickness, to throw away the pharmacopœia, forbid the doctor our presence, and trust to them and THEM ALONE.—[Boston Journal.

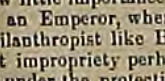
HOLLOWAY'S OINTMENT.—Salt Rheum, Scorbutic Eruption and Scrofula.—Nearly half the human race can bear witness to the efficacy of this wonderful unguent in the cure of these diseases. They never fail, however long standing or desperate the case may be. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot.

LITTLE AND LITTLE.

"Man wants but little here below
Nor wants that little long,"
"'T is not with me exactly so,
Tho' 't is so in the song." [J. Q. ADAMS.

MAN WANTS but LITTLE'S drugs and pills,
Tho' oft obliged to buy,
To cure himself of many ills,
And there 's the place to try.
For Little has so many ways
Each little ill to cure,
His science, art or skill displays
A remedy that 's sure.
A little ache, a little sprain,
A little pimpled sore,
Little can cure without a pain,
With Little Pills in store.

CITY COACH.
FARE ONE DOLLAR.



THIS Coach will run to and from the Steamers to the RASSETTE HOUSE, and to all parts of the City, taking passengers for One Dollar each, including Baggage. Orders left at the Rassette House will be promptly attended to by P. MATHEWS & J. ENGLISH.

To Butchers.
SAUSAGE SKINS AND HICKORY SKEWERS—Constantly on hand and for sale by CODINGTON & TABER, Wholesale and Retail Grocers, No. 110 Kearny street. v7-3 1m

MARRIED.

At Sacramento, on Wednesday, 22d inst., by Rev. G. J. Phillips, Hon. E. Burke, Judge of the Thirteenth Judicial District, and Miss M. A. Cole, of Sacramento, formerly of Cayuga, N. Y.

With many thanks for the cake we had sent us, we note that by this marriage the Judge has borne off as a prize, one to whom we know our readers will wish all prosperity and happiness—one who has often sung to them in the happy strains of Katie King.

O, cruel Judge! yes, Judge and Jury, too,
You managed well your cause, and when the roll
In court you call to give new life to you,
You seized and bore away "a shining Cole."
If Judges steal thus, only, there's no harm,
To take a Cole to make their hearts grow warm;
But, Judge, to you one prayer we bring:
O, let us sometimes hear from "Katie King."

SPECIAL NOTICES.

☞ CHRISTMAS GIFT.—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.
For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.
WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

A CARD.

☞ THE Report of the Agricultural Society, for the year 1856, including the full Reports of the Visiting Committees to the Farms and Vineyards throughout the State, Reports on the Exhibition, the Annual Address of the President, Address of Col. J. B. Crockett, detailed list of the Exhibited Articles, the Prize Essay on the Potato, with other important matter, is now issued in a neat Pamphlet of about eighty pages, illustrated. Persons desirous of obtaining copies will please address the Office of the CALIFORNIA FARMER, when copies will be forwarded as per order. Price Fifty Cents.

For sale at the Offices of the CALIFORNIA FARMER, State Agricultural Society's Rooms, Sacramento—and at No. 130 Washington street, San Francisco. Also, at Ullman & Co.'s, J. W. Sullivan's, J. J. LeCount's, San Francisco; Dr. J. C. Cobb, and J. B. Manny, San Jose.

A PERFUMED BREATH

WHAT lady or gentleman would remain under the curse of a disagreeable breath, when by using the "Balm of a Thousand Flowers" as a dentifrice would not only render it sweet, but leave the teeth white as alabaster? Many persons do not know their breath is bad, and the subject is so delicate their friends will never mention it. Pour a single drop of the "Balm" on your tooth-brush, and wash the teeth night and morning. A fifty cent bottle will last a year.

A BEAUTIFUL COMPLEXION may easily be acquired by using the "Balm of a Thousand Flowers." It will remove tan, pimples and freckles from the skin, leaving it of a soft and roseate hue. Wet a towel, pour on two or three drops, and wash the face night and morning.

SHAVING MADE EASY—Wet your shaving-brush in either warm or cold water, pour on two or three drops of "Balsam of a Thousand Flowers," rub the beard well and it will make a beautiful soft lather much facilitating the operation of shaving. Price only Fifty Cents.
W. P. FETRIDGE & CO.,
Franklin Square, New York.
For sale by all druggists.
☞ PARK & WHITE, Washington street, opposite the Post-Office, Agents for California. v6-19 3m

OY'S FINE OY'S.

THE luxury of a good "Oyster"—a genuine "Cove Oyster;" one of your Baltimore or New Yorker's (the very thought of which makes one's mouth water)—can always be found by those who can appreciate them, either in the Shell, Broiled, Fried or Stewed, and in true epicurean style, at "DAN'S OYSTER SALOON;" and with this appetizer, before or after, every other dish of dainties, such as those who appreciate good things can always find at DAN'S OYSTER SALOON,
Montgomery street, bet. Commercial and Clay,

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in a increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance presents habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom then will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,346 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

NORTHERN ASSURANCE COMPANY,
For Fire and Life Assurance at Home and Abroad.
Established in 1836—Incorporated by Act of Parliament.

To be a Man in this World!
YOU MUST OBSERVE
TWO VERY IMPORTANT MAXIMS!!
FIRST, THAT
"Economy is the only sure Road to Wealth;"
SECOND, THAT
"Early to Bed and early to Rise."
You all know what that does for a man.

By the by, speaking of Economy, Beds, Early Rising, &c., reminds us of those magnificent Patent French Spring Beds,

AND THE
EXTRAORDINARY REDUCTION
IN THE
PRICE OF LODGINGS!
AT
Woodward's What Cheer House,
119 and 121 Sacramento street,
87, 89 and 91 (new addition) Leidesdorff street.

Lodgings, per night	50 and 75 cents.
Lodgings in first class single rooms, furnished complete, per night	75 cents.
Meals, each	50 cents.
Board, per day	$1 00
Board, per week	6 00

If you cherish the least feeling of regard for the pressing wants of the "inner man," the exceeding low price of board at this establishment must convince you that this is the place.
In order to furnish food for the mind, there is a splendid READING ROOM, abundantly supplied with Papers, Periodicals, &c., from all parts. There is also an extensive Library of Choice Works.
☞ FREE BATHS.
In short, everything calculated to promote man's comfort can be procured at the What Cheer House, 119 and 121 Sacramento street—situated in the very center of business. It is also directly opposite the Mail Steamship Company's Office, and in the immediate vicinity of the United States Branch Mint. R. B. WOODWARD, Proprietor.
N. B.—This House is conducted on strictly temperance principles. v6-21 tf

LETTERS FROM HOME.

TO MY WIFE.

Choice packet! how dear, though soiled be its leaves,
And rude be the symbols its pages unfold;
How holy and pure the devotion it breathes,
More treasured, more valued, more precious than gold.
A language that burns with a celestial fire,
Its pathos descends to my innermost heart;
From oblivious joys of the past to inspire,
Fond memories dear, and hope to impart.
How oft I repair to my lonely retreat,
Weary and worn from the toils of the day;
Disheartened and sad, I despair at the fate,
Which dooms me in exile to wander and stray.
When wintry winds wail around my lone door,
In the dull dreary hours of midnight, alone;
By the flickering rays of the fagot I pore,
With delight o'er the pages of "letters from home."
Bright scenes of the past come hovering round,
The dearly loved form of my wife appears:
The prattling tongues of my babes resound,
Their mirthful peals in my recreate ears.
Entranced in the soul-stirring strains which I hear,
Enraptured I gaze on the beautiful scene;
In rich mellow tints friendly images dear,
Clustering around in my visions are seen.
Bright beams the future resplendent with hope,
Chasing away the deep settled gloom;
Imparting new life, revealing new scope,
There's solace! there's joy, in letters from home.

SACRAMENTO, Jan. 15, 1857. E. F. BRUNDAGE.

Good Influences.

THE following sketch upon the subject of "managing influences," from the pen of Bessie, written for Hutchings' Magazine, and copied into several other papers, we esteem one of Bessie's very best and happiest efforts. We wish Bessie would write more upon this subject of "managing" not only woman, but man, for the times seem to be out of joint, and, like sheep without a shepherd, every body and everything seems to be unmanageable. The deplorable condition of the married relations, and the sad and blighting influences now falling upon the youth of our land, should awaken every pen to action, that we might see if a better way of "managing" would not produce better results. What is witnessed daily in our midst is enough to alarm, for, from those high in power in our government, through the several grades, and in the whole range of private circles, there is needed a better "managing," if we desire prosperity to our State.

The closing paragraph of Bessie's sketch is worthy particular note, and while we admit the potency of a *good man's influence* over a woman that he loves, or that loves him, we would ask of Bessie, if she does not *also* believe, that a *good, true* and *devoted woman* can make of *her husband* not all that she pleases, but all that a *good man should be?*

Managing a Woman.

"Show me a man that can manage a woman!"
(OLD BLOCK.

Do you speak from experience, Mr. Block? or, are you so far without the pale of woman's influence that you have become a misanthrope? If not, look around you, and see, if among your acquaintances, there are not a few who make exceptions. Can you find none? Then, let me point you to two or three of mine.

Do you see that pale, care-worn woman, with high intellectual brow, and noble, dignified mien? She sits alone, in her little cottage, to-night, keeping sleepless vigil over a little piece of clay, which seems all too dainty for the cold earth yet to recover. The little child, the last of three, who has, for days past, struggled on the confines of eternity, is dead! The lamp in the little front parlor, emits a feeble light—emblem of the hope that is dying out in the mother's heart. God pity her—the time was, when her heart was as blithe as a May sunbeam; but wedded to an intemperate brute, who has, long since, ceased to regard her otherwise than as a slave to his caprices; there is nothing left to her, but the grave. Her weary, throbbing head will soon recline, on the dark, damp, welcome pillow. The little babe, her bright and beautiful boy—for whom her last proud hopes were garnered up, has only gone before—the waves of the Jordan of death are already dashing over her frail form—and the friends of her youth, those who know how to appreciate her excellence—are far, far away.

I have not asked concerning her history. I only know she lives in the alley, near our house; and, that she is poor and destitute, and her husband has *managed* to crush the loving, guileless heart, that ventured her life's happiness in his keeping.

Let me introduce you to another. There is my friend, Annie P——, Mr. "Block;" I was her bridesmaid fifteen years ago—the white orange wreath, and the snowy satin dress, were not less pure than the heart that beat so confidingly beneath them. She was most beautiful; but, it is said, "intellect and heart are the worst dower of nature," and she possessed both. That attachment came nearer my idea of a love-match, than any I had met with. He, the proud, the noble-hearted, and so handsome, and, like the heroes in the old romances, with a strong arm to battle with the caprices of fortune; and she, the sweet innocent being, who looked up to him, with such child-like dependence, as one superior to herself—it seemed as if they were formed for each other. When she gave her hand at parting, a tear trembled in her eye, for we were to see each other no more—for years—perhaps never. But a letter came, telling me of all the deep bliss which she enjoyed in her new home—an out-flowing of a heart fluttering and trembling with an excess of joy; intensely beautiful were the strange day-dreams which filled her soul. It spoke of lovers' walks, of fireside readings, and of two loving hearts. Years went by, on the wings of light and shadow, and strange things were told of Edward P——. First, a rumor came that he had become a spendthrift, and then, a gambler—and finally, that he had committed a crme, for which he was obliged to flee to elude the officers of the law; it proved from the latter he was exculpated by some legal technicalities, but the former was too true. I wish I could picture to you, Annie, just as she is—her inner and outer self—she is as white, as frail, and as pure as a lilly, yet, she has strong womanly character—a perfect contrast to her husband. Could you read her heart, you would there see only the records of disappointed hopes and inward conflict of her experience. They met with reverses, and had not the courage to brave misfortune, and meet it heroically, and is now the self-indulgent, exacting man you see him. He *managed* to squander his own and his wife's fortune, and now seeks the gaming table to retrieve his losses, and the wine cup to dull his sense of honor.

I was sitting alone, in my quiet, little sanctum, the other evening, when the door opened, and Annie entered; but the bright, joyous girl of years ago stood not before me. She came to lay her head upon the only breast that could sympathize with her in the land of strangers—to tell me of her heart's sorrow. She says, "an awful thought has obtruded itself upon me of late—that of leaving my husband and returning home—what shall I do?" Do no such thing, said I, it is a fearful step for a wife to take. Be the same angel you always have been, and take God at his word, who has said, "in due season ye shall reap if ye faint not"—and she returned to her cheerless home, to suffer, and endure, and bear patiently, like a good christian as she is, until such time as an all-wise Providence sees fit to remove the burden from her heart. In God's own appointed time, she will meet with her reward, and, over her night of sorrows, stars shall arise, and she will walk by their heavenly light.

And then, there is my old seminary chum, Mr. Block, Mrs. M——d (now a staid matron of thirty-five). The calm, sweet countenance before you, does not look as if it masked an evil spirit, does it? No—neither does it. It is the index of as happy a heart as ever beat. And yet, could the walls of No. 9 speak, they could bear testimony to many a shameful scene; for she was the worst specimen of feminine ugliness that I ever knew. Why she quarreled with me every week, and once came near being sent home, in disgrace. Being an only child of wealthy and indulgent parents, her every wish was gratified, and she was petted and spoiled. Her wayward and impetuous spirit could not, seemingly, be swayed by gentleness; even the tears of her companions, failed to soften her heart towards them. Her reputation for being a wild and heartless girl, always preceded her everywhere, and had found its way into the seminary before she arrived; and it was with many misgivings that I accepted her as my room-mate. Willfulness was her ruling passion, and she cared no more for the encouraging word, the tender look, the loving caress, the approving smile of her teachers and class-mates, than she did for the beautiful "book" that I one day presented to her; thinking in my childish simplicity, to gain her friendship; she looked daggers at me, and threw it out of the window. After that, I sought no more for her confidence, and our business hours were spent apart. Two years after, I heard of her marriage to a young clergyman, whom I knew intimately. His was the very nature to love with that devotion—which the poets of old have sung—but his choice was to every one a mystery! He yielded up the treasures of love to the proud beauty; and if ever I saw two beings in the world, whom I thought too happy, it is Mrs. M——d, and her husband. No thorns seem to have grown among the roses of their lives; and one by one comes forth the blossoms of hope and love. There is a purity in the very atmosphere of their home, which charms away the world's infections. What?—do you ask—has wrought this great change? Ah! Mr. Block, he knew just how to *manage* her; *like* begets *like*, you know—and *love* begets *love*; and the mystery of sympathy is curious power—that which makes us feel we possess the rich blessing of a heart on which our own can lean; and, when our faults are kindly made known to us, by those to whom we have surrendered up the best and holiest affections of our natures, we are very apt to commence a reform. I have always thought, and still persist in thinking, that a good man can make his wife almost what he pleases.

BESSIE.

THE FIGHTING EDITOR.—Mrs. Prewett, editress of the Yazoo City (Miss.) Banner, writes concerning the fighting editor of that paper, as follows: "Some misapprehension seems to exist about our Editor, Mr. Smith. We are constantly receiving *important* business letters addressed to him. He is *only* the fighting editor, and has nothing to do whatever [lucky man] with the money matters of this concern. Challenges may be addressed to him as heretofore, and other warlike missiles, insults, denunciations, &c., &c. We have no objections to having *duns* included in the category, and as we regard *duns as personal*, and particularly offensive, persons having business of this sort with this office will please address Mr. Smith, the fighting editor."

A HAPPY FIRESIDE.—Home is the residence not merely of the body but of the heart; it is a place for the affections to unfold and develop themselves; for children to love and learn, and play in; for husband and wife to toil smilingly together, and make life a blessing. The object of all ambition should be to be happy at home; if we are not happy there, we cannot be happy elsewhere. It is the best proof of the virtues of a family circle to see a happy fireside.

PUNCH gives as a notice to fashionable shoppers that, ladies not intending to purchase anything, are requested not to keep any one article longer than ten minutes!

MUSIC not only improves a man's tastes but his morals. It gives him a taste for home that amends his habits wonderfully. The man who spends his evenings with a piano, is seldom seen in dram shops, and never with night brawlers. We believe in music, and candidly think that one flute will do as much towards driving rowdyism out of a neighborhood as four policemen and a bull-dog.

SAYS a scientific writer: To obtain some idea of the immensity of the Creator's works, let us look through Lord Ross' telescope, and we discover a star in the infinite depths of space whose light is 3,500,000 years in traversing to our earth, moving at the velocity of twelve millions of miles in a minute. And behold God was there.

MAY not taste be compared, asks Greville, to that exquisite sense of the bee, which instantly discovers and extracts the quintescence of every flower, and disregards all the rest of it?

You are at all times what God sees you to be; you are not at any time what man judges you to be, only so far as his judgment is an agreement with Divine light.

A benevolent gentleman used to give away wood to the poor by the cord, in order, as he said, to have it re-*cord*-ed above.

HOME comprises all the space that a woman should desire to shine in.

Anecdote of Harrison Gray Otis.

ON a cold, rainy Sunday morning in October, several years ago, Hon. H. G. Otis found himself traveling through the State of Connecticut. An important cause was to be argued by him, on the next Monday morning, in Boston, and he had started from New York on the previous Saturday, and had rode all night, in order to meet his legal engagement.

After he had finished his breakfast at his hotel and was about proceeding on his way, he was informed that it would be perfectly useless to attempt to drive through the State, as he would certainly be stopped by the lynx-eyed "tiding man."

Connecticut was of old a very pious State, and her rigid laws against traveling on the Sabbath, have made her Puritanic morality notorious. But Mr. Otis was inclined to try his shrewdness against the anti-Sabbath breaking officer. Accordingly, he went to the office of a friendly barrister in the town where he breakfasted, and asked of him the favor of a loan of his Revised Statutes of the State until he should be clearly beyond her borders. The attorney complied, and Mr. Otis, with gig and law-book, proceeded on his journey.

He had scarcely turned the second corner, when as he and everybody else expected, a grave looking puritan, in the shape of a tiding man, took his horse by the head, and coolly informed him that he was a prisoner; suggesting at the same time that he had better attend him to the next jail!

Mr. Otis, nothing daunted, and assuming his legal dignity, replied: "Sir, I respect the day and the law, but I shall be obliged to break the Sabbath, the day, and your head, if you don't quietly remove yourself from my path."

But the pious officer was not to be bluffed by this, and again repeated his command.

Mr. Otis saw that nothing was to be gained from intimidation, and that he must fall back upon his last resource. He accordingly began to feel around him for the Revised Statutes."

"Well, my friend," said he, "it won't do any hurt to look at the law a little—which puts me so completely in your power; for you know it is a good old legal maxim, that no man shall be condemned, but by the judgment of his peers, and the law of the land."

Mr. Otis opened the statutes and turned at once to the article against Sabbath breaking. "You will find it all there," said the officer, with a shrewd shrug of his shoulders at the idea of nabbing and penning a person whom he now discovered to be a live attorney. Mr. Otis proceeded to read.

"If any person shall be guilty of breaking the Sabbath, as aforesaid, it shall be lawful for the tiding man to *arrest* and *stop* him, etc." The eye of the great lawyer slyly sparkled as he read the statute, though with rather a doleful air he added—"it is true, sir; the law is against me, and I must submit."

"Well then," rejoined the tiding man, "you must make up your mind to quarter in the lock-up till to-morrow, so, if you please we will ride back together."

"O, no!" retorted Otis; "that will never do. I don't intend that you shall ride back, or with me, either—to-day! The statute reads, mind you—that you shall *arrest* and *stop*. That is all. You can stop me as long as you please. But that is the extent of your power. The law says nothing at all about your carrying me off to the lock-up—nor of your riding in my gig on the Sabbath, either!"

It was a terrible stormy day. The poor tiding man was already completely drenched, and the prospect of standing by the gig all day and night, in a muddy road, was by no means either pleasant or compatible with the dignity of his office.

Mr. Otis again repeated, "I still wish you to consider, sirr, that I am your prisoner—for so reads the law—nothing more. *You* can go back if you please, but *I* intend to *stop* where I am"—and accordingly he drew his robe around him, and made preparations for a quiet snooze, till Monday morning.

The officer looked as blank as a piece of marble, and felt as uncomfortable as a young gosling in a shower. He gazed a moment or two upon the composed expression of the learned advocate, and—sure enough he did go back. Mr. Otis stopped—just long enough to permit his legal friend to get comfortably out of sight—and then he quietly proceeded on his way; reaching the line without further molestation.

The fame of this "legal quirk" soon spread and in a few weeks nothing was heard or seen of tiding men stopping travelers *under the Statute!*

DIAMOND CUT DIAMOND.—Reading the following, one is inclined to think that Yankee "cuteness" is not a native production after all, and that the genius for getting the best of the bargain came over with the early settlers, and so is a transmitted quality. At any rate this story is nearly as good as any told of our itinerants.

A rich scene recently occurred at Wick. One of those itinerant auctioneers who visit Wick at the close of the fishing was busily plying his vocation in the market place, before a considerable crowd of people, and among other articles held out a bridle for sale. Starting it at 4s. an individual in the crowd offered "a crown," which was immediately accepted, and payment demanded. "It was the crown of my hat," said the purchaser. "Very well," responded the other, "a bargain's a bargain; hand it here." Thinking the whole affair a joke, and judging himself very clever, the individual handed up the hat and received the bridle; whereupon the auctioneer coolly proceeded to appropriate the "crown" to himself, by cautiously cutting it out of the hat with a knife, and when the process was over returning the crownless hat to its owner! By this time the joke had decidedly turned against the buyer, and the roars of laughter which greeted him as he walked away with his bridle and crownless hat, lately worth perhaps 10s. must have been gall and wormwood, and were greatly increased when the auctioneer naively offered him "a crown" if he would return the bridle. But to make the best of a bad bargain he kept the bridle, and the other party held the crown.—[Northern Ensign.

Are you an Odd Fellow? No sir, I've been married a week. I mean do you belong to the Order of Odd Fellows? No! I belong to the Order of Married Men! How dumb! Are you a Mason? No! I'm a carpenter by trade!" Worse and worse! Are you a Son of Temperance? Confound you, no! I am a son of Mr. John Gosling. The querist went his way with something of a flea in his ear.

A NEW JELLY.—A sample of a new kind of jelly, called "poha jelly," made from a root which grows spontaneously in the Sandwich Island, has been received in New York. It was made under the direction of Mrs. C. B. Andrews, the wife of a missionary at Molakai, and has a far more delicate flavor than any of the jellies known to commerce.

SEEDS, &c.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.
THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

ALSO,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE,
OR,
SORGHO SUCRE.
PURE SEED.
THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 30 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,
W. P. ORME, Atlanta, Georgia.
ATLANTA, November 7, 1856. v6-22

FIRST PREMIUM AGAIN!
R. H. VANCE,
HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.
Rooms, cor. Sacramento and Montgomery streets, SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

MEDICINES, &c.

FOR THE REMOVAL AND PERMANENT CURE OF
All Diseases arising from an Impure State of the Blood or Habit of the System.

In this preparation are strongly concentrated all the medicinal properties of Sarsaparilla, combined with the most effectual aids, the most salutary productions, the most potent simples of the vegetable kingdom; and the combination is such that one modifies and improves the other, producing a compound differing entirely in its character and properties from any other preparation, and unrivalled in its operation on the system when laboring under disease. It has been so fully tested, not only by patients themselves, but also by physicians, that it has received their unqualified recommendations and the approbation of the public; and has established on its own merits a reputation for VALUE and EFFICACY far superior to the various compounds bearing the name of Sarsaparilla.

From the Army.

MONTEREY, CAL., January 18, 1850.
MESSRS. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefited as I have been. I arrived here by the overland route, about the first of October last. A few days after I was attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely.
With high regards, yours, &c.,
J. H. MILLER, Lieut. U. S. A.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists and Chemists, 100 Fulton-street, corner of William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

CLOVE ANODYNE
TOOTHACHE DROPS.
Complain no more of Aching Teeth.

These Drops have been extensively used by thousands, whose experience has proved that the Anodyne will give immediate and permanent relief after the failure of every other remedy. It is pleasant to the taste and smell, and a few applications will entirely remove the pain and soreness from a decayed tooth, so that it may be filled and rendered as useful as ever. When the pain proceeds from the face, or from the gums around a tooth apparently sound, this Anodyne will give a speedy relief by rubbing a few drops on the part affected.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, No. 100 Fulton-street, corner William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v6-21 3m

MEDICINES, &c.

J. L. POLHEMUS
DRUGGIST

OFFICIAL NOTICE!
POLHEMUS' DRUG STORE
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.
I claim to be the Oldest Established Legitimate Druggist in this City.
Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.
Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for
Half the Price Usually Charged
By other Druggists, legitimate or illegitimate, and of
The Purest Drugs and Chemicals.

THIRDLY.
I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.
We Keep Open all Night!
And charge no more for medicines than in the day time.

FIFTHLY.
We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.
Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.
We have received the agencies for the following valuable articles:
Budds' Nerve and Bone Liniment, warranted the best in California.
Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.
Flower of the West, for Fever and Ague.
Delight's Spanish Lustral, for the Hair.
HUDSON'S CALIFORNIA GROWN MUSTARD.
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.
We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.
v6-12 J. L. POLHEMUS.

California Steam Navigation Company.

THE fast and splendid low pressure steamers NEW WORLD and ANTELOPE will leave on alternate days for SAN FRANCISCO, at 3 o'clock P. M., from the foot of K street.
The steamer NEW WORLD, S. Seymour, Master, will leave on Tuesday, Thursday and Saturday.
The steamer ANTELOPE, E. A. Poole, Master, will leave on Monday, Wednesday and Friday.
The steamer HELEN HENSLEY, E. C. M. Chadwick, Master, every Sunday, at 2 o'clock P. M.

For Marysville and Intermediate Landings
Steamer CLEOPATRA, W. H. Taylor, Master, will leave Tuesday, Thursday and Saturday; and
Steamer GOV. DANA, W. S. Summers, Master, will leave Monday, Wednesday and Friday, at 7 o'clock A. M. from bark Orb.

For Colusa, Red Bluffs and Intermediate Landings.
The steamers SAM SOULE, G. V. Hight, Master; and GEM, M. Littleton, Master, will leave for the above named places on Tuesday, Thursday and Saturday, at 7 o'clock A. M., from the storeship Antelope.

For freight or passage by any of the above boats, apply on board, or at the office of the California Steam Navigation Company, on board the brig Globe.
v5-10 A. REDINGTON, Agent.

REMOVAL.
Mercantile Library Association.
THE ROOMS OF THE ASSOCIATION, being those formerly occupied by the Pacific Club, on the corner of Montgomery and Jackson streets, over the Banking House of Messrs. Pioche, Bayerque & Co., will be thrown open to the public on Monday next (15th of December instant). The rapidly increasing extent of the Library and the constant accession of members, rendered it imperative that more spacious apartments should be secured for the purposes of the Institution. The new rooms will afford ample accommodations and will be fitted up with every regard to comfort and convenience. A GALLERY OF FINE ARTS will constitute a new and attractive feature in the new rooms, and the attention of citizens and others having Paintings and other Works of Art in their possession, is respectfully called thereto; all such objects will be received and receipted for; they will be conspicuously displayed, and will be at all times subject to the order of the depositors. To artists especially this will afford a favorable opportunity to exhibit their works; and the Directors cordially invite them to avail themselves of the advantages thus offered.
Books of Reference, Maps, Charts and Manuscripts would be gladly received on the same conditions; also, Natural Curiosities and Specimens for the formation of a Cabinet.
In order to allow proper time for the removal and rearrangement, the Library and Reading will be closed from this date, until Monday, December 15th. v6-24

To Architects.
PLANS ARE SOLICITED FOR A HALL FOR THE MECHANICS' INSTITUTE.
THE HALL to be in size—seventy feet front by one hundred and twenty-five feet in depth, three stories high above the basement; the first story to be designed for Stores, the second for a Public Hall the entire length of the building, and the third Miscellaneous. The Hall to be situated on a corner lot, seventy feet front by one hundred and thirty-seven and one-half feet in depth.
Plans for the above will be received up to the FIRST DAY OF MARCH NEXT, and for the set of plans to us appropriate, and best adapted to the wants of the Institute, the sum of Three Hundred Dollars will be paid to the Stock of the Institute, when such plans shall have been adopted by the Board of Directors.
N. B.—Architects will accompany their plans with the necessary explanations and the probable cost of building, and in no case must their name appear on either plan or explanation; but may be designated by a private mark, by which they may be identified by a duplicate.
By order of the Board of Directors.
G. H. KENT,
Chairman of Committee on Buildings.
Hall of the Mechanics' Institute, Dec. 18, 1856. v6-24

News by the Steamer.

THE P. M. S. Co.'s steamer Sonora, F. W. Lappidge, Esq., commander, arrived here this day, at half-past one, P. M., with the mails and 619 passengers, of whom 128 were ladies.

The most important news by this steamer, is the desperate condition of Walker and the army at Nicaragua. Walker has been most signally defeated in three battles, and with heavy losses of men and ammunition; the Costa Ricans have now full possession of the transit route, and have ample ammunition and forces, both by land and water. A proclamation has been issued by the Costa Rican General, offering free pardon and conveyance to Walker's officers and men if they will leave Walker, and from appearances no doubt his fate will soon be sealed, and the Nicaragua Expedition exploded.

The next important event announced by this steamer, is the great question of the Missouri Compromise, which report speaks as having been decided by the Supreme Court of the United States as unconstitutional, thus opening questions of debate which only lead to strife and disunion. We hope this report may prove untrue.

Fearful shipwrecks are recorded at New York. One, the packet ship New York, with 300 passengers, stranded on Island Beach, New Jersey; the passengers all saved. Another, the British bark Tasso, at Barnegat Bay; in attempting to land the passengers, six men were lost.

The U. S. Mail steamship Hermann, which left Southampton for New York, on the 3d December, returned to that port disabled, after encountering a terrible gale.

The loss of numerous vessels and many lives are recorded.

Great interest was manifested in England by the arrival of the old Artic discovery ship Resolute, which was returned and presented to England by the U. S. Government, in charge of Capt. Hartsteen, of the U. S. Navy. The Resolute was recovered from the ice country by an American whale ship. A public festival scene was made, the Queen and Prince Albert visited the ship, Capt. H. with the American officers, were made lions, the national flags entwined, salutes fired, and a union and exchange of kindly feelings made the occasion one of more than ordinary interest. We trust these generous and reciprocal feelings may continue.

A great fire at Philadelphia—loss $100,000.

A terrible fire at Halifax, N. S.—loss $100,000.

A treaty has been signed between Great Britain and the United States, relative to Nicaragua and the Costa Ricans.

A second bloody tragedy has been enacted at the N. Y. State Prison, by which the warden, Solen H. Fenney was killed; the deputy warden Galen C. Walker, was murdered two weeks previously.

England has formally declared war against Persia, and it appears Russia goes to the aid of Persia.

The grain markets of New York are firm, and farmers crops heavy and prices good.

"A GOOD MAN HAS GONE"—DEATH OF FATHER MATTHEW.—The Sonora brings the news of the death of Father Matthew, the great Apostle of Temperance, of Ireland. Few men have ever done as much as this noble philanthropist, and few ever acted with as pure and self-sacrificing a spirit. His name will ever be hallowed and cherished in the memory of the warm-hearted and good. We look back to the dark winter of '46–47, when starvation and distress so widely prevailed in Europe: it was our privilege to labor with him then and there for the destitute, and we can speak from experience of the nobleness of his life and conduct. The news of his death will be received with deep sorrow, although he had arrived at the age of 67 years.

THE KING MONUMENT.—In examining the marble works of T. W. Ladd, on Bush street, among the many specimens of superior skill that are displayed in his room, our attention was attracted to the piece of marble, now preparing for the monument of the late lamented James King of Wm. The inscription piece is now ready for the sculptured engraving, which will be upon it; it is a fine clear block of Italian marble of some four feet high and three feet square, upon which will be engraved the following: on the front, surrounded by a wreath, the simple words—

"James King of William."

Upon the reverse—

James King of William,
Born Jan. 28, 1822,
Died
May 20, 1856.

This monumental piece will be placed upon a solid and handsome base, and from this the engraved piece will rise a beautiful obelisk of fifteen feet; the whole will be not only chaste and appropriate, but forever be a fitting monument of one of the best of men, and of one of the most eventful periods of California history.

This monument is the work of P. W. Sterling.

Amusements.

THE PACIFIC MUSEUM is now one of the principal places of interest of an evening—hundreds go constantly to see Adams order Old Bruin and the cubs perform their gymnastics. Adams is a genius, and deserves a good patronage. Wirsen too, charming the serpents, and they coil around him with such dexterity that one almost can *feel them crawl*. The Museum is worthy a visit.

BUNKER HILL AND CHARLESTOWN.—This most interesting exhibition is attracting increasing attention, and is indeed worthy the patronage of all who have any love of our early history or the scenes of the Revolution. This Diorama has been gotten up at very great cost, and as a work of art is esteemed very excellent. In connection with the Diorama, are several amusing exhibitions of Ventriloquism, and other amusements, by which the time can be pleasantly and well as profitably employed.

HORTICULTURAL, &c.

[PREMIUM ORNAMENTAL NURSERY.]

Mountain View Nursery,

Three-Quarters of Mile from San Jose.

THE Proprietor offers for sale the present season a large stock of fine Fruit and Ornamental Trees, Vines, Roses, Evergreens, and every variety of Garden Plants.

Particular attention is paid to the cultivation of Native Trees, and particularly the Evergreens of California, which are as fine as the world can produce.

A very fine collection of extra fine Roses are worthy of especial notice.

The Proprietor, having been in previous years connected with his brother in the United States Nursery, on the new Mission Road at San Francisco, and having former experience, is confident of pleasing all who may favor him with their patronage, which is respectfully solicited.

WM. O'DONNELL.

v6-21 3m

FRUIT TREES! FRUIT TREES!!

Oak Grove Nursery, Alameda.

THE subscriber, whose stock consists of the finest varieties of FRUIT TREES, imported from the Nurseries of HOVEY & CO., Boston, and now from one to four years old, many in bearing the present year, consisting of—

Dwarf Pears	20 varieties.
Plum	12 "
Apricot Plum	6 "
Foreign Figs (now in fruit)	7 "

All the best varieties of Apple, Peach, Nectarine, &c.

3,000 Los Angeles Grape Vines, now in fruit, three years old.

Strawberry Plants, &c.

Persons wishing to furnish their grounds will do well to visit the above Nursery and select for themselves, bearing in mind that to insure the healthy growth of a tree, it should be transplanted in the fall.

For particulars inquire of S. L. PALMER & CO., agents, corner of Washington and Davis streets, San Francisco, or to

v6-10 3m GEO. B. COOK, Proprietor.

United States Nursery,

On the New Mission Road, San Francisco.

THE Proprietor of this large Nursery and Garden desires to call the particular attention of the friends of Horticulture to the collection now offered, among which are the following:

Fruit and Ornamental Trees;
Roses, of every choice variety;
Green-house Plants, and Garden Plants.

Together with every article needed in Orchard, Garden, Greenhouse, Parlor or Garden.

The undersigned would most respectfully invite purchasers to visit his Garden and Greenhouses. Having been long established in the business he is confident he can furnish everything desired, as agreeably as any other establishment.

v6-21 tf JAMES O'DONNELL.

Linnæan Botanic Garden and Nurseries,

Flushing, New York.

WM. R. PRINCE & CO. offer for sale as follows:

Fruit and Ornamental Trees (including evergreens) of all kinds and sizes;

Shrubbery, Roses, Bulbous and Herbaceous Flowering Plants;

Dahlias, Tree and Herbaceous Pæonies;

Greenhouse Plants of all kinds, including 500 splendid varieties of Camillias.

ALSO,

Stocks for ingrafting Fruit Trees;

Young Trees of all kinds suitable for Nurseries;

Fruit and Ornamental Tree and Shrub Seeds, including Evergreens;

Garden, Agricultural and Flower Seeds in any quantity, at lowest wholesale rates, of the present crop, and warranted of the first quality;

DIOSCOREA BATATAS, or Chinese Potato, the only American grown stock in the Union;

Figs, Olives, Pomegranates, Licorice, Tanner's Sumach, Madder, &c., in quantity for plantations;

Strawberries, Raspberries, Gooseberries, Currants and Blackberries of all the superior varieties.

This establishment comprises the most extensive collection in the Union.

Priced Catalogues at the lowest rates will be sent to applicants.

N. B.—Apple, Pear, Peach, Plum, Cherry, Quince, Almond, Prune, Apricot and other Fruit Seeds in any quantity. v6-5

Pioneer Nursery.

THE undersigned, proprietor of this now well established Nursery, to which was awarded the First Premium by the State Agricultural Society at its last Annual Fair, announces to his friends and patrons that he is prepared to offer them, the present season, a collection of Fruit and Ornamental Trees equal to any in the country, and far superior to any heretofore offered.

Having had in bearing last year, forty-seven kinds of Apples, and having in bearing the present year, about thirty-five varieties of Peaches, added to the knowledge we have acquired by comparing them with other varieties grown in various localities, we have been enabled to ascertain with certainty what kinds are worthy of culture, and such varieties only do we offer to the public the present season.

We call your attention particularly to our Seedling Peach, named by the Academy of Natural Sciences, "Myers' Rareripe," which we offer this season for the first time. The following certificate will speak for itself:

ALAMEDA, July 25th, 1856.

The subscribers having seen and eaten of the new variety of Peach grown by A. H. Myers, in his "Pioneer Nursery," Alameda, and by the Academy of Natural Sciences of San Francisco named "Myers' Rareripe," do cordially and unhesitatingly pronounce it a most valuable acquisition to the Pomology of our State, in regard both to its early ripening, and its melting, luscious qualities, being in these respects superior to any variety of Peach that we have yet met with on this coast.

George Lee, Lee's Garden, Oakland.
Henry Gibbons, M. D.
N. W. Palmer, firm of Sonntag & Co., Horticulturists.
T. J. Nevins, Amateur Gardener.
A. M. Crane, County Judge.
Wm. Sherman.

We speak to our friends and patrons thus early, that they may be apprised of our ability to supply them with all the desirable varieties of Fruits, and thus save the trouble and expense of sending out of the country for Trees; and we can assure them that time and money will be saved by giving us a call.

Our stock embraces—

40,000 Apple Trees, forty varieties, one, two and three years old;	
30,000 Peach Trees, in bud, best varieties;	
4,000 Peach Trees, two years old,	"
1,000 Pear Trees,	"
1,000 Cherry Trees,	"
1,000 Plum Trees,	"
1,000 Apricot Trees,	"
1,000 Nectarine Trees,	"

Also, Almond, Fig and Quince Trees;

25,000 Currant Bushes, with a sprinkling of everything rich and rare, usually found in a well regulated Nursery.

We particularly invite our citizens to our Nursery and examine for themselves before purchasing elsewhere. Information respecting the best varieties of fruits, and the planting and pruning of them cheerfully rendered.

A. H. MYERS.

v6-19 3m Pioneer Nursery, Town of Alameda, Alameda Co.

Smith's Pomological Gardens

AND

NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast.

Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear,
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous to mention.

We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

*** Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.

v6-19 3m A. P. S.

EDUCATION.

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by CORNELIUS J. FLATT, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17TH of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS: PER MONTH

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective, Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.

No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.

For further information or references, address the Principal.

v6-24 C. J. FLATT.

Young Ladies' Seminary, Benicia.

MISS MARY ATKINS, : : : : : : PRINCIPAL.

THE School Year of this Institution is divided into two terms of five months each; but the term commencing January 5, 1857, will close May 1st, 1857, in order that the semi-annual vacations may take place hereafter in May and October.

At the close of each term there will be a thorough examination of the pupils in all of their studies.

The Course of Instruction is such as is usually pursued in High Schools, and also includes the accomplishments of Drawing, Painting, Vocal and Instrumental Music.

The government of the school is gentle, but decided. A daily account of the recitations and deportment of each pupil is sent, monthly, to the parents, who are thus regularly informed of the progress of their daughters.

All of the pupils board either with their parents or at the seminary, and are under the special care of their parents, or of the teachers of the Institution.

The School is open to inspection at any time, and friends are cordially invited to visit it; but no pupils can receive calls from any persons, excepting those introduced by the parents and guardians to the principal.

TERMS: PER MONTH.

Tuition in the Higher English Studies	$8 00
" " Common " "	6 00
" " Music and use of Instrument	10 00
" " Ancient and Modern Languages	5 00
" " Drawing and Painting	4 00
For Board (per week)	6 00
For Washing (per session)	25 00

No extra charge will be made for Vocal Music or Embroidery; neither are the pupils required to furnish their rooms, bedding, &c.; but each pupil must have every article of clothing distinctly marked with her name.

Payments are to be made invariably at the beginning and middle of each term, in advance.

v6-20 tf

THE "HORTICULTURIST" AND Journal of Rural Art and Rural Taste.

COMMENCED BY A. J. DOWNING,

Author of "Landscape Gardening," "Designs for Cottage Residences," "Fruit and Fruit Trees of America," "Country Houses," etc.

Edited by J. JAY SMITH, Editor of the North American Sylva.

THIS popular publication, which is gradually extending its influence throughout the country, and is becoming indispensable to the tasteful Gardener, the Fruit Culturist, and the Floriculturist, will be continued under the editorship of J. Jay Smith, whose ability and taste in matters of country life are highly appreciated through the country.

The cultivation of the beautiful, both in Nature and Art, is justly esteemed an important element in education, and recommends itself to the attention of all who wish to make their dwelling and grounds attractive, and to surround themselves with those luxuries and adornments that spring from the fruitful bosom of the earth when cultivated by the practical hand. The typographical execution of the HORTICULTURIST is designed to be an index to its contents—neat, chaste and elegant. It embraces within its scope—

I. THE DESCRIPTION AND CULTIVATION OF FRUIT AND FRUIT TREES—a subject of vast importance, and in which we are already more interested than any other people.

II. THE DESCRIPTION AND CULTIVATION OF FLOWERS AND FLOWERING PLANTS AND SHRUBS, from the most delicate and tender to the most hardy and robust.

III. TO THE DESCRIPTION AND CULTIVATION OF ALL EDIBLE PLANTS, which are, or should be, grown in our gardens.

IV. TO GARDENING AS AN ART OF TASTE—with Designs for Ornamental or Landscape Gardening.

V. TO RURAL ARCHITECTURE—embracing Designs for Rural Cottages and Villas, Farm Houses, Lodges, Gates, Vineries, Ice Houses, etc., etc.

VI. TO ARBORICULTURE—or the Planting and Culture of Forest and Ornamental Trees.

VII. TO BOTANY AND ENTOMOLOGY—so far as these branches are connected with the general subjects to which the work is specially devoted.

The extended and valuable correspondence of THE HORTICULTURIST presents the experience of the most intelligent cultivators in America; the superior illustrations, and the instructive and agreeable articles from the pens of the editor and contributors, make it eagerly sought after by even the general reader interested in country life. To all persons alive to the improvement of their gardens, orchards, or country-seats—to scientific and practical cultivators of the soil—to nurserymen and commercial gardeners, this Journal, giving the latest discoveries and improvements, experiments and acquisitions in Horticulture and those branches of knowledge connected with it, will be invaluable.

A New Volume (12th year) commences with the January number for 1857; and it will be the constant aim of the editor and publisher, by every means in their power, to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style of the periodical press, each number containing 48 pages, embellished with a frontispiece and several other original and well-executed engravings. At the end of the year it will make a volume of six hundred pages, beautifully illustrated with over 100 engravings, many of them drawings of fruit and flowers from nature. These volumes, if taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature.

TERMS—Two Dollars a year—Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the art—Price, $5.

☞ All subscriptions must be addressed to the Agents, or to. ROBERT PEARSALL SMITH,

v6-22 tf 17 and 19 Minor street, Philadelphia.

IMPORTANT TO INVENTORS!

LOW, HASKELL & CO,

SOLICITORS OF PATENTS AND PUBLISHERS OF THE

"INVENTOR."

Nurserymen and Tree Dealers supplied at liberal discount from regular prices.

Purchasers are invited to call at the Nursery of the subscriber before purchasing elsewhere.

v6-11 1m HENRY HAILE, Alameda, Alameda county.

AGRICULTURAL.

The Farmer's Drill.

[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 29th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.

Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.

This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

For full particulars address

M. G. GRIFFITH, Agent, Diamond Springs, Cal.;
Or to C. FINKBONER
(Of the firm of G. W. Stewart & Co.),
Grain Dealers, San Francisco.

v7-2 3m*

L. P. & W. F. DODGE'S

DOUBLE ACTING PUMP.

(Patented June 7th, 1853.)

THESE Pumps are double acting, and combine both the Suction and Force Principles. The Pistons are of the best bell metal composition, making them available for use in either hot or cold liquids.

The Cylinder is without divisions or chambers, has no valves at the eduction port, and is bored out perfectly true and smooth. From the construction of the cylinder and water passages, the pistons require no packing, being fitted perfectly to the cylinder. Two important evils in Pumps generally, are thus overcome—viz.: the amount of power required to work them, and the wear of the packing. The cylinder and pistons being perfectly true and smooth, it naturally follows that there should be less friction, and, consequently, less wear, than in pumps generally.

The water enters the cylinder upon its side, at each end alternately, passes through the piston heads, and is discharged through the round air-vessel in the center of the pump. These pistons are each furnished with a valve, connected in such a manner that both must operate simultaneously, one valve opening at the precise moment the other closes; consequently these pumps may be run at higher speed than pumps generally.

These pumps have received numerous Medals, Diplomas and commendatory notices from various State and and County Fairs, including Medal and Diploma at the Crystal Palace Exhibition in New York.

The power of a single individual applied to the size usually furnished for family use, is sufficient to draw water from a well twenty-five feet deep, and throw it upwards of fifty feet from a hose-pipe, rendering it a very efficient FIRE ENGINE, ready for use at any moment.

Circulars containing full information relative to size, prices, &c, may be obtained by addressing the

MESSRS. DODGE, Newburgh, N. Y;
Or, KELLOGG & DODGE,
Charleston, S. C.

v6-22

Reapers, Threshers, Horse Powers, Mowers.

S. L. PALMER & CO. have now on hand and on the way the following Machines, all of the best patents, with late improvements, which they offer at low rates:

Agricultural Business.

AN opportunity now offers to one or two persons who desire to enter into a very profitable business, and can furnish $5,000 each. The chance is a rare one, and the most satisfactory testimony can be given of its success.

None need communicate that cannot command the ready money for the immediate commencement of the enterprise.

The utmost confidence can be relied upon, and no person will be treated with but the principal. Letters, with real signature, addressed to "G. A. B." and left at, or mailed to the office of the CALIFORNIA FARMER, will receive prompt reply. v6-15

PACIFIC MUSEUM'

Corner of Clay and Kearny streets.

INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!

THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Wolf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montes.

☞ A full Brass Band is in attendance every evening. Open every day and evening (Sundays excepted).

*** Admission 25 cents. v7-2

[PREMIUM MANUFACTORY.]

Hudson's Golden California Mustard.

THE proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs., 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.

The proprietor also manufactures a very superior article of Salad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.

For any further information regarding this Mustard, we refer to the principal business houses in this city.

Purchases at wholesale or retail are specially invited to call at the office,

Agricultural Reviews and Essays—No. 2.

Science for Farmers.

Patent Office Report on Agriculture, 1855. *Article*—"Climatology. 9 Meteorology in its connection with Agriculture. By Joseph Henry, of the Smithsonian Institution."

The preparation of the Earth for the intellectual races. An address delivered by request before the California Legislature, in February, 1854, by C. F. Winslow, M. D." Reprinted by the California State Agricultural Society, in the Appendix of their Official Report, 1856

It is seldom that an abler document than the [illegible] of those named is brought before the public [illegible]ice. In fact, it contains so much science in [illegible]ry sentence, as to remind us more of the works [illegible] Liebig than of any other modern writer. It is truly scientific, that the reader is surprised at [illegible] many and varied subjects distinctly brought [illegible]ore his notice in so small a compass, and is [illegible]ost bewildered and stopefied with the brilliant [illegible]e of light which meets his eyes in every par[illegible]aph.

The talented writer commences by showing us [illegible]t even the statistics of crime may be made a [illegible]tter of calculation, and that an index of the [illegible]al and intellectual education of a people may [illegible]s be unmistakably afforded, and clearly estab[illegible]es the humiliating fact, that man, the free [illegible]nt, and the responsible creature of Almighty [illegible]wer, is after all but the creature of circum[illegible]nces.

He next proceeds with the subject more directly [illegible]posed, and points out the importance of Science [illegible] the perfection of Art; which he exemplifies [illegible] reference to the case of the Chinese, as one [illegible]oint; with whom invention depends more on [illegible]dent than a full apprehension of the laws of [illegible]ture, and is consequently tardy in its progress, [illegible] wasteful in its operation.

He then goes on to describe the physiology of [illegible]nts and the manner of their growth, and [illegible]ounces the brilliant truth, that "it is a prin[illegible]le of Nature that power is always absorbed in [illegible]ducing a change in matter." But this power [illegible]ot always lost. "This change may be perma[illegible]t, or it may be of such a character as to *repro[illegible]e the power which was expended in effecting* [illegible]. For example, the moving power, of a cannon [illegible] is permanently expended in passing into the [illegible] of a ship, but if the same ball were shot into [illegible]mouth of another cannon, and made to com[illegible]s a spring, the recoiling of the latter would [illegible]e to the ball in an opposite direction, precisely [illegible]same velocity which it had expended in com[illegible]ssing the spring, supposing nothing lost by [illegible]tion, &c. This example serves to illustrate [illegible]effect of the impulse from the sun. It decom[illegible]es the carbonic acid which surrounds the leaf [illegible]he plant; or, in other words, overcomes the [illegible]ural attraction between the carbon and the [illegible]gen of which the acid is composed; and in this [illegible]t the motions of the atoms of the etherial [illegible]ium are themselves stopped. The power, [illegible]ever, in this case is not permanently neutral[illegible], for when the plant is consumed, either by [illegible]d combustion, or by slow decay, that is, when [illegible]arbon and the oxygen are again suffered to [illegible]nto union to form carbonic acid—*the same [illegible]unt of power is evolved in the form of light, [illegible], or nervous force, which was absorbed in [illegible] original composition.* If the plant, more[illegible], is consumed in the animal, the same power [illegible]xpended in building up the organization, in [illegible]ducing locomotion, and the incessant action of [illegible]heart, and the other involuntary movements [illegible]ssary to the vital process. *Plants are there[illegible]e the recipients of the power of the sunbeam.*"

[illegible]et me endeavor to explain this a little. It is [illegible]he power of the solar rays that the carbonic [illegible]of the atmosphere is decomposed, for fur[illegible]ing carbon, that necessary constituent of [illegible], of which, water excepted, they are almost [illegible]rely composed. To do this, according to [illegible], a power equal to a moderate red heat is [illegible]ired. This does not mean that the weather [illegible]e red-hot; but that, by their fineness and [illegible] the solar rays exercise such a power. But [illegible]truth which our writer means to demonstrate [illegible]hat this power is not wasted, but only ab[illegible]ed in the plant, and that so much heat as was [illegible]ally used by the plant, the plant in its turn [illegible]pable of affording, and so of light, and of [illegible]y other quality afforded to it by the sun, for [illegible]growth and perfection.

[illegible]having established this great truth by legiti[illegible]e argument, the writer now proposes to turn [illegible]science to good account. "Properly to so direct this power of the sunbeam, that no portion of it may run to waste, or be unproductive of economical results, it is essential that we know something of its nature; and the lifetime of labor of many individuals, supported at the public expense, would be well expended in exclusive devotion to this one object. The researches which have been made in regard to it have developed the fact, that the impulses from the sun are of at least four different characters; namely, the lighting impulse, the heating impulse, the chemical impulse, and the phosphorogenic impulse."

In consequence of the discovery of Sir Isaac Newton, that the rays of light are not all of the same color, experiments have been made, and the truth satisfactorily established, that they are not all equally possessed of the same qualities. Among those who have been most successful in investigating this department of science, is our own accomplished Professor Draper. The subject, however, of how far the knowledge thus obtained may be made of practical utility to the farmer and gardener, has not yet been sufficiently investigated; but that it deserves investigation, it does not require much study to enable any one to perceive. It is well known that the highest point in the curve of the rainbow, and the hight of the sun, when that phenomenon is observable, are always equal, between them, to 60°. Consequently, the rainbow in summer can only be seen in the mornings and evenings. But in the spring, before the sun at noon-day reaches the hight of 60°, the rainbow is seen at any time during the day. Now, as the rainbow shows that the drops of falling rain posses the property of separating the rays of the sun, when they fall upon them at a certain angle, as certainly as an artificial prism of glass, if it should also appear that, when the sun of noon-day reaches a certain altitude, plants at the same temperature, and equally circumstanced in other respects, are differently affected from what they are at other seasons of the year—would we not be justified in concluding, that this difference is produced by the different power of the sun in separating the rays of light, under certain circumstances, at different seasons? The subject has hitherto been little investigated. But, as this writer truthfully remarks—"It will be evident that *the hopes of the future, in regard to Agriculture, principally rest upon the advance of abstract science*—not upon the mere accumulation of facts, of which the connection and dependence are unknown, *but upon a definite conception of the general principles of which these facts are the result.*" And well does this writer deserve credit for the lucid enunciation of facts involving scientific principles. "If," says he, as he proceeds with his subject, "a certain weight of air were carried from the surface of the earth, to such a hight that it would expand into double its volume, the heat which it contained would then be distributed throughout twice the space, and the temperature consequently be much diminished, though the absolute amount of heat would be unchanged. If the same air were returned to the earth, whence it was taken, condensation would ensue, and the temperature would be the same as at first. On this principle, a wind passing over a high mountain is not necessarily cooled; for the diminution of temperature, which is produced by the rarefaction of the ascent, would be just equivalent to the increase which is due to the condensation in an equal descent. This would be the case if the air were perfectly dry, but if it contained moisture, paradoxical as it may seem, it would be warmer when it returned to the lower level than when it left it. In ascending to the top of the mountain, it would deposit its moisture in the form of water or snow, and the latent heat given out from this would increase the heat of the air, and when it descended on the opposite side to the same level from which it ascended, it would be warmer on account of this additional heat."

The principle is correct; but the result would depend on other circumstances. A wind in summer, passing over a snow-clad mountain, would be colder when it reached its original level on the other side, not however from the operation of a different principle at that season, but because the warm air of the valley, when it reached the mountain-top, would not be carried up into the atmosphere, nor even be rarefied so much as the air at that elevated region would naturally be, but would be drawn with a rapidity in the ratio of its greater density, over the summit—just as the water in the shallow of a river runs as much more quickly than where it is deeper, as makes the same amount of water pass over the same distance in the same time—while the snow on the mountain-top being partially thawed by the warmer and denser current of air from below, the wind would partake to a certain extent of its temperature. Consequently, when it reached the other side of the mountain, it would necessarily be colder than it was before. Both these facts are familiar to those who reside in mountainous districts.

Our writer then goes on with equal talent, and strictly scientific reasoning, to investigate the effects of the proximity of water, of cultivation, the cutting down of forests, and the draining of marshes, on climate; and proves satisfactorily, that human industry guided by science may do more than many suppose, in making us much more comfortable than we now are. But it is unnecessary for me to follow him through the whole of his most excellet treatise, which, I have no doubt, those who are at the trouble to read this article will not fail to examine for themselves.

In placing Dr. Winslow alongside of this giant in science, I evidently introduce him in good society. But he, who has aspired

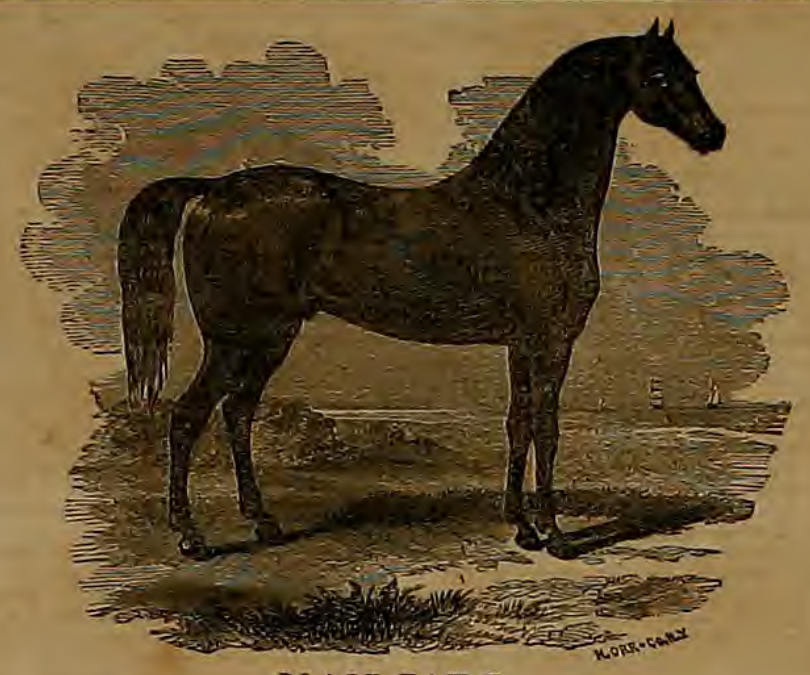
"The applause of listening senates to command,"

need not labor under any apprehension, especially as his address is a piece of finished oratory. I confess I have a sort of dread of world-makers, which may be a prejudice on my part, in consequence of being so provoked, when a boy, with the manner in which poor Moses Primrose, the vicar of Wakefield's son was taken in, in the matter of the "spectacles," by that arch rogue with the big book who talked so learnedly about the "cosmogony or creation of the World." But let the Doctor speak for himself. After introducing to the notice of his august auditory the subject in view, by proposing to "unbind, link by link, the golden chain which unites man with the earth, and earth with its Creator," he goes on to say, "I shall solicit your patient attention and kind indulgence for a short time, trusting that a *kind and confiding stroll, hand in hand, with the Infinite Creator*, may conduct us to brighter insights into his nature!"

It would be impossible for me to do justice to the subjects discussed in what the Doctor himself characterizes as "a discourse so philosophical, and extending over so wide a range." Let me however make one more quotation. "The humble origin of the slate-beds, and their extreme antiquity, are no less remarkable than the purpose which they have subserved, in the improvement and cultivation of the loftiest faculties of man. It is the first instrument placed in the hands of the young, in all enlightened communities of the world. It is by the agency of these rude slabs of ancient rock, that the human faculties have been cultivated and enlarged, until they are trained to weigh the earth as in a balance, to measure unimaginable distances into infinite space, and to calculate the positive existence of undiscovered worlds. *Here again, we trace an unmistakable connection between the mind of God and the destiny of man, and behold the wonderful fact, revealed in characters of living light, that through the instrumentality of the humblest vegetable growths, was appointed to spring the loftiest truths which adorn the pages of science and philosophy!*"

A friend of mine says that metallic slates are much better. That matter I leave to school boys to decide; and shall conclude this article by quoting the opinion of Professor Brande, who thinks very differently from Dr. Winslow, but who ought to know a great deal more about the materials and manufacture of the Earth than I do. "The first and leading object of Geology," says he, "is to become *practically* acquainted with the *present state* of the Earth's external surface, for excepting of its crust or rind we know nothing; and all that has been suggested, either by theory, or by experiment, relating to its internal composition, its density, and *the constitution of the entire mass*, is mere surmise and guess-work—deductions hastily drawn from superficial observation, or unwarranted inferences from imperfect researches."

AGRICOLA.



BLACK HAWK.

THE beautiful animal which figures in our journal this week, and from whose stock our country has received so great an acquisition, was foaled in 1833. We give his history from the new work "Morgan Horses," published by C. M. Saxton & Co., who kindly sent us a copy.

This horse was the property of Wingate Twombly, of Greenland (formerly of Durham), N. H.: sired by Sherman, g. sire, Justin Morgan. His dam was raised in New Brunswick, and is described as a half-blood English mare, a very fine animal, and a fast trotter. When four years old, Black Hawk was purchased by Benj. Thurston, of Lowell, Mass, for a family horse, and kept for that purpose until 1844, when he was purchased by David Hill, Esq., of Bridport, Vt., by whom he is now owned.

Ornament for Dried Flowers.

THE accompanying drawings, made by an accomplished lady, represent a pasteboard hanging vase, covered with moss, and attached to an oak branch, for a parlor ornament. From the material employed, it is better suited for dried flowers than those which require water.

The smaller basket represents the mode in which the pasteboard is united after being shaped, and the larger exhibits the same covered with moss. Every lady of the least taste can make these baskets, and ornament her boudoir, parlor, or sitting-room with her own handiwork, which she will enjoy more than expensive purchased objects.

The oak-leaves may be represented in winter in leather.

AN OREGON APPLE.—An apple of the "Gloria Mundi" variety was raised near Corvallis, on the Willamette, some 140 miles southeast of Portland, which weighed thirty-five ounces and a half, and measured seventeen inches and a hal in circumference. It is reported as from a tree *four years old.* We would just inform our Oregon friends that we *can* grow apples down this way. The prize apple at the late State Fair at San José, was of the same variety, measured seventeen inches also, weighed thirty-five ounces and a half, and, as we learn, grew on a tree *one year younger.* What says our Oregon friend to this?

BEAUTIES OF THE LAW'S DELAY.—About sixty years ago, when cotton was worth from 25 to 50 cents per pound, about 130 bales were imported into Liverpool from America. Owing to some dispute between the importer and the warehouse owner, the cotton was thrown "into Chancery," and there it has remained until a few days since, when it was sold by order of the court, realizing 8½ cents per pound.

California Post Offices.

EDITORS FARMER: There is no telling what number of letters miscarry, or are stolen, through neglect or crime in the Postmasters of this State.

The post offices are generally kept in *doggeries*, or other public places—and, when the mail arrives, it is opened publicly, and the letters, papers etc., are thrown into a box to which everybody has access. Is this as it should be? Are there not hundreds of times, when a man would like to get a peep at another's correspondence? And are there not *thousands* of men who would not scruple to take a letter out of the office, belonging to another, if they thought that it could never be known who did it, or that it was done at all? Letters put into the office, to be mailed, are also liable to be stolen, read and destroyed. Then, if a letter does not reach its destination, all that can be said about it is that it must have been misplaced by some careless Postmaster.

I have had letters stolen—and, upon one occasion, I saw enough to satisfy me that the one I put in was not *mailed;* I said nothing, but tried to get better proof. I found out that it had not got sixty miles in *one month.* This satisfied me, but, with all put together, it would not have satisfied a jury.

If I was on a jury I could not *convict* on such testimony, and it would be hard to get proof that would *convict.* All that I can see to remedy this evil, is for the Government to appoint *secret* agents to travel through the State, and see what Postmasters conduct the business in so loose a manner, and remove them from office. If I had thought that mine was the only case, I should have said nothing about it—but, I believe, it is a wide-spread evil, and should be remedied.

W. S. G.

P. S.—The above are my *true* initials; and if there is any Postmaster or person, in this State, who thinks that the shoe pinches *his* corns, and wants to know more, he can address me through the Editor of this paper, and I will be responsible for everything that I have said.

We have several facts to communicate upon post-office matters, but must defer till next week.—[ED.

EDUCATION OF THE AGRICULTURIST. — No man is so high as to be independent of the success of this great interest; no man is so low as not to be affected by its prosperity or decline. Agriculture feeds us; to a great degree it clothes us; without it we could not have manufactures, and we should not have commerce. These all stand together, but they stand together like pillars in a cluster, the largest in the middle, and that largest is Agriculture. We live in a country of small farms and freehold tenements; a country in which men cultivate with their own hands their own fee-simple acres, drawing not only their subsistence, but also their spirit of independence and manly freedom from the ground they plow. They are at once its owners, its cultivators, and its defenders. The cultivation of the earth is the most important labor of men. Man may be civilized in some degree, without great progress in manufactures, and with little commerce with his distant neighbors; but without cultivation of the earth, he is, in all countries, a savage.—[Daniel Webster.

NEGATIVE ARTESIAN WELLS.—The Society of Arts have published Herr Bruckmann's paper on "Negative Artesian Wells"—that is, wells which take in instead of giving out water. Such wells serve as permanent drains; they are sunk in loose strata, or where communications exist with fathomless fissures, or with deep-lying streams. Mr. Bruckmann, who is a native of Wurtemberg, states that they may be established "in all the so-called normal or sediment formations: diluvium, tertiary deposits, chalk, Jurassic rocks," and others. And he brings forward examples of the benefits that have followed the sinking of negative wells in towns or in swampy country districts. The drainage becomes at once perfect and constant; fluid matters of all kinds find their way to the mouth, and flow away, while solid matters may be stopped and used in fertilization.

WOOL.—The Ohio Farmer estimates the profits on sheep in that State, the last year, at six millions of dollars, and the whole capital invested sixty millions. The number of sheep, is probably, five millions, and the wool clipped last year, reached 10,196,000 pounds—and stated as being one-fifth of the entire wool crop of the Union.

TOBACCO.—This article has become one of the staple productions of the soil of the Chemung Valley, New York, and is said to be more profitable than any other. It is only about three years since it was introduced, and this year, it is stated, two or three hundred tuns have been raised in that county alone.

THE U. S. Branch Mint in the city of San Francisco, for the month of January, received 96,085-83 ounces in gold, and 332-80 ounces in silver. During the same period, $1,300,000 in double eagles, and $50,000 in quarter eagles, have been coined.

A WICKED THING.—The Washington correspondent of a Philadelphia paper states that some adventurous individuals have purchased of the proprietors of Mount Vernon all the trees and shrubbery left on the estate, at a cost of twenty thousand dollars, and that the same parties have erected a large building near the railroad depot in Washington, at a cost of probably $10,000 more. This large outlay is to be reimbursed by the manufacture and sale of Washington canes.

[From the Patent Office Report of 1855.]

Improvement of Land.

ON THE DRAINAGE OF HAARLEM LAKE, WITH SUGGESTIONS ON ITS APPLICABILITY TO OVERFLOWED LANDS IN THE UNITED STATES.

Thrift and plenty are the ideas we ever associate with the name of the Netherlands. Placed in a situation in which the exercise of industry, perseverance, prudence, and economy is essential to their very existence, the people of the "Low Countries" cheerfully obey the beneficent command to labor; and such are the fruits of their willingness to toil, that the rest of the world behold them with wonder and admiration.

From the middle of Belgium, a few miles north of Brussels, the country north-eastwardly becomes almost entirely a dead level, extending in monotonous sandy and peaty flats through Hanover, Jutland, Holstein, and, with little interruption, through Prussia into Russia. But the lowest part of this immense region, and that which has most recently emerged from the sea, is undoubtedly the country lying between the mouths of the Scheldt and the Ems; within this distance the Rhine, joined by the Meuse, Yssel, and other rivers, enters the sea, through a number of arms, and sluggish winding channels, which by no means represent the magnitude of their main streams as they appear higher up. The delta of the Rhine may be conceived to have been in early ages subject to perpetual changes of form, as new mud-banks were deposited, blocking up the old channels, and leading to the formation of new ones. Besides, it is obvious that the river, in forming a domain of alluvial deposits had to contend with the sea, which washed away the accumulations of mud, or covered them with sand, according to the vicissitudes of the seasons. The soil of the Netherlands shows everywhere the proofs of this struggle between the billows of the ocean and the river floods, in the alternation of salt and fresh water deposits. It also bears evidence to the fact, that these changes, effected by the inundations of the Rhine, or by encroachments of the sea, occurred frequently, long after the country had become inhabited. Remains of forests now lie buried under the waves of the German ocean; paved roads and traces of villages and of cultivation are found beneath the morasses on the banks of the Ems, and many similar proofs exist of great physical changes, respecting which history is silent.

For the purpose of securing the permanence of their territorial posessions, the early occupants of this country had recourse to dikes, or embankments, high and strong enough to protect them under ordinary circumstances from the tides; and, placing wind-mills on these dikes, exposed to the sea-breeze, they worked the pumps which drained the inclosed lands.

The Netherlands now present to our view an artificially constructed country, some portions of which are many feet below the surface of the sea, and nearly all too low for natural drainage. How this land has been rescued from the floods and waves, and how it is preserved from their attempted inroads, it is the purpose of this paper to explain.

The recovery of land from the water, in Holland, is the most important branch of engineering, insomuch that a Government Board has existed for centuries, the duties of which are confined to the administration of the hydraulic works of the kingdom. This Board is denominated the "Waterstaat," or Board of Marine Engineers; and in matters affecting the protection of the country from the waters of either the rivers or the sea, its powers are very great, if not absolute. A school of instruction in this particular branch has also long been maintained by the government.

"Polder" is a term applied in the Netherlands to a tract of country the surface of which is lower than the waters adjacent to it, and which, therefore, requires to be protected from them. Such tracts are abundant throughout the country here described, exceeding a thousand in Middle Holland alone. They are of various sizes, and of various degrees of depth, some of them indeed being twenty feet below the level of the sea.

These polders are formed in four different ways, namely, first, of ground reclaimed from the sea by the skill of the engineer; second, of ground protected from the rivers by circumscribing, and consequently diverting and deepening their currents; third, by the draining of lakes; fourth, by the digging of turf for fuel, in such quantities as to make extensive depressions of this character. In Rhineland, there is of Nature's formation of dry land (more than one-third of which is "downs," or formations caused by deposits of sand upon the margin of the sea), but 76,000 acres, while there is of polder land 173,000, and of land still redeemable as polder land, 56,000. But one-fourth of the land of Rhineland, therefore, is above the level of the sea; and a system of drainage adapted to its recovery and preservation, requires, not only the construction of sluices, ditches, canals and embankments, but a resort to extraordinary mechanical agencies in elevating the water above the surface of the contiguous rivers or seas, in order that it may flow into them. To illustrate the method which experience has proved to be the best for the accomplishment of this object, a single great and successful instance will here be reviewed.

Haarlem Lake, or *Haarlemmer Meer* (Pl. XI), was two miles south of the city of Haarlem, in the province of North Holland, a city that has been described as "very well built, very clean, and very dull," yet which is, to all who esteem intelligence, industry, moral worth and integrity, one of the most interesting cities of the world. This lake was formerly an inlet of the Zuyder Zee (a gulf of the German ocean), of an irregular, oblong form, thirty-three miles in circumference, and inclosing an area of about 40,000 acres. It communicated in the north with the river Y, and in the south with the Old Rhine. Its average depth was a little more than thirteen feet below the lowest tides in the Zuyder Zee. The recovery of the land for the purposes of agriculture was not the primary object leading to its reclamation, the danger of its extension and encroachment upon the soft alluvial soil of the surrounding country being constantly regard as imminent. Indeed, by the overflow of its banks during a hurricane, in November, 1836, the city of Amsterdam, four miles northeast of it, sustained considerable injury; and in the succeeding month, the storm coming from a different quarter, the city of Leyden, four and a half miles southwardly, experienced a like calamity. Thus admonished, the government determined upon the great undertaking it has since so successfully accomplished.

The attention of the people had been directed to this enterprise as early as the year 1617, and from that period to the year 1839, many projects were submitted to the government for the purpose. Allusion to any of these plans will not be here made, except so far as to do honor to an enterprising millwright whose success in reclaiming submerged lands obtained for him the appellation of "Leeghwater," which may be interpreted "Water-drainer." Such was the skill and sagacity of this person, that at that early period he proposed a plan that differed but little from that which was finally adopted, except that he contemplated a reliance upon windmills for the power necessary to elevate the water from the lake.

In 1839, after a series of careful investigations, and various modifications and amendments of the plans previously arranged, the commissioners, destined finally to superintend the work, proceeded to inclose the entire lake, including Spiering Meer, and Kager Meer, the whole comprising an area of 44,520 acres, which was to be drained to a mean depth of about 13½ feet, besides the accessions by leakage from the surrounding lands, and the fall of rain during the operation.

The first object to be accomplished was the construction of a dike and canal around the entire area, in order, first, to intercept the water from the adjoining lands on a higher level; second, to provide a navigation in lieu of that previously afforded by the lake; and third, to form a channel, for the flow of the water pumped from the lake into the sea. This canal is some 40 miles long; in its northern portion, it is 147½ feet wide, at the level of the tow-path, which is the level of the datum at Amsterdam; on the west and south, the width at this point is a little over 131 feet; and, on the east, it is a little over 124½ feet wide. Its depth throughout is 9 4-5 feet. The dike between the canal and the lake is 13½ feet on the crown.

The flow of water out of the canal was found not always to be depended upon; as, when the wind was strong and adverse, it was repelled to such a degree as to render further agencies necessary.

From an examination of Pl. XI., it will be seen that the passage of the water from the canal is provided for at three points: first, to the North Sea, or German Ocean, by the great out and sluices at Katwyk; second, by the sluices at Halfwege, or Halfway, between Amsterdam and Haarlem; third, by the Spaarne, through the sluices at Spaarndam, by both of which outlets the waters are discharged into the arm of the Zuyder Zee, called the Y. At the first-named of these places, the only remedy applied is an arrangement of gates which remain open when the flow of water is outward, but closed when the pressure of the tide is reversed. At the second, the resistance has not proved so frequent nor serious as to require the application of a remedy; but at Spaarndam, where the canal empties into the sea, a steam-engine and machinery adapted to raise a great quantity of water to a limited hight, of from a few inches to two and a half feet, have been provided, and are used whenever the wind blows strong from the north or northeast.

The commissioners were in the beginning empowered to borrow 8,000,000 florins, or $3,200,000, to provide for the defence of Amsterdam from inundation; to purchase all lands required; to divide the soil when drained; to supply the new polder with water in time of drought; and to arrange a system of canals, channels, or ditches, roads, and bridges.

The work was commenced by the construction of the dike and canal around the lake. This was not generally difficult, the excavations being through firm peaty soil, impervious to water, which was thrown up to form the body of the dike, a layer of turf being used to finish it off; but, in some situations, it was otherwise, as, for instance, on the narrow neck of land between the lake of Haarlem and the Turf-pit lakes near Aalsmeer, which is of a soft and spongy nature, the surface consisting chiefly of reeds and aquatic plants, and soft peat forming the substratum. This land rose and fell with the water in the lake. Ingenious, yet tedious, laborious and expensive means of overcoming these obstacles had therefore to be resorted to; such as the exposure of layer after layer of the peaty soil to the sun and wind, and sinking them gradually by the weight of additional layers, until the whole mass sank through the soft peat to the solid ground beneath, when some firmer soil from old dikes was added, and the proper form given to the embankments, by the removal of the superfluous portions. At other points, the bases of the embankments were protected by sheet-piling. In crossing canals and creeks, successive layers of fascine, or fagot-work, formed into oblong masses, were floated to their destined positions, and then loaded with sand or gravel until they sank, in layers, crossing each other at right angles. They were then secured in position by stakes driven through them. Over the wall thus formed, earth was thrown to form the slopes of the dike and canal.

Not only was it necessary to construct dikes between the canal and the lake, or polder, but between the canal and the Turf-pit lakes also. For this purpose, fascine, or wicker-work, was resorted to, upon the exterior of which was thrown sand, obtained at great expense. This, mingling with the soft soil, rendered it impervious to water.

So well did this work prosper, that, in 1843, it was regarded as nearly completed; but, in consequence of delays in obtaining the requisite steam-engines and pumps, the lake was not closed until May, 1848.

Pumping a very large quantity of water to an inconsiderable hight was a purpose to which no great engine had been previously adapted; and, as this hight was to be gradually increased, provision had to be made for varying the capacity and action of the machines. No extensive pumping apparatus in any part of the world was therefore suited for imitation; but recourse was wisely had to England for the light of experience in the matter, which resulted in the employment of Messrs. Joseph Gibbs and Arthur Dean, of that country, to furnish drawings and specifications, according to which three engines were constructed and applied to the work, one of them being completed and tested, however, before the others were commenced. This first was called the "Leeghwater," in honor of the worthy engineer already named. It was erected near Kaag, which is not far from Leyden. The "Cruquius" and the "Lynden," called after two personages distinguished in the promotion of the great enterprise, were erected, the former near Haarlem, and the latter near Amsterdam. The engine houses are massive circular towers, and the boiler houses square buildings attached to their sides. Preparatory to laying in the foundations of these structures, coffer-dams were thrown around their sites. The water having been pumped out, the areas were dug to a depth of about 23 feet below the mean surface of the lake. Piles were then driven to a depth of 40 feet below that level, and over them a strong platform was laid to receive the walls.

The peculiar engine placed at Spaarndam, to coerce the water from the canal to the sea, is of course additional to the three here spoken of. It is of 360 horse-power, and gives motion to ten water-wheels. Each of the other three engines named has been stated to be of 400 horse-power, and to have cost half a million of florins, or $200,000. During the thirty-nine months consumed in draining the lake, ending on the first of July, 1852, they worked nineteen months and a seventh, and raised 831,839,501 cubic meters of water, equal to about 219,771,996,000 wine gallons. The engines rested during that dry summer, and, in the following winter, the water accumulated upon the moist polder, which would not absorb it, to a considerable hight; but this was exhausted by June, 1853, when the sale of the recovered lands was commenced. In the following winter, however, accumulated waters again arose from rains and leakage; but the system of interior canals and ditches being then regarded as perfected, including a basin for the reception of the waters, the work appeared to be nearly completed in the summer of 1854; yet, although the winter had been very remarkable for its copious rains, it was to the general disappointment that the central and lower portion of the great polder was found to have accumulated much water in the winter of 1854–5. There were two causes for this apparent failure: first, the engine boilers were not supplied with filtered water in sufficient quantities, and the earthy deposits impaired their efficiency; and, secondly and chiefly, in the system of interior drainage adopted, too much dependence had been placed upon the efforts of the proprietor of each tract of 20 hectares, or nearly 49½ acres, in draining his own land. In many instances, this was deferred by these individuals; and, in the less favorable situations, the lands had not been taken up at all. The annual amount of rain, a depth of about 27 inches, which had fallen at that period, could neither sink into the earth nor flow from its surface; neither was the process of evaporation equal to its removal.

In the month of October, 1855, when the writer visited the scene, not only was the work of drainage found to be perfected, but what had been, so short a time before, the bed of a great lake, was then a region of exceedingly fertile land in a fine state of cultivation. (Pl. XII.) It was dry, comfortable and healthy, or the only indications of diseases from local causes appeared to have been among persons whose severe and exposed employments would in almost any locality produce similar effects. Numerous neat, quaint and conveniently constructed cottages were seen in various directions; a population of about two thousand dwelt within the polder; fields of verdure extended far and wide, enlivened by cattle, horses and sheep, grazing on the fruitful meadows; and everything the eye could look upon indicated the triumphant achievement of the vast and beneficent design, with the exception of some limited patches of soil, charged with vegetable acids and salts of iron, upon which vegetation would not then grow, but which may be restored through the agency of lime.

The cost of the works herein described, and all their accessories, including their preservation and repairs to the end of 1855, and interest on loans made for the general purpose, is stated to have been $3,592,537, but $250,537 more than the original estimate. The number of acres recovered being 44,520; the cost per acre was therefore $80.69.

The engines used in draining the lake will continue to be kept in working order, and will at some seasons be applied daily in expelling the accumulating waters; not that they will all be often required in service at the same time, but because such an emergency is possible; and, should it come but once in ten or twenty years, the motives of economy leading to the setting aside of any of the engines will be regretted. Thus an inconsiderable annual expense must be permanently sustained by the holders of the land in Haarlem Polder, in conjunction with the government.

It is believed that the particularity with which this subject has been treated will not be regretted by the intelligent reader. What can be achieved by patient industry, guided by enlightened judgment, is happily exemplified in this remarkable instance. A small kingdom with an overflowing population, has thus added to its area many thousands of acres of the richest soil, in the most desired position, providing homes for a numerous agricultural population, productions for the subsistence of many more, and adding to the wealth, strength and influence of the nation. The two provinces of Holland comprise 2,146 square miles, or 1,983,440 acres. The population of these provinces is 1,106,248. There is, therefore, one person to every acre and a quarter, and, at this ratio, the area of Haarlem lake, rendered cultivable and habitable, is adapted to the maintenance and occupancy of 35,616 people. But when it is remembered that there is of course much waste and inferior land taken into the great aggregate, and that this polder is all equal to the best land of the provinces, its capacity may be stated as equal to the support of 70,000 persons, or twice the number indicated by the general apportionment.

In the United States, land is fortunately to be had at very low prices, and the government has at present no need to resort to such measures as have been here described, either for protection of its domains from the inroads of the sea, or for the acquisition of territory; yet may the example of Holland still be profitable to agriculturists or capitalists in many sections of our country. Land in the far off West, at only $1 25 per acre, is sometimes, practically, almost as remote and inaccessible to citizens of the United States as to the good people of Amsterdam or Haarlem themselves; and rich alluvial soil, at the very margins of great navigable waters, and near the accustomed homes and markets of our people, is often as desirable to them as to the people of those countries. Immense regions of the most fertile soil ever trodden by man, lying adjacent to the Delta and current of the Mississippi river, through hundreds of miles of its course, as well as extensive salt-marshes along our sea board, require for their restoration nothing more than an imitation, upon a limited scale, of the works herein described. Polders of three miles square, near the levees of the Mississippi, surrounded by canals upon which their products might be conveyed to the river's edge, could be diked at a small cost compared with their subsequent value. It is indeed only in the prairies that land can be tilled without its previous recovery from swamps, or the subjugation of its forests. That the labor expended in the peformance of these tasks is greater, in proportion to the value of the lands obtained, than would be required to drain the submerged tracks alluded to, should not be too confidently assumed. That the work may be conducted upon a more limited scale, and consequently with less means, is certain; but capitalists are seldom timid in essaying the most formidable enterprises, when large profits are demonstrated by even the most complicated calculations.

Should an examination of this subject and a series of successful experiments induce their continued prosecution, great public benefits would doubtless also proceed from the narrowing, and consequently the deepening of the courses of rivers upon the margins of which such polders may be established, and from the removal of a great source of miasmatic infection proceeding from organic deposits upon these miry tracts, often so prolific of devastation and disease.

D. J. B.

The Chinese Sugar-Cane.

UNITED STATES PATENT OFFICE, Dec. 10, 1856.

SIR: This new plant seems to be destined to take an important position among our ecomical products. Its seeds were sent, some six years ago, from the north of China, by M. de Montigny, to the Geographical Society of Paris. From a cursory examination of a small field of it, growing at Verrières, in France, in the autumn of 1854, Mr. D. J. Browne, then on a mission from this office for collecting agricultural information and products, was led to infer, that, from the peculiarity of the climate in which it was growing, and its resemblance in appearance and habit to Indian corn, it would flourish in any region wherever that plant would thrive. From this source, he obtained some 200 pounds of the seed, which was distributed in small packages, by this Office, among the members of Congress, with the view of experimenting with it in all parts of the Union, and thereby ascertaining its adaptation to our soil and climate. In numerous instances, the results proved highly satisfactory, as it attained the hight of eight or ten feet, as far north as St. Pauls, in Minnesota, and matured its seeds at various points in Massachusetts, New York, Pennsylvania, Illinois, and other places further south. The following year, while in France on a similar mission as above, Mr. Browne obtained several bushels of the seed of this plant, grown from that reputed to have been brought from South Africa, by Mr. Leonard Wray, of London, and which has since proved to be identical with that obtained by this Office in 1854.

There appears to be a doubt among many in Europe, as well as in this country, as to the true botanical name of this plant. M. Louis Vilmorin, a scientific cultivator, of Paris, provisionally gave it the name of *Holcus saccharatus*, which had previously been applied to the common broom corn, if not to other species, or at least varieties, of some allied plant. He also conjectured that it might be the *Sorgum vulgare* (Andropogon sorghum of others), and thought that it might comprehend a variety of it, as well as *Andropogon cafra, bicolor*, etc., of Kunth. Mr. Wray, who has devoted much time and attention to the cultivation of this plant, with the view of extracting sugar from its juice, at Cape Natal and other places, states that, in the southeast part of Caffraria, there are at least fifteen varieties of it, some of them growing to a hight of twelve or fifteen feet, with stems as thick as those of the sugar-cane (*Saccharum officinarum*). M. Vilmorin, also, says that, in a collection of seeds sent to the Museum of Natural History at Paris, in 1840, by M. d'Abadie, there were thirty kinds of sorghum, among the growth of which he particularly recognized several plants having stems of a saccharine flavor. Others are of the opinion that the common broom-corn (*Holcus Sacchartus*), the chocolate or Guinea-corn (*Sorghum vulgare*), and the Chinese sugar-cane (*Sorghum saccharatum*), all of which, containing more or less saccharine matter, belong to the same species, but are variations caused by differences of soil and climate, or by a disposition to sport, after the manner of Indian corn and other plants under cultivation. The Chinese sugar-cane, however, differs from the others, in containing a far larger proportion of juice, and consequently is more valuable for fodder and other economical uses.

In 1766, a plant analogous to the one in question, was experimented upon at Florence, in Italy, by Pietro Arduino, for the extraction of sugar; yet it must have been of a different variety, as he describes its seeds as of a clear brown color, while those of the Chinese sugar-cane are of a shining jet-black, and in appearance identical with those of the Sorghum vulgare, of the old collections.

DESCRIPTION AND HABIT OF GROWTH.

The Chinese sugar-cane, when cultivated on ordinary land, in the United States, somewhat after the manner of broom corn, grows to a hight of from eight to sixteen feet, while in Europe it does not attain much more than half of this altitude. Its stems are straight and smooth, often covered with a white bloom, or down, having leaves somewhat flexuous, falling over and greatly resembling in appearance those of Indian corn, but more elegant in form. When cultivated in hills, containing eight or ten stalks each, it puts forth at its top a conical panicle of dense flowers, green at first, but changing into violet shades, and finally into dark purple, at maturity. In France and the central and northern sections of the United States, it has thus far proved an annual; but from observations made by M. Vilmorin, as well as some experiments made in our Southern States, it is conjectured that, from the vigor and fullness of the lower part of the stalks, in autumn, by protecting them during the winter, they would produce new plants the following spring. It stands drought far better than Indian corn, and will resist the effects of considerable frost without injury, after the panicles appear, but not in its younger and more tender state. If suffered to remain in the field after the seeds have ripened and have been removed, where the season is sufficiently warm and long, new panicles will shoot out at the topmost joints, one or more to each stalk, and mature a second crop of seeds. The average yield of seed to each panicle is at least a gill.

CULTIVATION.

Since its introduction into this country, the Chinese sugar-cane has proved itself well adapted to our geographical range of Indian corn. It is of easy cultivation, being similar to that of maize or broom-corn, but will prosper in a much poorer soil. It does not succeed so well, however, when sown broadcast with the view of producing fodder, as it will not grow to much more than half its usual hight. If the seeds are planted in May, in the Middle States, or still earlier at the South, two crops of fodder can be grown in a season, from the same roots—the first one in June or July, to be cut before the panicles appear, which would be green and succulent, like young Indian corn—and the other a month or two later, at the time, or before, the seed is fully matured. In the extreme Northern States, where the season is too short and cool for it to ripen in the open air, the cultivator will necessarily have to obtain his seed from regions further south. If it were important for him to raise his own seed, he could start the plants under glass, in the spring and remove them to the field or garden at about the period of planting Indian corn, after which they would fully mature. One quart of seeds are found to be sufficient for an acre. If the soil be indifferent or poor, they may be sown in rows or drills about three feet apart, with the plants from ten to twelve inches asunder; but if the soil be rich, they may be planted in hills, five or more seeds to each, four or five feet apart in one direction, and three or four in the other. The plants may be worked or hoed twice in the course of the season, in a similar manner to Indian corn. Any suckers or superfluous shoots, which may spring up, may be removed. The seed should not be harvested before it acquires a dark or black hue. Should the plants lodge, or fall to the ground, by the excessive weight of the heads, during storms of wind or rain, before the seed matures, they will remain for weeks without injury. In collecting the seed, a convenient method is to cut off the stalks about a foot below the panicles, tie them up in bunches of twenty-five, and suspend them in any secure, airy place, sheltered from rain. If intended solely for fodder, the first crop should be cut just before the panicles would appear, and the second, as soon as the seed arrives at the milky stage. It may be tied up in bundles, shocked and cured, like the tops or stalks of Indian corn. If not intended to be employed for any other economical use, after the seed has been removed, and the weather be cool, and the average temperature of the day does not exceed 45° or 50° F., the stalks may be cut up close to the ground, tied in bundles, collected into shocks, and stowed in a mass in a succulent state for fodder in sheds or barns, where they will keep without injury, if desired, until spring. In this condition, however, the lower parts of the stalks will be found to be quite hard and woody, and will require to be chopped into small pieces for feeding.

Precaution.—Particular care should be observed not to cultivate this plant in the vicinity of Dourah corn, Guinea corn, nor broom-corn, as it hybridizes or mixes freely with those plants, which would render the seeds of the product unfit for sowing. Yours, very respectfully,

CHARLES MASON, Commissioner.

We give a very interesting letter, which we find in the Carolina Cultivator, relative to the cultivation of the Chinese Sugar Cane, which is now attracting universal attention:

GROWING CHINESE SUGAR CANE.

Messrs. Editors: As the Chinese Sugar Cane is attracting the attention of the community, and as it is likely to be of great value to the farmers of the United States, and as you have given us an article on this subject in No. Vol. XI, of the Scientific American, I thought I would write down and send you the result of my own experience in the growth of this plant.

Some time during the last winter I obtained about three hundred seeds of the "Sorgho Sucre" from the Patent Office, which I planted on the first of May last, on land that had been cleared three years ago. I laid the field off in checks three feet apart for corn. In some of these hills I planted the seeds of this sugar cane, dropping eight seeds in a hill, making thirty-seven hills in all. I worked the cane precisely as I did the corn, giving it three plowings and three hoeings. In four months from the time the seed was planted the cane was fully matured. It then measured ten feet six inches high, and one inch and three-eights in diameter at the butt end. The joints average twelve in number to the cane, measuring from six to eleven inches long, the shortest at the bottom and the longest at the top. As soon as the seed was ripe, another head of seed put up out of the second joint from the top, and in a short time grew as high as the original head, although not quite so large. By the time the seed of this head began to turn dark a third head sprang up from the third joint, which was about the size of the last head, and now a fourth head is making its appearance from the fourth joint. Where this shooting forth of new heads will end, if no frost should come to kill it, I cannot tell. The roots, where I cut off some of the canes some time ago, are sending up new sprouts, some of which are four inches high. I am of the opinion the Sorgho Sucre is a perennial plant, and would grow all the time if there were no severe cold to kill it. It appears to surpass anything we can plant in producing food for cattle. There are commonly twelve leaves to a cane, and these measure, on an average, three feet long, and three inches and a half broad. We commonly plant two stalks of corn on a hill. I had eight canes in the same space, each one producing full as much food as one stalk of corn. At this rate, which is to me matter of fact, one acre of cane will produce as much fodder as four acres of corn. But I am persuaded that I might have planted the cane in drills of three feet apart, dropping eight seeds in every space of eighteen inches, and by this means have eight times as much fodder as corn would produce.

One head of seed that I picked up at a random measured three gills, and one gill contained eight hundred seeds. I then selected a large head, and measured it, and found it to contain four and a half gills of seed. The thirty-seven hills that I planted produced three pecks of seeds, this, after drying it two days in the sun, weighed thirty-two pounds. I had no mill to squeeze the cane, in order to make experiments in sirup and sugar. I made a little roller, which I thought might press out some of the sap, but it was a failure, for want of sufficient power. It flattened the cane, but did not press out the sap, of which the cane appeared to be full. I twisted a joint in my hands after being flattened by the roller, and obtained about half a gill of sap, which was as sweet as any of the sap of the sugar cane of the south. I intend, Providence permitting, to plant at least half an acre next spring, and procure a proper mill and boiler, and make a thorough experiment.

Jos. McKee.

Juno, Lumpkin Co., Ga., Sept. 1856.

LET HENS SIT WHERE THEY CHOOSE.—I have long been a keeper of poultry, and an observer of their habits; and I have arrived at the conclusion, that hens are most prolific when left to their natural instinct, as I think the following interesting circumstance will prove: One of my hens (a pullet of a late brood last year) formed herself a nest among the ivy on the top of a wall nine feet high, and from sixteen eggs brought out fourteen strong, healthy chickens of every color, though the hen is a cross between the Gold-Pencilled Hamburg and the Gray Dorking. During the time of sitting, she was several times exposed to violent storms, and the wall faces the high road with constant traffic.—[Wistaria.

AN ANCIENT OAK.—One of the oldest trees in Europe was struck by lightning in the month of July last. This tree, an oak, had been planted near Chatillion-sur Seine (Cote d'Or), in 1417, by a Count of Champagne. The oak, which therefore existed 786 years, measured seven and a-half metres in circumference, and had produced acorns up to 1830.

Bulbous Roots.

CULTIVATION OF THE HYACINTH.

We desire to call attention to this beautiful
ulb, the sweetest and one of the most fragrant
f the bulb tribes, which can be easily cultivated
the parlor or in the garden. We are pleased
ith the notice of this bulb, and the directions
r its growing, which we find in the Horticultur-
, which remarks we with pleasure copy, and
ope they may induce many to purchase and cul-
vate this beautiful bulb; and not only this, but
any others of the fragrant and showy tribe,
ch as the Tuberosa, Jonquila, Tulip, Lilly,
yrrites, &c.

These all can now be found at the seed stores
our cities. We noticed a fine collection at S.
. Moore's seed store, on California street, San
rancisco, to whom we were indebted for a few
lendid bulbs. We examined minutely the
rious bulbs, and other new plants and seeds
ich our interest induced us to examine, and
are most happy to notice this house is import-
to benefit the State. We return thanks for
bulbs, and we will hand them to one who can
preciate them, and grow them, and enjoy their
grance. We hope the citizens of San Fran-
co will visit Mr. Moore's seed store, and secure
bulbs and other valuable articles recently re-
ved.

We learn that our fellow citizen of Sacramento,
. Ray, has also imported a few collections of
bs to add to his collections of seeds, trees and
nts, which he offers to his friends at his store
J street.

There is hardly a flower in cultivation so gen-
lly a favorite as the hyacinth, and certainly
one which so gratefully repays the attention
towed upon it. There is not a medium capa-
of retaining moisture but it will grow in, and
ill give us as good a bloom when planted in
sand as it will in the richest compost. Many
ple ought to be thankful for this spring visitor,
those whose delicate hands put the finish to
beautiful stands which grace the drawing
m, to the salamander-like men who, in a heat
would broil a steak, blow the thousands of
ses employed to grow them in water. There
ot a smoky hole in the most confined manu-
uring town in which the hyacinth will not
m, if allowed moisture of some kind in which
engthen its silvery roots. If we calculated
he means required for its growth, instead of
price of a root, it might truly be called the
man's flower. There is scarcely an indi-
al who is permitted to live in daylight, but
indulge himself with two or three, if he be
of flowers, and they will afford gratification
the bloom is over. Let everybody who can
three flower pots, or three hyacinth glasses,
a bulb of each color, and they will have
ers—ay, if they grow them in a smoky attic,
still more smoky kitchen.

Practical Hints for Amateurs.

BY THE LATE A. J. DOWNING.

ou may plant peas, for the earliest crop, as
as the frost is out of the ground, and it is
o dig. Choose a warm, sheltered spot, and
rotten stable manure and ashes in preparing
soil, before sowing the seed. Peas don't
d a hard frost, even when on rich or too high
nd; and therefore the earlier you plant, the
er you pick. If you have to plant in the
garden, you may hasten your crop by sow-
the drills east and west, and setting a board
he ground edgeways, on the north side, to
ter each row. "Prince Albert" is one of the
early sorts.

hubarb is an invaluable plant to those who
a spring tart. You may have yours ready
t a week before your neighbor's, without the
le of forcing, if you set your plants in a bor-
on the south side of a wall or tight fence
take the precaution to loosen up the soil,
cover each crown of roots with a bushel
et full of black peat earth the autumn before.
me men are marvelously fond of *pruning*,
go about cutting a limb here, and a branch
, without "rhyme or reason." Don't prune
standard trees, unless the branches are so
tural as to crowd each other; and even then,
should be thinned out as little as possible to
er the purpose. Or, in the other case, where
ree has got into a stunted and feeble state,
a shortening-back the terminal shoots,
with a good dressing of manure, will make
sh out strong, healthily shoots again.

you wish to get early crops in your kitchen
en, make some boxes two feet square, and a
high. Knock them together out of any rough
ds; and if you cannot afford to glaze the
top (and, to say the truth, it is a waste of
), put a single light in—a 7-by-9. If you
a hill of early cucumbers, melons, or toma-
dig out a hole of the size of the box, and two
-half feet deep, fill it with fresh stable man-
mixed with litter, tread the manure down
till there is room for six or eight inches of
light soil. On the latter plant your seeds.
will soon start, with the slight warmth of
anure, and the box will protect them at
and during cold and stormy days, till the
is settled. Every mid day you will, of
, raise it up on one side an inch or two, for
air; and in positively warm days, remove
a few hours altogether. In this way, you
et a crop, at small cost, a long start in ad-
of the unsheltered growth along side, and
none of the bother and vexation of *trans-*
ing from hotbeds. The boxes cost very
if you make them yourself; and if laid away
o as there is no further need for them, they
st a dozen years or more.

hen you are planting a tree or shrub, don't
ny-wise and pound-foolish; in other words,
ious to have it look large, as to be unwill-
cut off a single inch of its top to balance
s of roots. Remember that if your tree
grow six inches if left "unshortened," it
grow twelve if properly shortened, besides
far healthier shoots and bigger leaves, to
thing of its being five times as likely *not*

ou are about to turn "orchardist," never
large quantity of trees of any nurseryman,
strength of his own "extensive advertise-
." It is easy to say fine things in print;
"immense specimen grounds," "50,000
refully propagated under the direction of
oprietor," &c., &c. Go and see for your-
and very likely the "immense specimen
" may turn out to be a dozen old trees in
plat, and the nursery a wilderness of con-
. Never, in short, buy a large quantity of
trees of any man who is a stranger to you,
t inquiring first all about his accuracy,
stomers who have dealt with him and
his sorts. Such people, who have tasted his quality, are not very likely to tell "long yarns," though advertisements sometimes will.

The neatest and most perfect mode of grafting, is *splice grafting*. (See Downing's Fruits, p. 15.) It can only be done when your stock and scion correspond pretty nearly in size; but the *amalgamation* is done in short-hand. Tie the wound over neatly with a stand of matting or coarse woolen yarn, and smear the whole over with thick "shellac paint," and not one in a hundred will fail.

No large fruit tree is so readily "reformed" as a pear. Many a tree, of twenty or thirty feet high, that stands, at this moment, within ten rods of your door, and bears nothing but fruit that you would be ashamed to offer at a country fair, may be made to bear *bushels* of Bartletts, or something as good, in three years' time, by the expenditure of a couple of hours, in cutting back and grafting all the principal limbs as soon as the sap is fairly in motion. "Cleft grafting" is the readiest sort for this sort of subject; and a little practice will enable any one to perform it very quickly.

If you want to be successful in transplanting, don't be afraid of working in dull weather. If you are shy of a "Scotch mist," buy an India-rubber macintosh. Nothing is so cruel, to many sorts of trees, as to let their tender fibres parch up in a dry wind, or a bright sun. Such weather may be fun to you, but 'tis death them.

Dress your lawns with a mixture of guano and ashes; one bushel of the former to four bushels of the latter. The earlier in the spring it can be put on the better, so that the rains may carry the soluble parts to the roots. A light coat of this, spread broad-cast, is much better for grass than any other manure.

The best top-dressing for a strawberry bed is *burnt sods*. Pile up the brush and rubbish you have at hand in layers with the sods, and set fire to the heap; let it smoulder away for several days, till the wood is pretty well burnt out, and the sods well roasted. Then overhaul the heap, chop and beat it up with the spade, and, after loosening up the soil in the bed, give them a coat an inch or two in thickness. It will give new life to the plants, and set them in a way to give you an uncommonly fine crop.

Dr. Livingstone's Discoveries.

THE secret of Africa has ceased to be. That mysterious quarter of the globe, last in civilization—for in the geography of human advancement, as well as in physical geography, Egypt has always been a part of Asia—fortified against foreigners by its compact form, its fatal fevers, the fabulous savagery of its inhabitants, and more than all, the uncertain terror which is everywhere projected like a shadow from the unknown, has within a few years past, lost a great part of its Know Nothing character. The sources of the Nile have been almost reached. The countries to the south of Sahara have been crossed and recrossed by white men. Steam has vexed a thousand miles of the waters of the Niger, and Tribunes have been regularly sent to within three or four hundred miles of the geographical center of the country. North of the Cape of Good Hope Lake Ngami has recently added something to our knowledge, and its discoverer, Dr. Livingstone, is now astonishing the lovers of heroic perseverance and perfect maps, by his details of a walk of 2,000 miles from St. Paul de Loando on the Atlantic, to Quillimane on the Indian Ocean.

Dr. Livingstone is nearly forty years old. His face is furrowed by hardships and thirty fevers, and black with exposure to a burning sun. His left arm is crushed and nearly helpless from the too cordial embrace of an African Lion, and sixteen years among savages have given him an African accent and great hesitancy in speaking English. Passing through all privations with the heart of a true hero, not as sacrifices but as victories, he reached St. Paul de Loando, in May, 1854, after a foot journey of a thousand miles from his mission among the Bechuanas. He remained at St. Loando until the close of the year, when he set out for the unknown East. In March he arrived at Quillimane, where he was taken up by a British man-of-war. On the way he traced the Leeambye down to the Zambeze, thus demonstrating the existence in the center of this unknown land of a river some two thousand miles long.

This immense stream, whose discovery is the great fruit of the journey, is in itself an enigma without parallel. But a small portion of its waters reach the sea-coast. Like the Abyssinian Nile, it falls through a basaltic clift, near the middle of its course, which reduces its breadth from 1,000 to 20 yards. Above these falls it spreads out periodically into a great sea, filling hundreds of lateral channels; below it is a tranquil stream of a totally different character. Its mouths seem to be closing. The southernmost was navigable when the Portuguese first arrived in the country, 300 years ago, but it has long since ceased to be practicable. The Quillimane mouth has of late years been impassable, even for a canoe, from July to February, and for 200 or 300 miles up the river navigation is never attempted in the dry season. And in this very month of July, when the lower portion of the river, after its April freshets, has shrunk to a mere driblet, above the falls the river spreads out like a sea over hundreds of square miles. This, with frequent cataracts, and the hostility of the natives, would seem to be an effectual bar to the high hopes of fat trade and filibustering in which English merchants and journals are now indulging.

During this unprecedented march, alone and among savages, to whom a white face was a miracle, Dr. Livingstone was compelled to struggle through indescribable hardships. The hostility of the natives he conquered by his intimate knowledge of their character and the Bechuana tongue to which theirs is related. He waded rivers and slept in the sponge and ooze of marshes, being often so drenched as to be compelled to turn his armpit into a watch pocket. His cattle were destroyed by the terrible tse-tse fly, and he was too poor to purchase a canoe. Lions were numerous, being worsniped by many of the tribes as the receptacles of the departed souls of their chiefs; dangerous, too, as his crushed arm testifies. However, he thinks the fear of African wild beasts greater in England than in Africa. Many of his documents were lost while crossing a river in which he came near losing his life also, but he has memoranda of the latitudes and longitudes of multitude of cities, towns, rivers and mountains, which will go far to fill up the "unknown region" in our atlases.

Toward the interior he found the country more fertile and more populous. The natives worshiped idols, believed in transmigrated existence after death, and performed religious ceremonies in groves and woods. They were less ferocious and suspicious than the sea-board tribes, had a tradition of the deluge and more settled Governments. Some of them practiced inoculation, and used quinine, and all were eager for trade, being entirely dependent on English calico for clothing, a small piece of which would purchase a slave. Their language was sweet and expressive. Although their women, on the whole, were not well treated, a man having as many wives as he chose, they were complete mistresses of their own houses and gardens, which the husband dared not enter in his wife's absence. They were fond of show and glitter, and as much as $150 had been given for an English rifle. On the arid plateau of the interior water-melons supplied the place of water for some months of the year, as they do on the Plains of Hungary in Summer. A Quaker tribe on the river Zanga, never fight, never have consumption, scrofula, hydrophobia, cholera, small-pox or measles. These advantages, however, are counterbalanced by the necessity of assiduous devotion to trade and raising children to make good their loss from the frequent inroads of their fighting neighbors.

Dr. Livingstone's discoveries, in their character and their commercial value, have been declared by Sir Roderic Murchison to be superior to any since the discovery of the Cape of Good Hope by Vasco de Gama. But greater than any commercial value is the lesson which they teach—that all obstacles yield to a resolute man.

[N. Y. Tribune.

GOD'S WORLD IS WORTHY BETTER MEN.

BY GERALD MASSEY.

Behold! an idle tale they tell,
And who shall blame their telling it?
The rogues have got their cant to sell,
The world pays well for selling it;
They say the world's a desert drear,
Still plagued with Egypt's blindness;
That we were sent to suffer here;
What! by a God of kindness?
That, since the world has gone astray,
It must be so forever;
And we should stand still and obey
Its desolators. Never!
We'll labor for the better time,
With all our might of Press and Pen;
Believe me—'tis a truth sublime—
God's world is worthy better men.

With Paradise the world began;
A world of love and sadness;
Its beauty may be marred by man,
With all his crime and madness:
Yet, 'tis a brave work still. Love brings
A sunshine for the dreary,
With all our strife, sweet rest hath wings
To fold o'er hearts a-weary.
The sun in glory, like a god,
To-day climbs up heaven's bosom;
The flowers upon the jewel'd sod
In sweet love-lessons blossom;
As radiant of immortal youth
And beauty as in Eden. Then
Before me—'tis a noble truth:
God's world is worthy better men.

O, they are bold—knaves are bold—
Who say we are doomed to anguish,
That men in God's own image soul'd
Like hell-hound slaves must languish.
Probe Nature's heart to its red core,
There's more of good than evil;
And man—down-trampled man—is more
An angel than a devil.
Prepare to die! *Prepare to live!*
We know not what is living;
And let us for the world's good give,
As God is ever giving.
Give Action, Thought, Love, Wealth and Time,
To win the primal age again,
Believe me—'tis a truth sublime—
God's world is worthy better men.

HOME.

THERE is a land, of every land the pride,
Beloved by Heaven o'er all the world beside;
Where brighter suns dispense serener light,
And milder moons emparadise the night;
A land of beauty, virtue, valor, truth,
Time-tutored age, and love exalted youth;
The wandering mariner whose eye explores
The wealthiest isles and most enchanted shores,
Views not a realm so beautiful and fair,
Nor breathes the spirit of a purer air;
In every clime the magnet of his soul,
Touched by remembrance, trembles to that pole;
For in this land of Heaven's peculiar grace,
The heritage of nature's noblest race,
There is a spot of earth supremely blest,
A dearer, sweeter spot than all the rest,
Where man, creation's tyrant, casts aside,
His sword and sceptre, pageantry and pride,
While in his softened looks benignly blend
The sire, the son, husband, brother, friend;
Here woman reigns, the mother, daughter, wife,
Strew with fresh flowers, the narrow way of life!
In the clear heaven of her delightful eye,
An angel-guard of love and graces lie;
Around her knees domestic duties meet,
And fire-side pleasures gambol at her feet.
Where shall that land, that spot of earth be found?
Art thou a man?—a patriot—look around:
O, thou shalt find, howe'er thy footsteps roam,
That land *thy* country, and that spot *thy* home!

BENJAMIN FRANKLIN IN HIS GIG.—It is now but a century since Benjamin Franklin, Postmaster-General of the American colonies, by appointment of the crown, set out in his gig to make an official inspection of the principal routes. It is about eighty years since he held the same office under the authority of Congress, when a small folio (now preserved in the department at Washington), containing but three quires of paper, lasted as his account book for two years. These simple facts bring before us, more forcibly than an elaborate description, the vast increase in post-office facilities within a hundred years. For, if a postmaster-general were to pass all over the routes at present existing, it would require six years of incessant railroad travel, at the rate of 120 miles daily, while if he were to undertake the job in a gig, it would require a lifetime for its performance. Instead of a small folio, with its three quires of paper, the post-office accounts consume, every two years, 3,000 of the largest sized ledgers, keeping not less than one hundred clerks constantly employed in recording transactions with 30,000 contractors and other persons.

COURTESY.—No man is a gentleman who, without provocation, would treat with incivility the humblest of his species. It is a vulgarity, for which no accomplishments, and no attainments nor dress, can ever atone. Show me the man who desires to make every one happy around him; and whose greatest solicitude is never to give just offence to any one, and I will show you a gentleman by nature and practice, although he may never have worn a suit of broadcloth, nor heard of a lexicon.

BOOKS, &c.

Important Standard Publications
PUBLISHED BY
D. APPLETON & CO.,
346 and 348 Broadway, New York.

APPLETONS' CYCLOPEDIA OF BIOGRAPHY, FOREIGN AND AMERICAN. Edited by the Rev. Dr. Hawks. 1 vol., royal 8vo. Illustrated with 600 Engravings. Cloth, $5; do., half-morocco, $6.

JOHNSON'S CHEMISTRY OF COMMON LIFE. Illustrated with numerous Wood-cuts. 2 vols., 12mo., $2.

MACAULAY'S ESSAYS, Critical and Miscellaneous. Best edition. 5 vols., small 8vo., cloth, $3 75.

MILLEDULCIA; a Thousand Pleasant Things. Selected from Notes and Queries. Cloth, $1 50.

PERRY'S NARRATIVE OF AN EXPEDITION OF AN AMERICAN SQUADRON TO THE CHINA SEAS AND JAPAN, performed in the Years, 1852, 1853 and 1854. 1 vol., 8vo. With 200 Illustrations, $5.

SPECTATOR, The, a New Edition, carefully revised. 6 large vols., 8vo. Cloth, $9.

THIERS' FRENCH REVOLUTION. 4 vols., 8vo. Cloth, $5. v7-21m

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages. Two Dollars per annum. "Without question the best Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."

THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.

THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.

SPECIMEN NUMBERS

Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to
LUTHER TUCKER & SON, Albany, N. Y.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by
J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6 24 tf 15 John street, New York City.

CHINESE SUGAR CANE,
OR,
SORGHO SUCRE.
PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 30 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,
W. P. ORME, Atlanta, Georgia.

Catalogues, with prices annexed, will be furnished on application.

All orders, accompanied by remittances, will receive prompt attention.
Please address
R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco;
Or, JASON L. SANFORD, Agent, Brooklyn.

P. S.—We expect to receive in December from 50,000 to 70,000 Trees, Shrubs, Plants and Bulbous Roots, from the East, on the arrival of which a supplementary catalogue will be issued. v6-12 3m

The California Farmer.

SAN FRANCISCO, FRIDAY, FEBRUARY 6, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

McCombe & Co.'s American Express.—Our friends at San Mateo, Redwood City, Woodside, Santa Clara and San Jose, or any other place on the route of this Express Company, can forward to us through them, as they are agents for us.

Letters for the Farmer.—Our correspondents can now address us either at San Francisco or Sacramento, as shall be most convenient for them. Letters, &c., addressed to us at either place will be promptly attended to. Our exchanges will please forward their favors to us at San Francisco, and publishers who are in correspondence with us will hereafter please forward their works for review to San Francisco.

Beet Sugar.

Recently, the journals of San Francisco have been much engaged in a controversy upon the subject of Beet Sugar. Several interesting items have been laid before the readers of the Bulletin, Alta and the Herald, and we believe the Chronicle has also taken part in the debate. This is well: it is a good sign, and we note with much pleasure the great interest the press is taking in the cause of Agriculture generally, and in woolgrowing and sugar making particularly. When this great interest of Agriculture becomes so prominent, as it will be perceived it now has, the press *feel* its influence, and must awake to its vast importance, and we certainly rejoice to note how readily they take hold of the topics that now form an epoch in the development of the true wealth of California.

One journal is indeed enthusiastic upon the prospect of California becoming the producer of her own sugar, and would be willing to crown the gentleman who is now using every laudable means to introduce the manufacture of sugar from the Beet; and the same journal, and others, after giving the history of some distinguished manufacturer of France, whose capital used amounts to nearly three millions annually, proceed to say that to manufacture the sugar successfully it would require one or two hundred thousand dollars; but it is necessary to begin small—say fifty thousand dollars; because there is no information relating to the success in growing the Beet, or the quantity that can be raised on the acre, and that we must therefore wait until the people see that it will be profitable to raise the Sugar Beet.

Another journal comes out upon the subject, and *warns the people* to beware of this new enterprise, lest it should prove a disastrous speculation, like the *Morus Multicaulis*, and gives as a reason that there is no instance of sugar being made from the Beet, south of the forty-fifth degree of north latitude. Sugar, will more successfully or the Chinese . Just as well might the compete against them. ainst any manufacture same argument be used a vond the same latitude that was never introduced be ce to our more While we yield due defer chair, and experienced brethren of the editorial ion, we while we are glad to note this discus gh must be permitted to express an opinion, altho it may differ widely from all that has been written, and this opinion, we know they will cheerfully admit is offered with the same motives that prompted them to act—the general good; though we may take different ways of attaining it.

In the first place, we believe the honor of making the first sugar in California justly belongs to a Mr. Rose, and his friend, who made and exhibited their pounds Beet Sugar, at the late State Fair at San José, and to whom was awarded a special premium for the same, and the diploma of the State is now the evidence of this new manufacture, and the person to whom belongs the honor of the first attempt to introduce it. We say this much as an act of justice to Mr. Rose, for we saw the first sugar in the process of manufacture; and it was not in a two-hundred-thousand-dollar manufactory, but on the top of a house on Kearny street, and the cauldron was a common stew pot; the Beets were raised by the manufacturer, seed planted in July, and the *Sugar exhibited in October*—and this is the beginning of the sugar manufacturing in California, which shall, within ten years, count in millions of dollars annually.

And now a few words relative to the capability of our climate to produce the Beet in sufficient quantities and of a character to make good sugar, and make it profitable. In opinions expressed by us at former times, in our journal, we have always asserted that success would attend this manufacture in California, and we not only believe, but know, that it can be produced there cheaper than by any other process of bringing sugar to California.

It may not be generally known, yet such is the fact, that large quantities of Beet Sugar are annually imported into our State from France and Germany, and used in making sirups and confectionery and other ways, besides family use generally. Any one desirous of seeing Beet Sugar, can easily see a very superior quality at the famous Sirup Manufactory of Turner, Brothers, on Market street, who being the largest manufacturers of Ginger Wine, Syrups and Cordials, are consequently large importers of sugar, and they would become consumers of California Beet Sugar very promptly.

But to the capacity of our climate and soil, in raising the Sugar Beet—in November last, we stated, in remarks upon this subject, that no country could compete with us in raising the Beet, and asserted that fifty tons per acre could be raised; this was esteemed too high an estimate by those who know nothing of the capacity of our soil to produce. We now offer the following, as reliable facts: Many cultivators have already raised more than the rate of fifty tons, and that too without effort, and we need only give one fact to prove it. Dr. J. C. Cobb of San José, the Treasurer of the State Agricultural Society, raised in 1855 upon one-eighth of an acre, seven tons of Sugar Beet, and they were not thickly grown, either—and the Beets weighed thirty, forty and fifty pounds each; the last year, '56, he planted one-third of an acre, and sold the crop standing for $125, leaving a certain portion to himself for seed—the amount taken off was *seventeen tons*, and two more remained for seed; and these Beets weighed from thirty to sixty pounds each; a Beet of twenty-five pounds was considered small—and this crop was returned without effort. We have seen other crops, of enormous amounts; Messrs. Guild & Brown of San José, who produced the large Beet of one hundred and three pounds, had also a very large crop and of the largest sized Beets, and this too upon land called 'alkalic soil.' We examined the land, and saw the surface white with this property, yet the Beet seemed to grow better here than anywhere else.

As to the properties of the Beet for sugar as grown in California, we have no doubt of the richness of this vegetable, or that it contains as much saccharine matter as any ever produced in France; therefore we have facts enough to prove we can not only raise the Beet, but in such quantities per acre as to make its cost only about one-quarter or one-third that of France.

There is one fact certain, relative to the culture of the Sugar Beet—there is no root crop that will pay as well for food for stock, and we are astonished that farmers do not grow it more abundantly. The average price has been $10 per ton; but at $5 it would yield $250 per acre, and at small cost of raising. We have not the least shadow of doubt, but that land deeply and finely plowed would produce seventy-five tons per acre, and we really hope some person who understands the cultivation of root crops will make a careful experiment upon this Beet the coming year.

We shall present more facts the coming week, and shall be glad to offer our columns to any or all who feel an interest in this subject.

California Grapes.

The following letter addressed to M. Keller, Esq., of Los Angeles, from the celebrated wine maker of Cincinnati, Ohio, will be read with interest by all who are interested in the vine. This letter was published in the Los Angeles and several other journals, and we hope our vine growers will carefully note Mr. Longworth's remarks. This letter of Mr. L.'s is in reply to a letter from Mr. Keller, who sent grapes to Mr. L. for his opinion and trial:

Cincinnati, Ohio, Nov. 21, 1856.

Dear Sir: Your letter was received about five days since; and the box of grapes two days since, in fine order. The bunches were very large, and the grapes very sweet. I have sent one bunch for exhibition at our horticultural society to-morrow, and two others to our leading restaurants. The seed will be distributed, though I have not much hope of its bearing our climate, or bearing well in the open air. I have never seen but one European grape that does. Is yours a native of your region? Have you ever seen it in its wild state? My champagne manufacturer tells me it exactly like theirs.

You must have paid a heavy charge. If they n sent by steamer to New York, care of ottreal & Co., they would have cost had be I had grafts sent me by a private Messrs. York, from San Francisco, and only a trifle. antile house from whom our person to New and they came in a box of there left at a mer small, sealed tin box. merchants buy goods, were as fresh as when theirs. They were in half or three quarters. They came early in April, in my grape put in, and a few eyes grown five feet, and ters of an inch. I grafted the said to be house; they have grown twenty- c. The will bear next spring. The bunch is the size of a half bushel, and fruit wi re report leaves a large lee way.

I this day send you a pamphlet on grape cult and wine, which will inform you of all we know here. When you read the strawberry articles, inform me if you are advised in your region of the sexual character of the plants. The botanists of Europe are not. What does your largest strawberry measure in circumference? If you wish, I can send you some fine new seedlings, raised from seed of mine, and one, the Prolific, the only hermaphrodite ever cultivated, that bears a full crop of large perfect fruit.

Last winter was the coldest ever known here, and in many vineyards the vines were killed to the ground. I must close as there is too much talking for me to avoid mistakes.

Yours, truly, N. Longworth.

P.S.—Do you have ice—if so, how thick?

It will be noticed with pleasure how much interest is shown for our grape, and we hope we shall know the results of the experiment in planting the seed of our California grape in Ohio.

One very important fact in the letter strikes us as worthy particular consideration. Mr. Longworth, inquiring the history of this grape, asks: is yours a native of your region? Have you seen it in its wild state? My champange manufacturer tells me *it is exactly like theirs!*

Here we have the *assurance* of one of the best wine makers in the country, that we have a true champagne grape, and this fact should be carefully noted.

We are somewhat surprised at some of the questions asked by Mr. Longworth, for we should suppose a person so celebrated as is this distinguished gentleman, would be better posted in relation to a country like California—that is destined ere long to produce better wine, aye, better *champagne wine* than the famed *Catawba champagne of Longworth himself.*

We take this opportunity to say to Mr. Longworth, that the subject of which he speaks, the "sexual character of the strawbery," though not *generally* understood, is beginning to receive due attention; and although he says the *Botanists* of Europe may not understand it, it will not be long before the *Pomologists of California will.*

We also inform our friend that "Longworth's Prolific" strawberry is not only well known here, but is extensively cultivated and highly appreciated. We have seen some *small ones*, measuring *only* five or six inches in circumference, grown at the beautiful "Stockton Ranch" at Santa Clara, under the charge of one of our most earnest and enthusiastic cultivators, I. F. Kennedy, Esq., who has done much to awaken a due interest in the cause of Horticulture.

Mr. Longworth can do us all good in California, if he will communicate with his friends here, of whom he has a great many; and we should like much to make known his views upon the vine and its culture, and the strawberry also, through our columns, which would reach many warm-hearted cultivators who would be glad to hear from him. We further add that we *do* have ice in California, and are beginning to have our own *ice houses*, and furnish our own *ice*—so that soon we need not send our money to *Bosting* nor *Sitka*, but keep it and give it to our own people for the labor of getting out ice and building ice houses, and planting vineyards and making champagne and all other kinds of *good wine*; and our friend Longworth will receive samples of California wines of Messrs. Kohler & Co.'s celebrated make, probably before or about the time he receives this information, as we know this house has sent him some as samples.

We shall always take pleasure to post our friends up on these subjects, if they will write us from the East, but we *do* know they are very much in the dark relative to the *resources of California*, and sometimes we fear they are like those persons spoken of in the Scriptures—"they have *ears* but they *will not hear*, and *eyes* but they *will not see*, lest they become converted," and come to our country, where they can enjoy the best and richest country ever vouchsafed to man; or it may be, as we sometimes fear, nay, we *know* it, the press at the East keep back these facts, lest there be a second exodus and the *people leave there to come to us.* But we will try and spread these facts before them for their benefit.

How they Speak of California.

We have often complained that the Press in the East hold back the true condition of California from the people, or they so garble their articles as to show us in the most unfavorable light; and it is this action that is preventing the emigration we should otherwise have. We have spoken of this fact in another column, where we publish a letter from Mr. Longworth on the California Grape.

Here we shall copy an article entire from a paper that we always hold in high repute, and often quote from as a very valuable paper. But we must now speak of this article, because it is due to California, and to the interest involved, that we should correct a most egregious error:

HONEY-BEES IN CALIFORNIA.

Previous to the acquisition of California by the Americans, the honey-bee was, we believe, a stranger to its climate and its flowers. They existed in great numbers as far west as Texas, and perhaps still farther; but in this land of flowers those little architects, "the busy bees," did not "gather honey all the day from every opening flower." Since then, enterprise has introduced them at great expense and trouble. Shelton, that undisciplined but ardent lover of nature, who traversed the State, making collections of minerals and plants, and supporting himself by collecting the seeds of the beautiful wild flowers, for sale, was the first, we think, who made the trial of bringing hives of bees from the East by sea and over the Isthmus, shortly before his untimely death by the explosion of the ill-fated steamer Jenny Lind. How, or whether his bees flourished, we do not know, but at any rate they are now inhabitants of California. We saw the results of their busy industry yesterday, in the Washington Market. There were the great folds of comb, the cells full of honey, white and clear, at two dollars a pound. Another lot, the color of amber—"the tears of the gods"—colored from ving been manufactured by the bees from the rs of buckwheat, at one dollar and a half nd. At that price we did not think the per po d taste very sweet, and we did not honey sou doubtless that price is low enough taste it. Y v is considered, and also that the when its search nufactures paid one hundred owner of the Every thing is worth what dollars for the hive. It is doubtful if bees it will fetch in marke ofitable in this country, will succeed well, or be p nter that the bees do because there is so little fo the whole year, not hybernate, but eat during only during a while, besides, the flowers continue portion of the year. Yet they make tons of honey every year in Cuba.

The article appears to come from some scribbler in California, in whole or in part; and although he seems to know a little of the antecedents of the bee in California, he is either grossly ignorant of their present welfare here, or he willfully misrepresents it. He may hang on either horn of the dilemma; and as we publish the article entire, our readers can see how much he is out of the way.

To the points of his argument, against the bee, we shall in answer only say: There is no doubt of success in raising the bee, nor of making them profitable; neither is there so short a winter as not to give the required *rest* to the bee; nor are flowers deficient; nor do they *eat* all the year round; but far to the contrary, for we can prove that in no instance in the history of this wonderful creature has there ever been so great success. This can be proved by F. G. Appleton, of Santa Clara; Judge Daniels, of San Jose, and many others who exhibited hives of bees and honey at the late State Fair. And as to the profit, the writer himself speaks of the "great folds of comb and cells full of honey," selling at *two dollars per pound.* Another lot of amber color, which he calls the "tears of the gods," *at one dollar and a-half per pound.*" No success is there. This writer, however, did not taste: he says it cost too much. We can see where the trouble lay. It cost the *dimes!* No success? Hives cost one hundred dollars, too. Let us finally inform our friends of Life Illustrated, that if they had given the source from whence they derived such reliable (?) information, we would send the writer the reports of the State Society at their late Annual Fair, and this might open his eyes a little.

A word more and we have done. We were at Mr. Appleton's apiary in the middle of January, and saw the bees busily engaged bringing in upon their loaded bodies the material for their hives; and they will tell this scribbler that they can find flowers and honey cups, too, even in the winters of California.

We publish below a valuable item from the Patent Office Report, on the care of the bee, in support of our argument, that the swarms naturally formed are better and more profitable than those artificially made.

Statement of Henry Eddy, of North Bridgewater, Plymouth county, Massachusetts, in relation to Bees.

I have had much experience in the production of "artificial colonies," and also in what is termed the "non-swarming" system of bees. But I have abandoned both, and am satisfied that the bees know the best time and mode of conducting their colonization. I do not feed my bees with the expectation of obtaining thereby surplus honey for market; for no one receives back the amount he thus feeds, and what he does receive is not much changed nor improved. I adopt the natural system of swarming, destroy no bees, but keep them alive and at work; and, if I have any advantage over others, it consists in placing them in circumstances under which full scope is given to their instincts. My profits from bee culture seldom fail from the loss of colonies in winter, or by depredations of the bee-moth at other seasons. By the mode I pursue, certain swarms are made to pay, in the increase of stock and honey, a profit of 100 per cent. while others give from 500 to 600 per cent. The average profit upon my entire stock, for several years, has been 327 per cent. per annum. I accomplish this by the use of a hive of my own construction.

My surplus honey sells readily in market for 25 cents a pound.

To our Readers.—We call especial attention to the letter of our valuable correspondent Agricola, upon Science for Farmers, and to Omega's letter on Popular Education. These, each and both, are particularly worthy of careful perusal.

We hope the sketch of the Drainage of Haarlem Lake, which we give from the Report made to the Bureau of Patents, will receive due attention.

It is hardly necessary to say a word for Alice, for she has spoken for herself so happily that we can only say, she must have had pleasant dreams over that "cake" of "Katie's." For ourselves, we wish somebody would get married often, if the cake would always bring us such dreams.

The letter of W. S. G. on Post-office matters, is of serious moment, and we have no doubt will receive the attention it deserves at "head quarters." We suffer in common with others, and shall be glad to hear from all who have similar cases of W. S. G. Another week we will have something to say of Post Office affairs.

We regret we could not present the articles on Sheep Raising, Wool Growing, and Rice Planting, this week; but some facts did not come to hand.

Fires.—"It is an evil wind that blows no good." The fires at Sacramento and San Francisco, the past week, although of serious loss to many individuals, results in good to the public, for the buildings that were destroyed were not of much value, and will be replaced by valuable structures that will add beauty and strength to our cities, and offer more protection for the future against the ravages of this fell destroyer. And while we truly sympathise with the hard working and industrious, who have been thus bereft in some cases o their all, we can say to them, they are not alone in their trials—thousands have suffered before them, and they must not be faint-hearted, but put on good courage and up and "try again."

We particularly regret the loss by our friend Mons. Ricard, the florist, who was burned out on Washington street, San Francisco. He was an industrious florist, and suffered severely, having lost all. We hope his many freinds will give him a benefit by liberal patronage, when he opens again.

Our National Legislature.—Soon our delegation from California will be at their posts in Congress, and we shall be fully and strongly represented in Congress, and may we not expect to see California receive her portion of the protection and bounty of our parent legislature. To represent a State like ours at Washington is indeed a high honor, and what honor can a man desire greater than to stand in that most exalted position—a *Senator* at Washington—to represent such a State as California, and labor for her welfare.

We look with strong hopes to the future.

Legislation.—The California Legislature is now in session. How much depends upon the action of the present members! We believe we have good men in our Legislature, men that regard the welfare of the State in spite of the railings and cavilings of party, and we hope that we shall have a due proportion of the time given to the Workingmen's interest, and that Agriculture, Manufactures and the Mechanic Arts, will receive a full proportion of the interest, labor and warm sympathies of our Senators and Representatives.

Battle of Bunker Hill.—This attractive diorama is now drawing large audiences. It is truly worthy of a visit; and the ventriloquism of "Monte Cristo," is most remarkable. The whole exhibition is commendable.

Gold Discoveries.

The news from the gold diggings is of a wonderful character, so much so as almost to be incredible. We do not publish half we see, for half is but true we are indeed on the road to wealth: that is, if we can keep the gold in the country, and give it to our working-men. The gold of California belongs to California, and was intended by Providence to be used to build up California, to improve her lands, build houses, workships and manufactories, railroads, wagonroads, &c: and when our legislation shall be for California and California interests, then we may expect a greater degree of prosperity than we now enjoy.

The following are a few of the items we gather. The Sonoma Herald reports from that vicinity:

Aiken & Co. are washing with two sluices $1000 per day; the Columbia Company, $500; the Fair Company, with one sluice, $500, and nearly every company there is doing well.

The Butte Record says the quartz lead of Messrs. Williams & Co., is opening very rich, and other leads give promise of great prosperity.

We also find the following account from Crescent City:

Crescent City, Jan. 29, 1857.

Messrs. Wells, Fargo & Co.: We have just received at this place, some astounding news, which, being of interest to every one, I lay before you, under an extract from a letter received to-day by Mr. W. Smith, of this city:

"O. T., Sucker Creek, Jan. 23, 1857.

"Dear Brother: Times are very dull here, but with great excitement. McDonald & Co., have taken out from their claim one lump of gold weighing one hundred pounds; one ditto from twenty-five to twenty-six pounds; one ditto from to twelve pounds; and upwards of one hundred pounds in small pieces. They say that they have taken out upwards of $100,000. They have been on a spree for the last three days at our store.

Peter B. Smith.

"Mr. W. Smith, Crescent City."

The above is an extract copied by me. From personal acquaintance with the Messrs. Smith, I pronounce them persons in whom every reliance can be placed. This story, wonderful as it is, is to some extent corroborated by Messrs. Sam Rice & Guthrie, residents of Sailor Diggings, who are well-known in San Francisco, and who are there this trip per steamer Columbia. They state that Sheriff Hendersbolt, of Josephine county, told them that he saw [Sucker Creek is in Josephine] himself, in the possession of McDonald & Co., one piece of gold weighing about two pounds, and a camp-kettle full of the same; and that they (McD. & Co.) had told him, (Hendersbolt) that they had in their possession the largest lumps ever taken out in California.

Sucker Creek is but fifty miles from here.

Truly yours,

D. W. McComb, Agent.

Large Cauliflower.—We have been kindly presented with one of the finest Cauliflowers we have ever seen raised, and we venture to say it was never beaten. It was raised by Mr. C. Zeirwullett, a practical gardener, of Yolo county, and weighed twenty-two pounds. Another we saw weighed eighteen pounds. Beat this, gardeners, if you can!

Shipment of Treasure.—The shipment of treasure by the mail steamer Sonora, yesterday, amounted to $1,670,667 76—an increase of $137,024 44 over the shipment by the Golden Gate, January 20th.

PROSPECTUS
OF
VOLUME VII.
OF THE
CALIFORNIA FARMER.

The California Farmer was established in January, 1854; its success was a problem that its future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the rough soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer Farmer expected to meet with obstructions, trials and difficulties, that would try our strength and temper to the But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he may meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our deserts their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the California Farmer.

Our journal is devoted to Agriculture and all the auxiliary sciences—it will ever be our aim to have the Farmer find a true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the true friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Home of our glorious State. Free from every political, sectional or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that by means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication we have access to facilities for information rarely obtained.

In the department of Education, of Home Influence we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall find most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it to comparison, and abide the issue.

With grateful acknowledgments for a generous support during years of trial, and with the assurance to our friends of many improvements in the opening year, we ask a continued favor and generous influence for this year.

The terms of the Farmer are, for the year (always in advance), $5.

Offices of Publication—130 Washington street, San Francisco, and State Society's Rooms, Fourth street, Sacramento.

WARREN & CO., Editors and Publishers.

January, 1857.

[For the California Farmer.]

POPULAR EDUCATION.

LETTER NO. II.

EDITORS FARMER: In my first letter I set out with the assertion, that I should endeavor to suggest a few practical ideas on the cause of Popular Education. It is much easier for a child, in a broad field, where every change of the eye presents new objects of attraction, to wander where fancy leads, than to travel in the path which reason dictates. It is also easy to promise; but it is a difficult task for a poor artist to condense, into one view, the broad landscapes stretched out before him.

I said in my first letter, that "we want a system of public instruction which shall embrace Primary, Intermediate, Grammar, and High Schools, with a State University at their head;" the system should also have a prescribed course of study, and series of text books. The benefit of system in public instruction, as in all other things, is so evident, that I feel that I should be imposing on the good sense of your readers by arguing its necessity, were it not, that in so doing, I may call their attention to the present condition of the schools. Look at them—in what condition are they to educate the children of the State? With the exception of one city, where can you find a single creditable school building? With the exception of three or four cities, where can you find two schools using like books? Then, there are as many methods of teaching as there are different teachers, and as many different courses of study. I am informed by the State Superintendent, Hon. Paul K. Hubbs, that the schools are not open on an average, over five months in the year; consequently it almost invariably results that as often as the schools are re-opened a new teacher is engaged, and a new system of instruction introduced. This is of two-fold injury; for, not offering permanent employment, teaching is entered into by those who happen to be out of business with a view only to present necessities, and without a thought of making it a profession. It also leads to the employment of men on account of their cheapness; thus sacrificing fitness for the business to short-sighted economy. So general is this, that few schools can be found above the grade of primaries; and we have presented to our vision the farce of a State educating its children in symbols, and neglecting to cultivate thoughts; teaching them the signs of ideas—the mechanical rudiments—then leaving them just at the point where education truly begins.

Here let me digress a moment to say a word about the necessity of the immediate establishment of the State University, and a preparatory High School, which could be connected with it at very little additional expense.

Our State, unlike the States of the East, has but few children indigenous to the soil. We have no infancy, that we may wait for time to mature our institutions. Our State has sprung into existence full grown, and has now more than twenty-six thousand children in its schools; by far the larger part of this number are from the East. They have left excellent schools behind them, and if we expect to give them opportunities to pursue their education, our schools must not be confined to primaries alone. We cannot wait for the country to become thickly populated; our children are here, many of them young men and women who have passed through the lower grade of schools, in their old homes, and now require the advantages of a higher order of instruction than our present system of Free Schools can afford. It is for such, that we require a State High School and University. Their accommodations need not be extensive for the present, yet we require them both, and immediately. We have, to be sure, private high schools, private seminaries, and private colleges—all institutions of undoubted pretensions; yet so much greater is the reason for more completeness in our present system of State schools. The fact that private institutions of this class are supported, is conclusive evidence to my mind, that the State University, with a preparatory high school, should be established. It is also evidence, of the financial ability of the State. For if the people, individually, can support such establishments, they can, collectively, pay a tax that would support them; and their support would not, as now, fall entirely upon one class. But, with proper legislation, the University and a High School might be added to the system, at once, without additional taxation or incumbrance to the School Fund. Their establishment would, in addition, tend to introduce regularity and harmony in the lower but more extended branches of the system. A regular course of studies would have to be pursued in our Common Schools, in order to reach the High Schools; in the High School, to prepare for the University. The University would give the Common Schools teachers, and thus we should introduce into the system similarity in teaching, in books, and in studies.

Our present School Law provides, that the State Board of Education shall recommend a series of Text books for the schools, but does not make their use obligatory; and the provision is without any force. If such a provision is worthy of recommendation, it is worthy of enforcement; the use of the recommended series in a school should be made one of the conditions of its receiving a share of the State Fund. But we should go further than this, we should prescribe and enforce not only a regular series of Text books, but also a course of study. Children would not then, with every change of residence, be under the necessity of purchasing new books and of changing the order of their studies. This should be the first step towards introducing regularity into our schools.

The idea was advanced at the State Teachers' Convention, held at Benicia last fall, by two prominent educational gentlemen, that "it is not only the right of the parent to dictate to the teacher what his children shall study, but also the province of the teacher to seek out the peculiar tendency of the pupil's mind, and to encourage that tendency." In other words, to find in what branch of learning the scholar is smartest, that he may be taught that, to the exclusion of all others. I must confess that while I think that such views must be subversive of all order in our schools, they are also quite contrary to my ideas of the object of a sound system of education.

But, Messrs. Editors, as my letter is already as long as I think any one can be induced to read, I shall reserve the balance of my remarks on this subject for my next letter.

Respectfully, yours, OMEGA.

SPECIAL NOTICES.

☞ **CHRISTMAS GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. E. W. WIET, OF VIRGINIA.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.

WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

A CARD.

☞ THE Report of the Agricultural Society, for the year 1856, including the full Reports of the Visiting Committees to the Farms and Vineyards throughout the State, Reports on the Exhibition, the Annual Address of the President, Address of Col. J. B. Crockett, detailed list of the Exhibited Articles, the Prize Essay on the Potato, with other important matter, is now issued in a neat Pamphlet of about eighty pages, illustrated. Persons desirous of obtaining copies will please address the Office of the CALIFORNIA FARMER, when copies will be forwarded as per order. Price Fifty Cents.

For sale at the Offices of the CALIFORNIA FARMER, State Agricultural Society's Rooms, Sacramento—and at No. 130 Washington street, San Francisco. Also, at Ullman & Co.'s, J. W. Sullivan's, J. J. LeCount's, San Francisco; Dr. J. C. Cobb, and J. B. Manny, San Jose.

A PERFUMED BREATH

WHAT lady or gentleman would remain under the curse of a disagreeable breath, when by using the "Balm of a Thousand Flowers" as a dentifrice would not only render it sweet, but leave the teeth white as alabaster? Many persons do not know their breath is bad, and the subject is so delicate their friends will never mention it. Pour a single drop of the "Balm" on your tooth-brush, and wash the teeth night and morning. A fifty cent bottle will last a year.

A BEAUTIFUL COMPLEXION may easily be acquired by using the "Balm of a Thousand Flowers." It will remove tan, pimples and freckles from the skin, leaving it of a soft and roseate hue. Wet a towel, pour on two or three drops, and wash the face night and morning.

SHAVING MADE EASY.—Wet your shaving-brush in either warm or cold water, pour on two or three drops of "Balsam of a Thousand Flowers," rub the beard well and it will make a beautiful soft lather much facilitating the operation of shaving. Price only Fifty Cents.

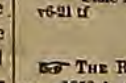
Sale of the Superior Shorthorn Herd
OF THE LATE
NOEL J. BECAR.

To the Editors of the California Farmer:



DEAR SIRS: I wish to communicate through your columns, to the Breeders of Shorthorns, that I have been authorized, by the executors of the late Noel J. Becar, to dispose of his entire herd of far famed Shorthorns. We have also determined not to sell a single animal from that herd until JUNE, 1857, on the day of my annual sale, which generally takes place about the 20th.

Many inquiries have been made by letter, and otherwise, and I take this course to answer previous and future questions. A very full and explanatory Catalogue will be issued in due time, and very generally circulated to all my present correspondents, and as many others as may desire it.

The Mathematical Works of Professor Davies are too well known to require special notice. They are the text-books (in connection with those of Professors Church and Bartlett) of the United States Military Academy at West Point, and nearly all the colleges in the United States. The elementary Course of Mathematics, consisting of the revised editions of Arithmetics, Algebra, Geometries, &c., and recommended by the superintendents of public instruction of Michigan, Illinois, Missouri, Wisconsin, Minnesota and North Carolina, and are used in the best schools and academies throughout the United States. Clark's English Grammar, Willard's School Histories, Parker's School Philosophy, Fulton and Eastman's Book-keeping, and Monteith's and McNally's School Geographies are also the favorite books in each of the above named States, as well as in all parts of the country where they are used. v7-4 2m

PACIFIC MUSEUM,
Corner of Clay and Kearny streets.

INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!

THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Worf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montez.

☞ A full Brass Band is in attendance every evening. Open every day and evening (Sundays excepted).

*** Admission 25 cents during the Day, and 50 cents in the Evening. v7-2

v6-1 Proprietor.

To be a Man in this World!
YOU MUST OBSERVE
TWO VERY IMPORTANT MAXIMS!!
FIRST, THAT
"Economy is the only sure Road to Wealth;"
SECOND, THAT
"Early to Bed and early to Rise,"
You all know what that does for a man.

By the by, speaking of Economy, Beds, Early Rising, &c., reminds us of those magnificent **Patent French Spring Beds,**

AND THE
EXTRAORDINARY REDUCTION
IN THE
PRICE OF LODGINGS!
AT
Woodward's What Cheer House,
119 and 121 Sacramento street,
87, 89 and 91 (new addition) Leidesdorff street.

Lodgings, per night ..... 50 and 75 cents.
Lodgings in first class single rooms, furnished complete, per night ..... 75 cents.

If you cherish the least feeling of regard for the pressing wants of the "inner man," the exceeding low price of board at this establishment must convince you that this is the place.

Meals, each ..... 50 cents.
Board, per day $1 00
Board, per week 6 00

In order to furnish food for the mind, there is a splendid READING ROOM, abundantly supplied with Papers, Periodicals, &c., from all parts. There is also an extensive Library of Choice Works.

☞ FREE BATHS. ☜

In short, everything calculated to promote man's comfort can be procured at the What Cheer House, 119 and 121 Sacramento street—situated in the very center of business. It is also directly opposite the Mail Steamship Company's Office, and in the immediate vicinity of the United States Branch Mint.
R. B. WOODWARD,
Proprietor.

N. B.—This House is conducted on strictly temperance principles. v6-21 tf

OY'S FINE OY'S.

Ladies' Department.

THE LAST GOOD NIGHT.

Close her eyelids—press them gently
O'er the dead and leaden eyes,
For the soul that made them lovely
Hath returned unto the skies;
Wipe the death-drops from her forehead,
Sever one dear golden tress,
Fold her icy hands all meekly,
Smooth the little snowy dress;
Scatter flowers o'er her pillow—
Gentle flowers, so pure and white—
Lay the bud upon her bosom,
There—now softly say, Good Night.

Though our tears flow fast and faster,
Yet we would not call her back;
We are glad her feet no longer
Tread life's rough and thorny track;
We are glad our Heavenly Father
Took her while her heart has pure,
We are glad He did not leave her
All life's trials to endure;
We are glad—and yet the tear-drop
Falleth; for, alas! we know
That our fireside will be lonely,
We shall miss our darling so.

While the twilight shadows gather,
We shall wait in vain to feel
Little arms, all white and dimpled,
Round our necks so softly steal;
Our wet cheeks will miss the pressure
Of sweet lips so warm and red,
And our bosom sadly, sadly,
Miss that darling little head,
Which was wont to rest there sweetly;
And those golden eyes so bright,
We shall miss their loving glances,
We shall miss their soft Good Night.

When the morrow's sun is shining,
They will take this cherished form,
They will bear it to the churchyard,
And consign it to the worm;
Well—what matter? It is only
The clay-dress our darling wore:
God hath robed her as an angel,
She hath need of this no more;
Fold her hands, and o'er her pillow
Scatter flowers all pure and white,
Kiss that marble brow and whisper,
Once again, a last Good Night.

[For the California Farmer.]

"Katie King."

She turned,—and her mother's gaze brought back
Each hue of her childhood's faded track.
Oh! hush the song, and let her tears
Flow to the dream of her early years!
Holy and pure are the drops that fall,
When the young bride goes from her father's hall;
She goes unto love untried and new—
She parts from love which has still been true.

[Miss Landon.

Yes, the sweet, roguish Katie is married! and this huge, white frosted cake that lays beside me, came (safely enveloped, by Wells, Fargo & Co.'s Express), the good qualities of which I duly appreciate by now and then laying aside this rattling goose-quill to nibble at. Well! then here is this little sweet-scented *billet-doux*, too, with Katie's own fair autograph speaking with a heart overflowing with love and hope, that she, the happiest mortal out of Paradise, really jumped the "broomstick," in company with the Hon. Judge Burke, of Mariposa, and the awful deed of matrimony was perpetrated on the 21st of January, by the Rev. Mr. Phillips, who tied the matrimonial halter firmly round their willing necks, when the day was scarcely five hours old, at "Pleasure Cottage," the house of her loving brother, Cornelius Cole, Esq., whose home is in the fair City of the Plains.

Who all were in attendance can well be imagined. Undoubtedly, Old Block (Katie's old admirer), McDonald, Hutchings, and a host of literary stars, who no doubt felt very sorry that their petted Katie had left their ranks, *oneness* and single-blessedness, for that of connubial bliss. Which we all hope that clasping of hands and union of hearts and pledging of eternal love and constancy (till death do part them), will be the crowning of their earthly bliss.

Will not that day be looked back to by those two happy candidates with joy and ecstasy, when turning over the records of the past, and the sweet remembrance will yet come down, twining like fresh Spring flowers around life's pathway. Yes, Katie, the marriage crown is now put on, and the trustful wearer, leaning upon him whose love is the brightest jewel in the diadem set amid the orange blossoms of the bridal wreath. He comes, with fond entreaties and words of love, to steal away sweet Katie King from the dear old home, nestling far away on New England's shore, where she, in happy childhood, dreamed away with kindred spirits so many hours of sunshine and glee. But again, he places her in the fairy cot where love's hands have trained the wild honey-suckle to clamber over the latticed doorway, and placed eolian lyres in all the casements. Then, who does not know there are pearls and gold shining now amid the flowers that fringe and beautify dear Katie's future pathway, and bright stars gleaming like great chandeliers suspended on spacious walls in the great castle of Hope.

There are now bright fancies, happy thoughts, tinkling around and playing with the heart-strings, sweeter by far than the evening bells, vesper hymns, or angels' chants, and pure young joys falling upon that trusting heart that was but yesterday wed, descending like copious showers of amethysts. Life, now, to the innocent, blushing bride, has become suddenly beautiful, and her soul soars upward from this cold, distrustful, sin-stained world, dove-like, loosed from its prison cage. For there seems heavenly nymphs around her path, with the finger prints of God's hand upon their brows, with a myrtle wreath for the daughter of Fame.

I had forgotten, in a moment of carelessness, to tell the readers that sister "Bessie" was of the distinguished guests who helped to make the wedding group; one, too, dear readers, who has made your acquaintance long ago. Her bright scintillations are read, appreciated and applauded, by true-hearted Californians in cottage and palace, on moor and heath, mountain and vale, and in the astute assemblage; and she astounds the hardy, tugging miner with her words of cheer, glee and wisdom, as he sits at nightfall in his cosy cabin home, the eternal silence only broken by the dashing of headlong streams tumbling way down the dizzy hight of time-worn rocks, or the wind moaning and whistling among the towering pines that stand by the doorway, whose evergreen boughs seem to reach and kiss the pale blue clouds that weepingly hang above them. Language is too lean to express the exalted opinion I have pleased to entertain for so gifted a being. Overawed, like her many gentleman admirers, I can only muster good words enough out of the vocabulary, to pay a passing tribute to the child of Genius, and whisper in her ear the oft-repeated tale of "Bessie, how I love you." Where the spirit leads, go magnets which have no surer attraction than affinities of the soul. Contentment seems to brush the cobwebs from the walls of her everyday life and makes her (the daughter of Charity), to look upon the dark clouds that flit around and overshadow her horizon, as though each and all had a bright silver lining, and peep she will out upon the busy world as though it was really flooded with rich rainbow tints, or flashes of love and sunshine from the dome of Heaven. Cheerfulness is the fountain of inward rest, whence flows the sweet stream of contentment, tranquility and hope. It is a faint gleam of Paradise, sprinkling the mind with the beams of radiant joy. Is it not the magnetism of the soul, the love sphere of trust circling with a bright bow of peace and promise? Though Time, the unfeeling monster, may bleach the hair and furrow the cheek, yet, Bessie, the original, talented one, will always feel the inflowings of youthful vigor.

Now, as we take leave of Katie, we all hope there are many bright, rosy hours in store for her in future years; and when life's summer bloom may have passed from the brow of youth, and the pattering of a dozen tiny feet of little Burkes are heard upon the floor, and clustering around the maternal knee; then, Katie, how pleasant will be the retrospect of thy past and well spent life; how hallowed the winter of its pilgrimage and how glorious its future, pointed to by the hand of Faith, and may your thoughts and attractions, as you tread life's flowery vales and rugged hills, be on and for the true, beautiful and good, and when the spirit shall ascend to a higher life and a more ennobling view of its destiny, then naught can intercept a reciprocation of the holiest and most blissful ebbings and flowings of the kindred soul.

So good bye, Katie, for
'Tis bitter thus to rend the heart
With the sad thought that we must part,
And like some low and mournful spell
To whisper but one word—Farewell.

Alice.

"Grace Greenwood," and the Little Pilgrim.

This distinguished writer—the able Editress of that most interesting little paper the Little Pilgrim, on presenting the prospectus of the 4th volume says:

In order to make this popular publication more convenient for binding and preserving, the proprietors have decided to change its form from eight quarto pages to sixteen large octavo pages, and though it will require a large additional expense, the *price will remain* unchanged.

The number for January will contain the commencement of a "Beautiful New Christmas Story, by the distinguished English author, William Howitt," called "Nipper & Toby," the Australian Peasant Boys.

We take pleasure in thus announcing this work, and the plan this gifted lady offers, by which the youth of our land may be furnished with a paper suited to their capacities, and whose every line conveys a pleasing moral influence, that must ever be promotive of good. No family should be without the Little Pilgrim in the household. It is published every month, at the very trifling sum of fifty cents per annum. Persons desirous of this sweet little work, by sending to us we will order for them, and see that it comes regularly. We hope a liberal patronage to so worthy a work.

In order that we may induce mothers to have this paper in their families, we publish the opening address of the Little Pilgrim, as addressed to mothers, and we think it one of the very best and most beautiful essays we have ever read. Well would it be if every mother in California realized the responsibility that rests upon her.

We give the article, and leave our readers to appreciate this noble address:

TO MOTHERS.

My Dear Friends:

Since I last addressed you, another year has passed over us—a peaceful and fortunate year, to most of you, I trust, yet doubtless bringing to the happiest hearts and homes something of change and sorrow.

To me it has brought the most profound and sweet, the most solemn and sacred happiness of womanhood—for within this year I have been joined to "the great and noble army of *mothers*." I am now *one of you*. Oh, if there is a time when woman may feel that she, like Mary of old, is "blessed among women," it is when she folds in her arms her first-born child, feels the touch of its tender little hands thrill on her heart-strings—feels upon her cheek the first soft breath of a life immortal—sees faintly twinkling in the misty depths of sleepy little eyes a love that shall yet brighten the world for her. This joy unspeakable, this holy triumph of maternity, is Heaven's abundant compensation for all that is suffered by woman—for all that is denied to her.

With existence renewed and freshened by the inflowing of this pure rill from the divine fountain of life—with my heart made more tender and loving by the sweet, mysterious influences by which babyhood, mightly in helplessness, and without speech most eloquent, comes to us—I feel like consecrating myself anew to the service of such as Jesus took in his arms and blessed—and of you, whom maternity makes kin to her once elected to the highest joy and deepest anguish of mortality—her whom He most loved and most tenderly remembered in his last hour. My work has now a more serious and sacred character than at first; now I can *claim* your sympathy and sisterly aid in a common purpose—an equal interest. Now I *know* your hearts will be with me, by the quickened throb, the earnest, unselfish glow of my own. So let us begin the new year—counting surely and confidingly upon each others sympathy and God's blessing.

Grace Greenwood.

Monomania of Courtship.

Why is it that so many pictures of happiness, that are out-lined in the days of courtships are never filled up by the realities of marriage? Why is it that the attractive, fascinating beauty of the betrothed, is so soon faded in the wife? Why is it that the sparkling wit, from the lips of the partner in the gay, pleasure-seeking circles, becomes stale and common-place, when heard from a matronly companion of the home fireside? Why does the elegant form adorned with the showy trappings of fashion, lose its charm when attired in the neat, plain garb of the house-wife? Why is the sympathy shown the fainting belle, in the over-heated ball-room, withheld from her, who is suffering from some of the thousand ills that woman is heir to, in the performance of her duties, as wife and mother? Is she so changed? Can a few days have wrought such a strange metamorphosis, that she at the *very mention* of *whose name* your soul was stirred with the deepest, fondest emotion of admiration and love, of which your man's nature was capable, is now only regarded with indifference, if not with absolute dislike? Is woman such a paradox, that the thousand charms in which your impassioned vision encircled her, are thrown off with the bridal veil, or has the possession of the object so ardently sought after, caused a reaction of your heart's affection, and you are too weak ever to regain an equilibrium? Have you so long been bewildered by enchantment, blinded by passion, deceived by imagination, and dazzled by external appearances, to the exclusion of all that is real, that with regard to the subject of your idolatry, you have become a monomaniac?

Let us make a slight examination of a case of love at first sight,—fever high—pulse up to one hundred and thirty—but one subject occupies the brain—strong symptoms of mania; he has magnified his divinity into something too pure and perfect for sublunary converse.

Fancy runs riot with his thoughts, as she appears before him, her brow of alabaster, her eyes rivaling the brightness of Orion, her lips of coral, her teeth of pearl, her wreathing tresses, her sylph-like form of elegance, her voice of melody unrivaled, are all too pure for him. Oh! how he feels his own unworthiness! Ah, she is an angel.

"It were all one that he should love
A bright particular star,
And think to wed it,
She is so far above him."

But as the disease advances, hope casts a somewhat cheering ray through a breaking in the clouds of despair. He casts the die which will decide his hopes of happiness, and strange to tell—he wins!

Rapturous moment,—he has won an angel—he has drawn an angel down to earth to abide in mortal companionship. The scales fall from his eyes, the light of reason enters his soul, and, looking through the sober eyes of judgment, he begins to fancy that he has, like Jacob, served for Rachel, and been rewarded with Leah. The fancied pictures vanish like the dazzling colors of the rainbow, but the pure, serene azure of the cloudless heavens, is ever left in their stead.

As clouds sweep over the sunny sky, so they may sometimes cast a saddened gloom over the scene of married life; but, the sunlight of an impassioned affection may ever dispel them. Then when seeking for a kindred spirit, for a heart beating in unison with your own, for one who will ever share your joys and sorrows, look, by the clear light of reason, upon the real charms; nor expect perfection from earthly growth; and, never for a moment, believe the object of your preference an angel, till you have seen her wings.—[Mattie Marble, in Wisconsin Farmer.

A Mother's Appeal.—In the Knickerbocker Magazine for January, we find the following: In a metropolitan criminal court, eight years ago, a poor woman, whose boy had been sentenced to a long term at the penitentiary, for some not well proved offence, said: "Won't your honor give him a shorter term? He is a good boy to *me*, your honor—he always was. I've just made him some nice clothes, your honor, which fit him beautiful" (and she looked, as she said this, as only a mother *can* look at her boy); "and if you give him a long time to stay in prison the clothes won't *fit him* when he comes out—for he's a growin' boy. Poor mother! she had saved much (for her) from her scant earnings, to clothe her boy "like her neighbor's children." This was too much for her son. He melted—he wept—he repented—he was forgiven. *And he is now one of of the most promising, enterprising and honorable young merchants in our city.* Every word of this is true, and known to be so to very many persons.

Music of Words.—Listen to the mother talking comfort to her young babe. The comfort is surely not in the words, for the child understands not one of them. It lies, of course, then, in the music of words. It is the mother's tone of voice—her music—which the child understands and receives into its little troubled heart.

Universal Love is like a mitten, which fits all hands alike but none closely; true affection is like a glove which fits one hand only, but sets closely to that one.

Dobbs Makes "A Pint."—Dobbs walked into a *Dry Goodery* on Court street, and began to look around. A double *jinted* clerk immediately appeared to Dobbs.

"What can I *do* for your, sir," says he.

"A good deal," says Dobbs, "but I bet you won't."

"I'll bet I will," says the knight of the yard-stick, "if I *can*."

"What'll you bet of that?" says the imperturbable Dobbs.

"I'll bet a fourpence!" says the clerk, with a cute *nod*.

"I'll go it," says Dobbs. "Now trust me for a couple of dollars wuth of yur stuff!"

"*Lost*, by Ned!" says yard-stick. "Well, there's the fourpence."

"Thank you; call again, when I want to *trade!*" says Dobbs.

"Do, if you please; wouldn't like to lose your custom," says the clerk, "no how."

Polite young man, that; as soon as his chin vegetates, provided his dickey don't cut his throat, he'll be arter the gals, Dobbs thinks.

HORTICULTURAL.

To Farmers and Nurserymen.

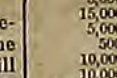
BRADSHAW & CO.,
Corner of California and Battery streets,
San Francisco

v4-26

Commercial Nursery,

Three-Quarters of a Mile East of the City of San Jose.



THE Proprietors of this Nursery, having received the award of the

FIRST PREMIUM
OF THE
STATE SOCIETY

the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of

FRUIT AND ORNAMENTAL TREES,
For the Trade of 1856 *and* 1857,

that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.

Our Stock consists of

One Hundred Thousand Trees,

FROM FOUR TO ELEVEN FEET IN HIGHT.

Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.

SMITH & WINCHELL.

v6-13 3m

Briggs' Nursery,

Three Miles from Marysville, on Great Road.

THE Proprietor of this extensive Nursery would invite those who intend to establish Orchards the coming Autumn to the following stock of Trees, which will be ready for sale:

70,000 Extra Peach Trees, from 3 to 6 feet;
100,000 Dormant Buds;
6,000 Full size Plum, of best kinds;
10,000 Dormant Buds;
5,000 Cherry Trees, good size—best sorts
15,000 Pear, of the rarest kind only;
5,000 Apple Trees, ready for orchard;
500 Quince, of very choice kinds;
10,000 Nectarine Trees, of extra size;
10,000 Apricot " " "

The above are grown under the eye of the undersigned, and the kind of fruit he has exhibited the present year is the best guaranteed that they are indeed fruit trees that will bear.

The proprietor of this Nursery will receive from the East this Autumn an invoice of some

Fifty Thousand Trees.

These will be of extra sorts, and such as the proprietor will guarantee to his patrons.

The proprietor being desirous of encouraging others to plant Orchards of fine Fruit Trees, will offer the following inducements:

Peach Trees, No. 1, named first		$1 50	each.
" " Dormant buds		50	"
Plum " full size		2 50	"
" " Dormant buds		1 25	"
Cherry " full size		2 50	"
Pear " " "		1 50	"
Apple " " "		1 87	"
Quince " " "		1 50	"
Nectarines		1 50	"
Apricots		1 50	"

All the above trees will be warranted true, as the proprietor is more desirous to have his customers succeed and do well, than merely to sell his trees.

☞ Purchasers of over $1000 will receive a discount of twenty per cent.

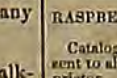
v6-1 G. G. BRIGGS, Marysville.

The French Garden,

Near the Cottage, on the Santa Clara Road.

A. DELMAS,.....Proprietor.

GRAPE VINES! GRAPE VINES!!



THE Proprietor of these extensive grounds would take pleasure in calling the attention of the public to the very great collection of Grape Vines, which he will offer the present season.

The Fruit from this Garden was exhibited at the late State Fair, and received the Diploma of the Society. The White Wine made from this Vineyard received the First Premium of the State Society. This Vineyard also obtained the First Premium for the Best Vineyard of Foreign Grapes, the present year.

The Proprietor will offer the present season his grand collection of Eighty One Varieties. Among this splendid assortment will be found—

Black Hamburg;
Chasselas of Fontainbleau;
Chasselas of Frontignac;
Cannon Hall Muscat;
Muscat of Alexandria;
Charlesworth's Tokay;
Syrian; Black July;
Golden Chasselas;

Together with every variety of the Grape known and approved.

The undersigned is confident that this collection is the largest and most complete in the country, and to this the attention of the public is particularly invited.

The subscriber would also offer—

APPLE, PEAR, PLUM, PEACH, APRICOT, NECTARINE, and other Fruit Trees.

—Also,—

RASPBERRY, CURRANT and GOOSEBERRY TREES, In good assortment.

Catalogues of all the varieties grown in this Garden will be sent to all who desire them, by addressing letters to the proprietor.

All orders will be answered promptly, and Trees and Vines carefully packed for any place in the country.

A. DELMAS,
v6-13 4m French Gardens, San Jose.

San Jose Nursery.

THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of

FRUIT AND ORNAMENTAL TREES,
ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.

Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 69 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.

The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer

Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.

In each of the above the very best and most approved varieties.

The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—

Black and Honey Locust;
Chinese Ailanthus, Catalpas.

—Also,—

26,000 Mulberry Trees,

All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!

In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.

The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.

Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.

The Farmer's Drill.

[PATENTED, AUGUST, 1853.]
THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct 28th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.
Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.
This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

SACRAMENTO, CAL.
FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.
FIRSTLY.
I claim to be the Oldest Established Legitimate Druggist in this City.
Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.
SECONDLY.
Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for
Half the Price Usually Charged
By other Druggists, legitimate or illegitimate, and of
The Purest Drugs and Chemicals.
THIRDLY.
I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.
FOURTHLY.
We Keep Open all Night!
And charge no more for medicines than in the day time.
FIFTHLY.
We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.
SIXTHLY.
Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.
SEVENTHLY.
We have received the agencies for the following valuable articles:
Budds' Nerve and Bone Liniment, warranted the best in California.
Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.
Flower of the West, for Fever and Ague.
Delight's Spanish Lustral, for the Hair.
HUDSON'S CALIFORNIA GROWN MUSTARD.
Also, agencies for all the other popular medicines too numerous to mention.
EIGHTHLY AND LASTLY.
We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.
v6-12 J. L. POLHEMUS.

California Steam Navigation Company.

THE fast and splendid low pressure steamers NEW WORLD and ANTELOPE will leave on alternate days for SAN FRANCISCO, at 3 o'clock P. M., from the foot of K street.
The steamer NEW WORLD, S. Seymour, Master, will leave on Tuesday, Thursday and Saturday.
The steamer ANTELOPE, E. A. Poole, Master, will leave on Monday, Wednesday and Friday.
The steamer HELEN HENSLBY, E. C. M. Chadwick, Master, every Sunday, at 2 o'clock P. M.
For Marysville and Intermediate Landings
Steamer CLEOPATRA, W. H. Taylor, Master, will leave Tuesday, Thursday and Saturday; and
Steamer GOV. DANA, W. S. Summers, Master, will leave Monday, Wednesday and Friday, at 7 o'clock A. M. from bark Orb.
For Colusa, Red Bluffs and Intermediate Landings.
The steamers SAM SOULE, G. V. Hight, Master; and GEM, M Littleton, Master, will leave for the above named places on Tuesday, Thursday and Saturday, at 7 o'clock A. M., from the storeship Antelope.
For freight or passage by any of the above boats, apply on board, or at the office of the California Steam Navigation Company, on board the brig Globe.
v5-10 A. REDINGTON, Agent.

REMOVAL.

Mercantile Library Association.

THE ROOMS OF THE ASSOCIATION, being those formerly occupied by the Pacific Club, on the corner of Montgomery and Jackson streets, over the Banking House of Messrs. Pioche, Bayerque & Co., will be thrown open to the public on Monday next (15th of December instant). The rapidly increasing extent of the Library and the constant accession of members, rendered it imperative that more spacious apartments should be secured for the purposes of the Institution. The new rooms will afford ample accommodations and will be fitted up with every regard to comfort and convenience. A GALLERY OF FINE ARTS will constitute a new and attractive feature in the new rooms, and the attention of citizens and others having Paintings and other Works of Art in their possession, is respectfully called thereto; all such objects will be received and receipted for; they will be conspicuously displayed, and will be at all times subject to the order of the depositors. To artists especially this will afford a favorable opportunity to exhibit their works; and the Directors cordially invite them to avail themselves of the advantages thus offered.
Books of Reference, Maps, Charts and Manuscripts would be gladly received on the same conditions; also, Natural Curiosities and Specimens for the formation of a Cabinet.
In order to allow proper time for the removal and rearrangement, the Library and Reading will be closed from this date, until Monday, December 15th. v6-24

To Architects.

PLANS ARE SOLICITED FOR A HALL FOR THE MECHANICS' INSTITUTE.
THE HALL to be in size—seventy feet front by one hundred and twenty-five feet in depth, three stories high above the basement; the first story to be designed for Stores, the second for a Public Hall the entire length of the building, and the third Miscellaneous. The Hall to be situated on a corner lot, seventy feet front by one hundred and thirty-seven and one-half feet in depth.
Plans for the above will be received up to the FIRST DAY OF MARCH NEXT, and for the set of plans most appropriate, and best adapted to the wants of the Institute, the sum of Three Hundred Dollars will be paid in the Stock of the Institute, when such plans shall have been adopted by the Board of Directors.
N B—Architects will accompany their plans with the necessary explanations, and the probable cost of building, and in no case must their name appear on either plan or explanation; but may be designated by a private mark, by which they may be identified by a duplicate.
By order of the Board of Directors.
G. D. STREET,
Chairman of Committee on Buildings.
Hall of the Mechanics' Institute, Dec. 19, 1856. v6-24

FIRST PREMIUM AGAIN!
R. H. VANCE,
HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.
Rooms, cor. Sacramento and Montgomery streets, SAN FRANCISCO.

What is an Ambrotype?
'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

N. B.—Highest price paid for Hides, Calf, Sheep, Bear, Deer Skins, &c. v7-2

MEDICINES, &c.

FOR THE REMOVAL AND PERMANENT CURE OF
All Diseases arising from an Impure State of the Blood or Habit of the System.
In this preparation are strongly concentrated all the medicinal properties of Sarsaparilla, combined with the most effectual aids, the most salutary productions, the most potent simples of the vegetable kingdom; and the combination is such that one modifies and improves the other, producing a compound differing entirely in its character and properties from any other preparation, and unrivalled in its operation on the system when laboring under disease. It has been so fully tested, not only by patients themselves, but also by physicians, that it has received their unqualified recommendations and the approbation of the public; and has established on its own merits a reputation for VALUE and EFFICACY far superior to the various compounds bearing the name of Sarsaparilla.

From the Army.
MONTEREY, CAL., January 18, 1853.
Messrs. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefited as I have been. I arrived here by the overland route, about the first of October last. A few days after I was attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely.
With high regards, yours, &c.,
J. H. MILLER, Lieut. U. S. A.
Prepared and sold by A. B. & D. SANDS, Wholesale Druggists and Chemists, 100 Fulton-street, corner of William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

CLOVE ANODYNE
TOOTHACHE DROPS.
Complain no more of Aching Teeth.
These Drops have been extensively used by thousands, whose experience has proved that the Anodyne will give immediate and permanent relief after the failure of every other remedy. It is pleasant to the taste and smell, and a few applications will entirely remove the pain and soreness from a decayed tooth, so that it may be filled and rendered as useful as ever. When the pain proceeds from the face, or from the gums around a tooth apparently sound, this Anodyne will give a speedy relief by rubbing a few drops on the part affected.
Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, No. 100 Fulton-street, corner William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v6-21 3m

WHAT CHEER HOUSE.—"Be sure you are right, then go ahead." We consider ourselves right in favorably mentioning and recommending to the public this well known establishment. Having secured a world-wide reputation for its well supplied tables, French patent spring beds with the best of curled hair mattresses, clean bedding, etc., together with the extraordinary low rate of charges, must always make this a favorite house with the traveling community. We take pleasure also in saying that this house is conducted on strictly temperance principles, and thus order, neatness and cleanliness are everywhere visible throughout the establishment. In order to accommodate the increased patronage, the proprietor has just completed and furnished a large fire-proof five-story building; the first story of which contains a spacious reading room and library, amply furnished with a choice collection of standard works. We wish the proprietor of the "What Cheer" success in his future career.

ON DITS.—Rowe, the celebrated circus pioneer, has returned from Honolulu, and we may expect fun for the laughter-loving.

Death of Chas. A. King.—The friends of this comedian will learn with deep regret the loss of their friend and co-laborer on the stage. Whatever may be said of the stage or of actors, Charley King will ever shine as a Star in their memories, for his many good qualities and generous actions.

All our friends in the country, who are visiting the city, and desire to subscribe for the CALIFORNIA FARMER, or leave *a Fire-spot*, can find the office at 130 Washington street, San Francisco. Don't forget to call.

FATHER ADAMS continues to make the bears dance, and Wirsen coils the snakes about him like so many cords, and fears them as little as the jump-rope of a little girl. Verily the days are coming when we shall see "the lion lie down with the lamb, and a little child lead them." Go and see.

LIMANTOUR.—In the U. S. Circuit Court, yesterday, Jose Y. Limantour gave bail in the sum of $35,000, to appear and answer to the indictment now pending against him, at the July term of the Court. It is stated he left this city by the steamer Sonora, on his way to Mexico.

HOLLOWAY'S PILLS are famous in cases of termination of blood to the head, and save the lives of thousands who suffer from Dyspepsia, Liver Complaints and Bile. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box.

THE sun is like God, sending abroad life, beauty, and happiness; and the stars like human souls, for all their glory comes from the sun.

On the New Mission Road, San Francisco.

THE Proprietor of this large Nursery and Garden desires to call the particular attention of the friends of Horticulture to the collection now offered, among which are the following:

Fruit and Ornamental Trees;
Roses, of every choice variety;
Green-house Plants, and Garden Plants.

Together with every article needed in Orchard, Garden, Greenhouse, Parlor or Garden.

The undersigned would most respectfully invite purchasers to visit his Garden and Greenhouses. Having been long established in the business he is confident he can furnish everything desired, as agreeably as any other establishment.

v6-21 tf JAMES O'DONNELL.

Linnæan Botanic Garden and Nurseries,

Flushing, New York.

WM. R. PRINCE & CO. offer for sale as follows:

Fruit and Ornamental Trees (including evergreens) of all kinds and sizes;
Shrubbery, Roses, Bulbous and Herbaceous Flowering Plants;
Dahlias, Tree and Herbaceous Paeonies;
Greenhouse Plants of all kinds, including 500 splendid varieties of Camillias.

ALSO,

Stocks for Ingrafting Fruit Trees;
Young Trees of all kinds suitable for Nurseries;
Fruit and Ornamental Tree and Shrub Seeds, including Evergreens;
Garden, Agricultural and Flower Seeds in any quantity, at lowest wholesale rates, of the present crop, and warranted of the first quality;
DIOSCOREA BATATAS, or Chinese Potato, the only American grown stock in the Union;
Figs, Olives, Pomegranates, Licorice, Tanner's Sumach, Madder, &c., in quantity for plantations;
Strawberries, Raspberries, Gooseberries, Currants and Blackberries of all the superior varieties.

This establishment comprises the most extensive collection in the Union.

Priced Catalogues at the lowest rates will be sent to applicants.

N. B.—Apple, Pear, Peach, Plum, Cherry, Quince, Almond, Prune, Apricot and other Fruit Seeds in any quantity. v6-5

Pioneer Nursery.

THE undersigned, proprietor of this now well established Nursery, to which was awarded the First Premium by the State Agricultural Society at its last Annual Fair, announces to his friends and patrons that he is prepared to offer them, the present season, a collection of Fruit and Ornamental Trees equal to any in the country, and far superior to any heretofore offered.

Having had in bearing last year, forty-seven kinds of Apples, and having in bearing the present year, about thirty-five varieties of Peaches, added to the knowledge we have acquired by comparing them with other varieties grown in various localities, we have been enabled to ascertain with certainty what kinds are worthy of culture, and such varieties only do we offer to the public the present season.

We call your attention particularly to our Seedling Peach, named by the Academy of Natural Sciences, "Myers' Rareripe," which we offer this season for the first time. The following certificate will speak for itself:

ALAMEDA, July 25th, 1856.

The subscribers having seen and eaten of the new variety of Peach grown by A. H. Myers, in his "Pioneer Nursery," Alameda, and by the Academy of Natural Sciences of San Francisco named "Myers' Rareripe," do cordially and unhesitatingly pronounce it a most valuable acquisition to the Pomology of our State, in regard both to its early ripening, and its melting, luscious qualities, being in these respects superior to any variety of Peach that we have yet met with on this coast.

George Lee, Lee's Garden, Oakland.
Henry Gibbons, M. D.
N. W. Palmer, firm of Sonntag & Co., Horticulturists.
T. J. Nevins, Amateur Gardener.
A. M. Crane, County Judge.
Wm. Sherman.

We speak to our friends and patrons thus early, that they may be apprised of our ability to supply them with all the desirable varieties of Fruits, and thus save the trouble and expense of sending out of the country for Trees; and we can assure them that time and money will be saved by giving us a call.

Our stock embraces—

40,000 Apple Trees, forty varieties, one, two and three years old;	
30,000 Peach Trees, in bud, best varieties;	
4,000 Peach Trees, two years old,	"
1,000 Pear Trees,	"
1,000 Cherry Trees,	"
1,000 Plum Trees,	"
1,000 Apricot Trees,	"
1,000 Nectarine Trees,	"

Also, Almond, Fig and Quince Trees;

25,000 Currant Bushes, with a sprinkling of everything rich and rare, usually found in a well regulated Nursery.

We particularly invite our citizens to our Nursery and examine for themselves before purchasing elsewhere. Information respecting the best varieties of fruits, and the planting and pruning of them cheerfully rendered.

A. H. MYERS,
v6-19 3m Pioneer Nursery, Town of Alameda, Alameda Co.

Smith's Pomological Gardens AND NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast.

Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear,
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of extra size Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

☞ Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ J. P. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.

EDUCATION.

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by CORNELIUS J. FLATT, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17TH of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS: PER MONTH

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.

No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.

For further information or references, address the Principal.

v6-24 C. J. FLATT.

Young Ladies' Seminary, Benicia.

MISS MARY ATKINS, : : : : : : PRINCIPAL.

THE School Year of this Institution is divided into two terms of five months each; but the term commencing January 5, 1857, will close May 1st, 1857, in order that the semi-annual vacations may take place hereafter in May and October.

At the close of each term there will be a thorough examination of the pupils in all of their studies.

The Course of Instruction is such as is usually pursued in High Schools, and also includes the accomplishments of Drawing, Painting, Vocal and Instrumental Music.

The government of the school is gentle, but decided. A daily account of the recitations and deportment of each pupil is sent, monthly, to the parents, who are thus regularly informed of the progress of their daughters.

All of the pupils board either with their parents or at the seminary, and are under the special care of their parents, or of the teachers of the Institution.

The School is open to inspection at any time, and friends are cordially invited to visit it; but no pupils can receive calls from any persons, excepting those introduced by the parents and guardians to the principal.

TERMS: PER MONTH

Tuition in the Higher English Studies	$ 8 00
" " Common "	6 00
" " Music and use of Instrument	10 00
" " Ancient and Modern Languages	5 00
" " Drawing and Painting	4 00
For Board (per week)	6 00
For Washing (per session)	25 00

No extra charge will be made for Vocal Music or Embroidery: neither are the pupils required to furnish their rooms, bedding, &c.; but each pupil must have every article of clothing distinctly marked with her name.

Payments are to be made invariably at the beginning and middle of each term, in advance.

v6-20 tf

THE "HORTICULTURIST" AND Journal of Rural Art and Rural Taste.

COMMENCED BY A. J. DOWNING,

Author of "Landscape Gardening," "Designs for Cottage Residences," "Fruit and Fruit Trees of America," "Country Houses," etc.

Edited by J. JAY SMITH, Editor of the North American Sylva.

THIS popular publication, which is gradually extending its influence throughout the country, and is becoming indispensable to the tasteful Gardener, the Fruit Culturist, and the Floriculturist, will be continued under the editorship of J. Jay Smith, whose ability and taste in matters of country life are highly appreciated through the country.

The cultivation of the beautiful, both in Nature and Art, is justly esteemed an important element in education, and recommends itself to the attention of all who wish to make their dwelling and grounds attractive, and to surround themselves with those luxuries and adornments that spring from the fruitful bosom of the earth when cultivated by the practical hand. The typographical execution of the HORTICULTURIST is designed to be an index to its contents—neat, chaste and elegant. It embraces within its scope—

I. THE DESCRIPTION AND CULTIVATION OF FRUIT AND FRUIT TREES—a subject of vast importance, and in which we are already more interested than any other people.
II. THE DESCRIPTION AND CULTIVATION OF FLOWERS AND FLOWERING PLANTS AND SHRUBS, from the most delicate and tender to the most hardy and robust.
III. TO THE DESCRIPTION AND CULTIVATION OF ALL EDIBLE PLANTS, which are, or should be, grown in our gardens.
IV. TO GARDENING AS AN ART OF TASTE—with Designs for Ornamental or Landscape Gardening.
V. TO RURAL ARCHITECTURE—embracing Designs for Rural Cottages and Villas, Farm Houses, Lodges, Gates, Vineries, Ice Houses, etc., etc.
VI. TO ARBORICULTURE—or the Planting and Culture of Forest and Ornamental Trees.
VII. TO BOTANY AND ENTOMOLOGY—so far as these branches are connected with the general subjects to which the work is specially devoted.

The extended and valuable correspondence of THE HORTICULTURIST presents the experience of the most intelligent cultivators in America; the superior illustrations, and the instructive and agreeable articles from the pens of the editor and contributors, make it eagerly sought after by even the general reader interested in country life. To all persons alive to the improvement of their gardens, orchards, or country-seats—to scientific and practical cultivators of the soil—to nurserymen and commercial gardeners, this Journal, giving the latest discoveries and improvements, experiments and acquisitions in Horticulture and those branches of knowledge connected with it, will be invaluable.

A New Volume (12th year) commences with the January number for 1857; and it will be the constant aim of the editor and publisher, by every means in their power, to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style of the periodical press, each number containing 48 pages, embellished with a frontispiece and several other original and well-executed engravings. At the end of the year it will make a volume of six hundred pages, beautifully illustrated with over 100 engravings, many of them drawings of fruit and flowers from nature. These volumes, if taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature.

TERMS—Two Dollars a year—Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the art—Price, $5.

☞ All subscriptions must be addressed to the Agents, or to, ROBERT PEARSALL SMITH,

MISCELLANEOUS.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely *regular*, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of *every* species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is ma' wha' an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promotes habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,345 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

Agricultural Reviews and Essays---No. 3.

Farming in the far North.

JOURNAL of a Residence in Norway, by Samuel Laing, Esq. (Longman & Co., London).

THE Scandinavians are now a people of little political importance among the nations of Europe, and least of all the humble inhabitants of Norway. Once however, even they had their time of power, when as Sea-Kings of the North they made successful invasions on the shores of Great Britain and Ireland, where by force of arms they established little colonies, and whence they carried away considerable booty. Nor were the territories of their sovereign confined to their own side of the German Ocean, nor his jurisdiction beyond seas of an ephemeral character. The Scottish islands of Orkney and of Zetland formed a part of the Norwegian dominions until the year 1468, when they were given as a marriage portion by Christian I. King of Norway and Denmark to his only daughter Margaret, on her marriage with James III. of Scotland.

One of the principal of their Sea-Kings was Swein. Every year, as soon as that noted filibuster had sown his barley, he was in the practice of making a regular summer cruise, sometimes with six or eight ships, and going back to his little island of Gairsay in autumn, to divide with his companions the booty he had collected in his expedition, and in time to harvest his crops.

The old legends and family traditions of Scotland tell of many a bloody battle fought on the occasion of such petty invasions; and chief of all, how the ancestor of the present noble family of Errol, unyoking his steers from the plow, and taking the yokes from their necks, with only his two sons to assist him, met boldly in a narrow defile a large body of those reckless invaders, and put every man of them to death.

But the Scots were not always so fortunate. So they gained along the north-eastern coast of Scotland a firm footing, which they managed to retain for some time, and carried their insolence so far as to quarter in every farm-house one of their number, to act as a spy, and report to the garrison at head-quarters anything which he might consider suspicious in the conduct of the inmates. But the Scots would not submit to such degrading bondage. And as they did not understand their language, they concerted a plan to rid themselves of those daring invaders at one blow. The eve of the festival of All-hallows was the night selected, on which to put their plan in execution. It was a bloody one, but it proved their salvation. The plan was this: As soon as it was night, and all quietly seated together at the family hearth, without previous notice, or giving him time to suspect, at once to assassinate the noxious intruder, or rather robber, who had dared, unbidden, to share so long and so ungratefully in their hospitalities. And then, to set fire to a pile of faggots, collected for the purpose of thereby announcing to their neighbors that they had done the deed; and as soon as the fires became general, to convene at a place agreed upon, and marching boldly together to attack the garrison at head-quarters, and drive every man of them into the sea. They succeeded; and the Scots never afterwards allowed the Sea-Kings to gain a foot-hold on their shores. But they kept up a memorial of their deliverance; and to this day continue to kindle bonfires on "Hallow-een," and spend the evening with all those innocent festivities and amusements, which Burns describes so pleasantly.

The times are altered. Norway now affords an agreeable place for the cockneys of London to picnic in, during the summer months; where they enjoy scenery still more grand and romantic than that of Scotland, and catch fish with fewer restrictions, and in greater abundance. Such pleasing writers as Inglis have done much to draw them thither—writers who do not travel for commercial purposes, or a desire of gain; nor for the purpose exactly of getting acquainted with the manners of the people, but to get better acquainted with Nature in her sublimity and beauty, and who perhaps do more to soften down the asperities of national feeling, by inducing others to follow in their footsteps, than any other class.

Our author, though an educated and intelligent man, is not exactly one of this character. At all events he wishes to be more practical. He sees among the Norwegians an example for all Europe, in their institutions and laws; and in their fertile valleys, an excellent opportunity for gentlemen of moderate means to get themselves farms of their own, and have all the comforts and conveniences of life, at much less cost than they could do in Britain. He is a Scotchman, and rather an eccentric one. He sees everything through his Scottish spectacles, and measures everything by the Scotch ell, and not by the standard yard. Instead of stating the width of a river in plain English, he tells us of one which is as broad as the Tay at Dunkeld, and of another, as the Tweed at Kelso. And he goes on, sometimes using much sophistical reasoning to prove undisputed facts; and sometimes, after reasoning soundly, drawing very singular conclusions. He is an amateur farmer, and not a really practical one; although the reader (if a farmer) discovers it without his meaning to tell him so. But after all, he is an agreeable writer; and from his having lived three years in the country, and been himself engaged in farming there, he has succeeded in making a very interesting and instructive book, especially to agriculturists.

He speaks like a good republican too, and looks on farming as but a minor object. "The condition of the people here in relation to soil, climate, crops, and pasturage, appears less favorable than in the Scottish highlands. It is vastly better however in another respect—they have no rents to pay, being the owners of the farms they cultivate. Here are the highland glens without the highland lairds. It is, I am aware, a favorite and constant observation of agricultural writers, that small proprietors make the worst farmers. It may be so; but a population may be in a wretched condition, although the country is very well farmed; or they may be happy, although bad cultivators. Good farming is a phrase composed of two words, which have no more application to the happiness or well-being of a people than good weaving, or good iron-founding. That the human powers should be well applied, and not misapplied, in the production of grain, or iron, or clothing, is no doubt an object of great importance; but the happiness, or well-being of a people, does not entirely depend upon it." "Why," says the reader, "does he not come at once to California?" But the reader does not know him yet. He has a sort of prejudice against America; and for the best of reasons. He is conscious that like many a hapless Englishman he would be quite astray here; and would absolutely be helpless, and of no use whatever. He does not mean to cross the Atlantic on any consideration. So he does not care for flattering us. He will not even give Americans credit for building log-houses, which are the only kind of houses used in Norway. "I give this minute description," says he, after describing their farm-buildings, "because one hears so much of the log-houses of America, and this is probably their mother country." We might excuse him for this, as he seems so much in love with the Norwegians, as scarcely to give his own countrymen justice. "I am afraid," he says, "we are a little too apt in Scotland to claim the merit of inventions which we never made. We claim the invention of the thrashing-machine, yet it is diffused over a part of Norway, so much more universally than it is in Scotland, that our right to the invention seems very doubtful. It is certainly not probable that a Scotch invention should find its way to Norway, and be much more generally diffused in its most remote districts, than in any part of the country which claims the invention. It seems much more likely, that it was borrowed from our poor neighbor in the North by our ingenious Scotch inventors."

But let the author tell his reasons for preferring Norway to America, for it is one of the most sensible paragraphs of his book. "Norway is certainly not a country in which the emigrant can make money; and being fully peopled up to its resources, it could absorb none of our laboring class of emigrants. The man who can work at a trade, or even at ordinary farm-work, will do much better in America. He who has a little capital, and wishes to increase it, and knows how, will also I have no doubt do much better there. But there is a class who can neither work nor trade, but who have a little money, either as capital or as income, which they merely seek to live upon with some degree of comfort. They may have the wish, but they are sensible that they have not the skill, to turn their capital to any advantage. For such people, it is evidently ruin to emigrate to a country where labor is dear, as it in America; for labor is the very thing they must buy, cost what it will. Cheap land is of no use to them, without cheap labor to cultivate it. The dearness of labor in America makes it, no doubt, an excellent country for those who have labor to sell. But how does it answer for the emigrant who is out-and-out a consumer, not a producer—who cannot labor himself in any way that is profitable? To this class, the country in which labor costs sixpence a day is ten times better than that in which it costs five shillings. Norway presents many advantages to such emigrants."

To Norway let them go. They would only be gentlemen loafers here; and we have plenty of that class already.

He talks freely too of our domestic arrangements on this side of the Atlantic; but he does not appear to be very correctly informed on the subject. The class of domestic servants in America (he does not mean slaves) appears, by the accounts of travelers, to add little to the comforts of social life. They appear to labor under a constant desire to show that they are equal in all respects to those whom they serve, or as they express it, help. The cause of this lies perhaps as much in the position of the master, as of the servant class in American society. Rank and privilege do not exist, or have no social distinction. Wealth can command no particular respect, where, to the extent of a good and independent living, it can be so easily acquired, and education to a certain extent is common to all. The serving class are in the right. In the structure of the society, there is no basis real or fictitious, upon which the employer can claim the respect of the employed."

By this time I suppose the reader is tired of his philosophizing, and wishes to know what he has got to say about Norway. With the reader's permission I will partly be his spokesman.

He arrived at Christiana on the 21st of July; and only staid a few days before he was away among the farmers, where he met any quantity of Scotchmen, all of whom were doing well. The work was going on briskly in every direction. They were horse-hoeing their potatoes, draining and clearing new land, and applying lime as manure; and he had the satisfaction of thinking that the peasantry were not mere petty holders, from hearing a large bell used, "as in Scotland," for the purpose of calling the laborers to dinner. All this set our author a-thinking; and for the benefit of the public he thinks aloud, and calculates considerably about what he sees going on around him. But he has not seen much of the country yet. So he concludes to go to Drontheim.

But he meets temptations which arrest him for a time by the way. "One of the Englishmen whom I met at Jerkin gave me a fishing rod. He had caught trout until he was actually tired, having killed above three hundred in a very few days. Having fortunately brought with me some flies and tackle, I went out this forenoon (August 21st) to try my skill. Although I never fished trout before, I caught above six dozen between breakfast and dinner. They were small, but the landlord brought in some as big as salmon, caught on a lake on the Fjelde. I have seen ordinary sea-trout of three or four pounds weight, but these exceed eighteen pounds." What a glorious country for old Izaac Walton!

He grumbles a little about the country inn; and then grumbles with Englishmen for being too particular. "An Englishman, bred in the midst of that peculiar attention to cleanliness and nicety, which even now is almost exclusively English, will find much to horrify him in a Norwegian inn; but such gentlemen are scarcely in a situation to judge of the habits of a people. They have been bred in a very nice, cleanly little world, bounded perhaps by the Trent, or at most the Angel at Ferrybridge on the north, and the Ship inn at Dover on the south. It is scarcely fair to compare the state of manners of all European nations with this standard. *He who will travel fairly must eat what is placed before him, and sleep where there is a bed to lie down upon.*" To be sure he must, like a good Christian, and a good Californian. Does not St. Paul himself tell us to "eat that which is set before us, asking no questions?" And if we had those fastidious Englishmen in the mines, I suppose they would sometimes be glad to sleep on any kind of bed, if they could get one!

He does not stay long at Drontheim. He goes on to Levanger; in the neighborhood of which is the beautiful valley of Værdal. "I do not know in Scotland, says he, a valley so beautiful as this of Værdal; the crops of grain so rich and mellow; the houses so substantial and thickly set; farm after farm without interruption, each fully inclosed and subdivided with paling; the grass fields of so lively a green, as free from weeds and rubbish, and as neatly shaven as a lawn before a country gentleman's windows; every knoll, and all the back-ground covered with trees; and a noble, clear river running briskly through it.

In this valley our author rented a small farm, for which with another pasture farm a few miles from it, one of which universally forms an appendage to the farms of the lower valleys, which contain the only land that is cultivated, he paid (the out-farm excluded) about one dollar per acre. In such a district, such a farm, with all the advantages which he goes on to describe, must have been very cheap indeed; and one feels disposed to concede to him the point, that a man with a small income derived from other sources might live very comfortably in such a country; especially as the usual wages of farm laborers, with provisions, is only nine cents per day.

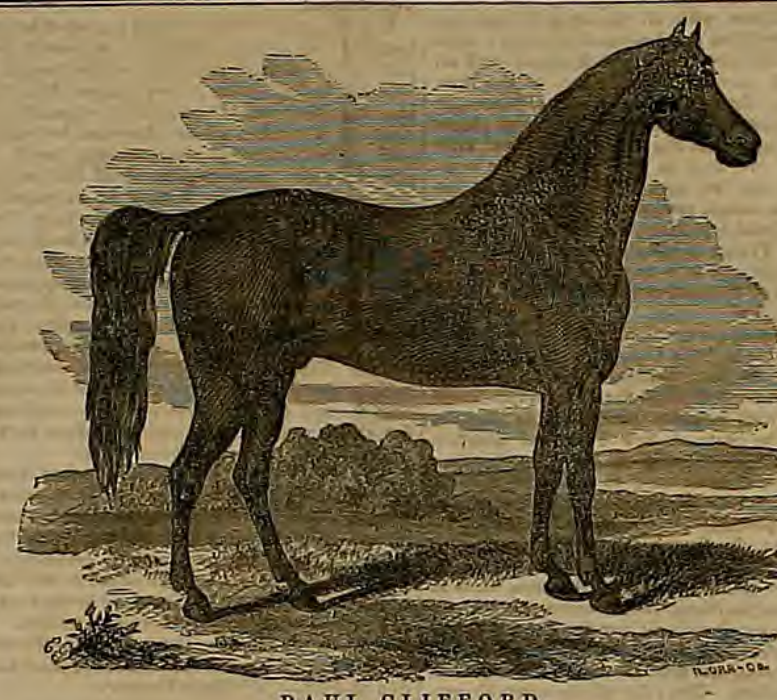
The method of plowing the land in Norway appears singular, and is quite absurd. "The whole of the field is plowed quite flat, not gathered into ridges, which is an error; as the surface water, not finding an issue, sours the land, and retards the seed. A still greater disadvantage is that the plow, not being a turn-wrest one, returns empty to the place it set out from to begin each new furrow. The plowman does not make a fresh one in coming back, but trails the empty plow on its side to the head of the field. He requires, consequently, just double the time to plow an acre that we take."

Some portions of their harvest work also appear singular, but are more rational, and may be necessary in that country. "For every ten sheaves, a pole of light, strong wood, about the thickness of the handle of a garden rake, and about nine feet in length, is fixed in the ground by an iron-shod borer (It costs almost nothing). A man sets two sheaves on the ground against the stem, and impales all the rest upon the pole, one above the other, with the heads hanging downwards. The pole enters before the band of each sheaf, and comes out at the bottom. The sheaf is put on with a pitchfork; and a whole field is picketed in this way with the greatest ease, as soon as it is cut. When sufficiently dried, a sledge or car on low wheels comes along to the pole, which is lifted with all its sheaves and laid into it at once; and each pole, when in the barn, is a tally for a threave of ten sheaves."

But the most interesting portion of their husbandry is their irrigation, in which we would do well to imitate them. "The extent to which irrigation is carried in the glens and valleys shows a spirit of exertion and co-operation, to which Scotland can show nothing similar. The greatest exertions are made to bring water from the head of each glen, along such a level as will give the command of it to each farmer, at the head of his fields. This is done by leading it into wooden troughs from the highest perennial stream, among the hills, through woods, across ravines, along the rocky, often perpendicular sides of the glens, and from this main trough giving a lateral one to each farmer in passing the head of his farm. He distributes this supply to movable troughs among the fields, and in the summer season waters each ridge successively with scoops, like those used by bleachers in watering cloth, laying his trough between every two ridges."

The manners of the people are simple, affectionate and easy; and I am sorry that I have already occupied so much space, that I cannot think of making a single quotation in regard to them. Let me, however, make one more, descriptive of a *Fiord*, or that singular species of armlet of the sea which is so common in Norway. "The little land-locked bay is so shut in with rocks and woods that it resembles a small mountain lake. The entrance is hid by trees, and the mark of high water at the head of the cove is the only indication that it belongs to the ocean. There is generally room at its head for one fishing farmer, with his house at the foot of the rocks, a green spot for his cows and goats, and his little skiff at anchor before his door; where the lucky fellow, without ever knowing what a sea-storm is, or going out of sight of his own chimney smoke, catches in his sheltered creek the finest sea fish, beneath the shadow of the rocky forest that surrounds him. When the traveler drops suddenly upon one of these nooks, his toil in scrambling up and down the rocks is repaid."

The population of Norway is over one million; who form, according to our author, about the happiest and most comfortable peasantry in Europe. May God continue to bless them! AGRICOLA.



PAUL CLIFFORD.

WE present another specimen of the Morgan Horse, as figured in the work upon that animal, published by C. M. Saxton & Co., to which we referred last week. The pedigree of this animal is as follows: Was foaled in 1843. Sired by Black Hawk; g sire, Sherman; g g sire, Justin Morgan. Dam by Young Hamiltonian. He by Bishop's Hamiltonian, and he by Imported Messenger. Grand dam by Leonidas, an imported horse. Color, mahogany bay, 15¼ hands high. Now owned by Messrs. Hunsden & Wilcox, of Oswego, Tioga Co., N. Y. He is a very fine horse, and received the first premium at the National Fair, Springfield, Mass., in 1854.

Valuable Implements.

WE have seen the Gang Plow offered at S. L. Palmer's Agricultural Warehouse, San Francisco. It is undoubtedly one of the best implements now used. Farmers should always remember that the *best tools* are the cheapest; and how much depends upon a good plow. One proof of the excellence of this implement is, that Mr. Palmer sells the plows as fast as he can make them.

The Patent Thermometer Churn, of Mr. Palmer, is now esteemed one of the best in use. There are three sizes—eight, twelve, and sixteen gallons—and they sell at $12, $14, and $18, at retail. These churns are with *working thermometers;* the ordinary ones, imported, do not work well. It is pleasant, also, to know that these two articles are of California manufacture.

We call attention, once more, to the valuable Cultivator made by Messrs. Beeching & Post, 35 Pine street, San Francisco. We have seen parties that know how well they work. The cultivator was tested near the Mission Dolores. John Center, Esq.; S. L. Palmer, Esq., of the Agricultural Warehouse; A. B. Southworth, Esq., of Southworth & Co.'s Agricultural Warehouse, and others, can attest to the value of this implement, and they accord to it the highest praise. We hope those who need will go and see it. Messrs. B. & P. deserve well for their excellent invention.

Another excellent implement (for we suppose we may call a beautiful wagon an implement) we saw at J. L. Ottignon's Carriage Factory on California street, in the shape of a splendidly finished Express Wagon, and we feel confident it could not be excelled in the United States. Mr. O. has made several, and we should think our dairymen, marketmen, and all carriers, would go and see this specimen wagon, and order from home manufactore. This would encourage, and this is what we need to do, to secure prosperity:

☞ Encourage Home Industry.

The May Queen Washer, that unique Washing Machine which obtained the Premium at the State Fair, is now being manufactured in quantities at San Francisco, the Patent Right for the county having been secured by Mr. Ames, on Washington street, and we advise all good housewives to notice them.

AMERICA! HER GLORY AND HER SHAME.—This most excellent, truthful and spirited composition, which is found in our columns, is by one of the young ladies of the Benicia Seminary, and reflects great honor upon her head and heart. Well may parents be proud of daughters that shall think and write thus; for when called to take part in active life, their influence must be felt for good. We rejoice to see such an influence emanating from our institutions of learning. It bespeaks a glorious future for California.

To Farmers.

THE annexed very able editorial we take from the New York Tribune of December 27, 1856, and we lay it before our readers as an evidence of the value of agricultural knowledge to a farmer. It is important that the cultivator of the soil should not only be familiar with the science as practised in his own country, but in all countries, and thus extract all the practical good he can from each:

That the great mass of the farmers in the United States are an intelligent class of people, may hardly be doubted. In this respect, they will compare favorably with the cultivators of the soil, as a class, in any other portion of the globe. Yet that they cultivate this land with a skill at all commensurate with their general intelligence, is quite another thing. In that regard, they are vastly behind their collaborators in most of the leading States of Europe; the aggregate annual production of the American farm makes a very poor appearance when compared with that of the European.

For some part of this defect, our farmers are not to be blamed. They lack the capital accumulated in Europe through hundreds of years of cultivation. But for much of this bad and unprofitable farming, they should be held responsible. The first great evil, on this head, is in the desire to own large farms, without the necessary capital to secure good cultivation. The next radical defect is in not properly understanding the true principles of their business; for agriculture is based upon certain unerring and unchanging laws, easy to understand and simple to follow. Yet, if disregarded, or but indifferently carried out, the business becomes impoverishing, both to the soil and its owner. For the purpose, therefore, of reforming these shortcomings, and teaching the laws of Plenty, we shall now be axiomatic and particular, as follows:

The experience of ages has demonstrated this truth: That no system of agriculture worthy a civilized people can be permanently prosperous when the value of the annual animal product of the farm does not equal that of the vegetable product. When the vegetable product is greater in value than the animal, the condition of agriculture will be found unsatisfactory and the country poor. The cause of this is simple. The main reliance of the farmer for means to ameliorate the condition of his soil, to maintain and increase its fertility, must ever be upon the manure made by the domestic animals which are kept upon his farm. Any and all other schemes for keeping up the fertility of the soil over all the country will end in disappointment and serious loss.

In no part of Europe is agriculture so prosperous as in Flanders, and portions of Holland. And any American farmer who has traveled through those countries, could not help being astonished at the large number of animals which are kept, and the quantity of grain which is produced upon a farm of ordinary size, or what would be called so here. We give a single instance, by no means rare, except that the quantity of the land is larger than the average of Flanders farms, being about one hundred and thirty acres. About one-fourth was in permanent pasture; the remainder arable, of which thirty acres were in wheat, ten rye, fourteen oats, fourteen clover, ten flax, twelve colza, three beans, three barley, and six potatoes—or one hundred and two acres, eighty-eight in crops. The stock of this farm consisted of seventeen cows, five calves, five heifers, nine cart-horses, and three colts—thirty-nine head in all. Everything grown upon the farm was consumed upon it, except the wheat, flax and colza, or rape-seed. The wheat averaged thirty-five bushels to the acre. And now for his secret: His urine cistern is twenty feet square and seven feet deep, and considered much too small, though there was another under his manure pile in the yard. The urine cistern is an indispensible adjunct to the farm; it is found throughout all the Low Countries. Sometimes it is only a tub or a hogshead sunk in the ground upon the small farms of three or four acres, while upon the larger ones it is of a capacity for thousands of gallons.

But, leaving those old countries, whose agriculture has been for centuries in advance of all the rest of Europe, let us turn to England and France, and contrast the results of their different systems of agriculture. England has no advantages in soil or climate which France does not possess. On the contrary, France can easily produce all that England does, but has many advantages in her wine, tobacco, Indian corn, oleaginous and textile crops, over England. The whole British Islands contain sixty-two millions of acres, and support thirty-five millions of sheep. France contains one hundred and six millions of acres, and supports the same number. In proportion to its acres, France should sustain sixty millions of sheep. But, if we compare England proper with France, the difference becomes still more striking. England proper, on her thirty millions of acres, supports thirty millions of sheep, or one to each acre, while France devotes three acres to each sheep.

During the past eighty years, France has done comparatively nothing to improve her sheep except to import the Merino from Spain. She has neither improved her breeds nor developed their size or weight. Wool has been her primary object, and not meat. England on the other hand has made meat, rather than wool, the primary object. So successful has she been in that particular, that her sheep average, in net weight of meat, eighty pounds each, while the French sheep average but forty pounds each. England slaughters of her flock ten millions annually, giving her people eight hundred millions of pounds of meat. The French sheep not being precocious, France slaughters annually eight millions, giving but three hundred and twenty million pounds of meat. Allowing the meat to be equal in value, though it is claimed that the advantage is in favor of the English sheep, we find that the return from a sheep-farm in England is six times greater than that from a French farm of equal area.

In respect to cows, France possesses four millions and Great Britain three millions. The French work their cows and inure them to labor, so that they become a strong, hardy race, but lose their best milking properties, and at least one-half are not really milk cows, while all the English are. England gets double the milk from her three millions of cows that France does from her four millions. Owing to the number of manufacturing towns and cities with which England is crowded, the farmer sells his milk for four cents the quart, while the price of milk in France is only two cents a quart; and this is an important and significant fact for the consideration of the American farmer. But while the French farmers gain annually $20,000,000 as the product of four millions of cows, the English farmers make $80,000,000 as the product of three millions.

Great Britain supports eight million head of cattle, of the most improved breeds—perfect animals, fed and developed so as to yield the greatest weight of butcher's meat at the earliest age, and killed at the precise period when the animals have reached their maximum growth. France supports ten million head of unimproved breeds, many of them kept to an age when growth has long ceased, and when the food consumed no longer contributes to their growth; and many of them killed as calves, at an age when growth is most rapid. Great Britain slaughters annually two million head of cattle, of an average weight of six hundred pounds; France slaughters annually four million head, of an average weight of two hundred and forty pounds.

Without further details, comparing the total production of the two agricultures, it will appear that, while France as a whole produces ten dollars an acre, England proper produces twenty dollars. The annual animal produce alone of an English farm is equal to at least the total produce of a French farm of equal area, all the vegetable product being additional. Comparing the wheat raised in France with all its acres, it does not average more than two bushels to the acre; comparing all the wheat raised in England with all its acres, it averages four bushels to the acre. Taking the three principal kinds of domestic animals, sheep cattle and pigs, the English obtain four times more than the French do in meat, milk and wool. We find, as the result of the comparison of the two agricultures, that while the value of the animal produce of England is greater than its vegetable produce, the value of the animal produce of France is less than one-half the vegetable produce, and as a consequence we find the agriculture of England rich while that of France is poor.

We now propose to examine the agriculture of our own State and the Union, to see how it compares with the last mentioned country; and in doing so we are compelled to rely upon the Census of 1850, which in many particulars, is very defective. The State of New York had nineteen millions of acres in use, one-third being unimproved. She had six acres to one sheep, and the average net weight of the carcass would not exceed forty pounds. As our sheep husbandry assimilates to the French, the annual product of meat would be but thirty-six millions of pounds, or only two pounds of meat to the acre, while in England proper it was twenty-seven pounds. Of wheat, compared with all our acres, we obtained three-fourths of a bushel from the acre. The value of the animal product was thirty-four millions of dollars. The value of the vegetable product, exclusive of hay, was forty-eight millions; including the hay crop, it was sixty-six millions of dollars, or nearly double the value of the animal product.

The land in use in the United States was three hundred and ninety three millions of acres—about three-fifths being put down as unimproved. There was one sheep to fifteen acres. The annual product of mutton would be but two-thirds of one pound to the acre. Compared with France, we ought to have one hundred millions of fine-wooled sheep, yielding annually one thousand millions of pounds of meat. Compared with England, we should have three hundred millions of sheep, yielding eight thousand millions of pounds of meat. But we are aware that the population of the United States bears no proportion to the land in use, compared with either England or France; yet these very figures demonstrate that we have vastly more acres in use than we can profitably cultivate, and that this uncultivated land is a positive loss to the individual and to the nation. Comparing all the wheat product with all the acres in use, and the yield was one bushel to three acres. The whole value of the vegetable products, including hay and cotton—which were of nearly the same value—was $800,000,000. The value of the animal product was $330,000,000. The agriculture of the United States produced about $4 to the acre, and that of the State of New York $6 to the acre. It is true that this comparison does injustice to portions of the Union; but as the object was to make the contrast between great nations, we have made the comparison accordingly. The lesson taught hereby is a most important one to every farmer or planter in the land. It is this: No farmer can be permanently prosperous who does not bring his farm and his live stock into such a condition and into such a relation to each other that his live stock shall be in proportion to the number of his acres, and in such a proportion that his animal produce on the farm shall be at least equal to the vegetable in value. Let every farmer ponder well this law, and follow it, for upon its observance depends his prosperity. Its careful observance is the foundation of all improvement in agriculture.

First Crops for Improved Marsh Lands.

IN the December number, there was published a letter asking for information as to what crops were likely to prove most profitable on a piece of redeemed marsh. There are two objects to be kept in view in cultivating such a piece of land; first, the immediate growth of a profitable crop, and next the steady improvement and amelioration of the land. The marsh when drained, is not by any means fitted for the growth of crops of high value. It is still raw and very rough. The surface soil which is generally turned up with a broad thin furrow, is composed solely of the vegetable matter deposited from the coarse grasses, and the water plants, which were natural to the marsh when saturated with water. As yet the surface is of a peaty consistence, it has not been mellowed by exposure. Besides this, the surface is not smooth. The lumps and tussocks, and small heaps have not yet been leveled, for a single plowing will not permit this to be done. If the design is lay the marsh down to permanent meadow, it is all important that the surface should be made as level as possible. To effect this with economy, we incline to that practice which makes a crop of oats first to be taken from a piece of reclaimed marsh, and then following it with corn, to be succeded if possible by wheat the same season. The crop of oats would serve to kill off and keep under the wild grasses, and at the same time mellow the thin raw green sod of the first plowing. After the oats are taken off, a plowing in the fall, to the depth of seven or eight inches, should be given to the stubble, and if a coating of lime, of fifteen or twenty bushels per acre, can then be given, the next year's crop will amply repay the expenditure. Lime is of great service in such a soil, as it serves to neutralize the acid with which the soil is apt to be overcharged, and likewise acts mechanically in converting the vegetable muck to a soil of loamy character. This lime will also have a most excellent effect on the succeeding crops. The crop of corn being taken off, we would burn the cornstalks in the field, and harrow in the ashes; this would be more necessary, if no lime were applied the previous year. The reason why the cornstraw should be burned, is that a crop of oats followed by one of corn, another of wheat, and then grass, would leave the soil too much exhausted of the material necessary to grow a firm, stout, healthy straw, and without a stout straw, a full crop of wheat cannot be had. These three crops managed in this way, with a thorough attention to their cultivation, and particularly to having the work of plowing, harrowing and seeding well done, would for the three years next succeeding the reclamation of the marsh land, repay the owner for all or at least a large proportion of the outlay occasioned by the making of the requisite drains. In cases where the condition of the soil would permit it, corn might be made the first crop; the labor of hoeing such a sod thoroughly, however, renders the crop an expensive one. Again, it must be borne in mind that some marsh lands are totally unfit for the growth of wheat, because upon them the straw is so liable to be blighted by rust. The lime would aid in curing this, but still where only a vegetable muck prevails, there is great risk with a wheat crop, even when such land is well drained.

It is frequently the case that a crop of broom corn is found a very profitable one on such a piece of marsh land, especially where enough of help can be had at the proper season. Potatoes also are often found profitable, especially if close to a market where they can be readily sold. The choice in such matters must be guided by due consideration of all the circumstances by which the farmer is surrounded. One point is certain, that those who have been most successful in improving marsh land, invariably have recourse to oats as the crop with which to subdue the sod at the least expense; and we find that this practice is also the most general in Scotch and English husbandry. Last year we perceive that a gold medal was awarded by the Highland Society, for the successful reclamation of a large piece of peat moss, and oats formed the crop which was taken from it for three years in succession, before it was thought fit to be seeded for meadow.

The question may also arise, whether it may not be more profitable to carry out a series of rotations upon such land, rather than to devote it entirely to the growth of grass. Away from a market for hay, the growth of grass implies the feeding of stock, and the question will arise whether a wheat or a corn crop every four or five years would not pay better than hay. In laying out the plan for the treatment of marsh lands, all these several considerations must have due weight.—[Michigan Farmer.

On Breeding.

THE choice of a sire and dam is a point of the utmost consequence in breeding horses (or, indeed, any other animal), as the offspring will be found, in almost every instance, to inherit the qualities of its parents; peculiarity of form and construction is inherent and descends from generation to generation. Hence the necessary attention to those niceties which breeders are often apt to forget. Nor is it sufficient that one of the parents be good, and the other indifferent; for the perfections of the sire may be lost through the deficiences of the mare, and *vice versa*.

In the selection of a stallion many things should be observed. The hight should depend on the occupation the foal is destined to fill. The legs should be particularly examined, and disease should pervade no part of the system. Fat, heavy horses, with thick legs, and coarse, unseemly heads, should always be avoided. Horses should be free from specks on the eye—partial or total blindness. Temper is an essential point, for vice is sometimes hereditary. Stallions that cover too many mares in a season, in the latter period produce weak offspring.

As regards the mare, it is well known that the dam contributes more to the integrity of the offspring than the sire. It is essential that she be in full possession of her natural strength and powers; the vigor of the constitution determines much in favor of the foal. It is a great error to suppose, that a mare that has once been good, and capable of great exertion, should, when old, and no longer fitted for work, produce offspring equally efficient as when in her prime: the foal will certainly inherit some of the weakness of the present nature and broken down constitution. Mares should never be put to the stallion until they have arrived at maturity, which takes place about the fifth year. Mares are bred from earlier, but it is a bad practice, for strength and beauty are absent; and thus not only is the dam rendered inefficient sooner than in one that is allowed to come to maturity, but the foal can never be expected to be either healthy or strong in constitution. The period of going with foal is eleven months: after the sixth month, great care and gentleness should be exercised towards them; moderate exercise is essential; hard work in harness, over bad roads, is likely to produce abortion; and mares that have once aborted are very liable (if the same causes are in operation) to a recurrence of the same.

The proper time for copulation is when there is a whitish fluid from the vagina. She neighs frequently, and exhibits great desire for the horse; when she has conceived, she shows no further desire, and the discharge from the vagina stops.

Some writers recommend the mare to be put to the stallion early after foaling: this is improper, for the simple reason that the dam has to nourish two, viz: the foal and the embryo; this is excessively weakening, and liable to weaken one or the other.

Disproportionate copulations are also bad, as a large horse and a small mare: the size of the horse should be produced by gentle graduations, and this is evidently a better way to arrive at beauty as well as strength.

The best method of preserving the breed and making improvements, is to make selections of the best on both sides. Much judgment and circumspection is necessary at all times in crossing the breed; and many errors arise in consequence of a want of knowledge in the breeders.

When the period of foaling draws nigh, the mare should be separated from the other horses. Having foaled, turn her into a fine pasture, where there is a barn. The foal may be weaned at six months. If the foal dies, or is taken away from the dam, humanity would suggest the propriety of a few weeks' rest, to enable the animal to recover from the effects of parturition.—[Am. Vet. Journal.

Bee Culture in Russia.

THE rearing of bees is extensively carried on in the several parts of European Russia, particularly in the central and southern governments, as well as in the Polish and in the trans-Caucasian provinces. This insect acclimatises up to a very high latitude, even in Siberia. It was long thought that the climate of the latter country was utterly unsuitable for the rearing of bees; but experiments made at the commencement of the present century in the governments of Tomsk, Omsk, and Jenisseisk have proved the contrary. It has greatly suffered, however, in some provinces, from the destruction of the forests; for the bee prefers well-wooded districts, where it is protected from the wind. The honey procured from the linden tree (*Tilia europæa*) is only obtained at the little town of Kowno, on the river Niemen, in Lithuania, which is surrounded by an extensive forest of these trees, and where the rearing occupies the principal attention of the inhabitants. The Jews of Poland furnish a close imitation of this honey, by bleaching the common kinds in the open air during frosty weather.

The ceremonies of the Greek church, requiring a large consumption of wax candles, greatly favor this branch of rural economy in Russia, and preserve it from the decline to which it is exposed in other countries, from the increasing use of stearine, oil, gas, and other fluids for illuminating purposes. The peasants produce wax so cheaply that, notwithstanding the consumption of this article has greatly diminished abroad, it still continues to form an important item of the commerce of the country; but the exportation of honey has considerably increased in consequence of the extended use of potato sirup, which has also injured the honey trade in the interior.

The rearing of bees is now almost exclusively dependent on the manufacture of candles for religious ceremonies, and on the consumption of honey during Lent, it being then used instead of sugar, by the strict observers of the fasts. The government encourages this branch of rural industry, as affording to the peasant an extra source of income, and has adopted various measures for the accomplishment of this end. With the view of diffusing the requisite knowledge among the people of the public domains, bee-hives, and a course of practical instruction upon the subject of bee-culture, have been established at several of the crown farms, and pupils are sent every year, at the expense of the government, to the special school in Tschernigow, founded for the purpose, in 1828. After having finished their studies, the pupils, quitting this establishment, may become teachers in the schools dependent on the Ministry of Domains, or carry on the business of teaching on their own account. They enjoy a temporary exemption from military service; and such of them as wish to establish hives for themselves obtain loans for the purpose from the Department of Rural Economy. By way of further encouragement, the Ministry of Domains has granted permission to the peasants to establish hives in the crown forests, under the precautions necessary to prevent the occurrence of conflagrations.

The total production of wax in Russia is estimated at 5,412,000 pounds per annum; and, as the usual calculation is three pounds of honey to one of wax, this supposes a production of 16,236,000 pounds of honey, the whole being valued at $2,250 000.—[D. J. B., in Patent Office Report for 1855.

The Best Hens for Laying.

A correspondent of the Country Gentleman, furnishes the following statement of the qualities of several varieties of fowls, for producing eggs, and more particularly of the Black Spanish and Leghorn Breeds. He says: I have kept the two above named for some time, as well as a number of other varieties, but find none to equal them in the quantity or size of eggs, rarely evincing a desire to sit, in fact none of my Leghorns have ever shown that desire. Last spring I confined three hens and one cock of the following named varieties, each quartered in a separate inclosure, and for seventy-two days kept an exact account of their performances, which were as follows, beginning Feb. 17, and ending April 30:

Leghorns laid	122	eggs;	no disposition	to sit.
Spanish do	103	do	do	do
Black Polands	83	do	do	do
Gold do	66	do	do	do
Gray Dorkings	65	do	all sitting	April 15.
Cochin Chinas	43	do	do	March 13.

Another correspondent also adds his testimony as follows:

"I am satisfied from my own experience, as well as the information I receive from friends who breed Leghorn fowls, that for laying they are superior to any other variety. They do not attain so large a growth of body as some other kinds of fowls, and for this reason may not be so desirable for the table; their eggs, however, are of a very fair size.

"I have imported several direct from Leghorn, and have never known one of them to manifest a disposition to sit, and am compelled to secure the services of a hen of some other breed to hatch their eggs.

"Strange to say I have never seen the Leghorn fowl noticed in any treatise on poultry which has come under my observation. It may possibly be classed with the Black Spanish, as it resembles them in many particulars, although I am disposed to consider them distinct species.

"I have had experience with most, if not all, varieties of domestic fowls, and have no hesitation in placing the Leghorn breed before any other, and I think were they substituted for the present generation of fowl, the egg crop would be increased at least fifty per cent."

FEEDING HORSES.—"Your remarks in relation to the amount of hay and grain, which a horse will consume per day, have attracted my attention. The actual amount of food consumed by a horse will depend upon his form and disposition. I have found that horses of a compact form and quiet disposition, weighing about 1200 pounds, and exerting a force equivalent to moving 150 or 200 pounds at the rate of two miles per hour, for ten hours per day, and six days in the week, will require each twenty pounds of oats, fourteen pounds of hay, and seventy pounds of water, with a comfortable stable, and to keep them in good order. Then also much of the condition of the horse will depend on his having a driver who knows how to use him without harshness.

"This is the conclusion I have arrived at after thirty years' experience, with a great number of horses on my hands the most of the time. The cost of keeping horses for farm work is expensive, when compared with the cost of keeping oxen or mules."—[Com., in Mich. Farmer.

EGYPTIAN WHEAT.—During the seven years foretold by Joseph in the land of Egypt, "the earth brought forth corn by handfuls" (Gen. xii., 47), "seven ears on one stalk" (ibid, ver, 22). It is not said certainly, that this was wheat; but its description exactly corresponds with the *Triticum compositum* at present cultivated in that country, and also with the *mummy wheat*, discovered in a sarcophagus in the Egyptian tombs, which had probably lain there for more than 3000 years, but which when planted vegetated, and has afforded us a new variety of that grain. I have some ears of this now before me, exhibiting the same phenomenon of "seven ears on the stalk." This wheat is made into Colne flour, and the London bakers use to dust the kneading boards. Thus we have the fact distinctly brought before us, that the wheat of that period possessed features in common—allowing for the changes effected by differences of soil, character, and cultivation—with that of the present day.—[Mark Lane Express.

Address of President Wilder at the National Fair.

WE feel it due to one who has done so much to promote the cause of Horticulture as has the Hon. M. P. Wilder, to give his valuable opinion and counsel as expressed in his very able address which we now lay before our readers, and we hope that before many years we shall have Festivals of the same character in our State:

PHILADELPHIA, Friday, Oct. 10.

There was a very large attendance at the National Agricultural Fair to-day, numbering thirty to forty thousand persons. The principal attraction was the racing on the course, which was very spirited. The grand banquet came off at 2½ P. M., when eighteen hundred persons, including two hundred ladies, sat down.

Among the invited guests were Bishops Potter of Pennsylvania, and McCloskey of Michigan, who pronounced grace and returned thanks before and after the meal.

The tables filled an immense tent beautifully decorated, and bountifully supplied under the direction of Mr. Jones of the Exchange Hotel.

After the edibles had been disposed of, President Wilder made an address, as follows:

Fellow-citizens and Friends of Agriculture:

Amidst these congregated thousands, assembled from various States of our Confederacy, and from foreign lands, amidst this array of intellect and learning from all ranks and professions, and in the presence of this galaxy of beauty and taste, my voice can be of little moment, except as the medium of communication between you and those I have the honor to represent.

In behalf of the United States Agricultural Society, and of those by whose invitation and liberality we are here convened, I extend to each of you a most cordial welcome. Welcome to the present blessings and glorious hopes of American Agriculture, the parent and conservator of American freedom. (Applause.)

Eighty-one years ago, in this city of brotherly Love the Fathers of our Republic planted the tree of Liberty, beneath whose genial shade we repose, and of whose fruit we now partake. Their mission was to proclaim political independence; ours to secure to the tillers of the soil the blessings of that independence. Seventy-one years ago a noble band of those patriot sires established the first Agricultural Society on this continent in this city, endeared to us by the most hallowed associations, all of which conspire to render it a most appropriate place for this great national jubilee. (Applause.)

The purpose of this Society is to carry out and to consummate the designs of those venerable men—to bring together the choicest productions of art and science, of industry and enterprise—to awaken and sustain a more general interest in all the departments of husbandry—and, above all, and over all, to unite by a band of common fellowship and friendship, the yeomanry of all sections of our beloved land. (Rapturous Applace.)

It is our happy lot to live in a period of high and progressive civilization, distinguished by events superior to those which make up the history of the Pharaohs in Egypt, of the Selucidæ in Syria, or the Cæsars in Rome—a period when individual and national character forms with amazing rapidity, and the work of former centuries is transacted in a few days.

We live, too, in a country the vigorous growth of which readily adapts itself to this active age—a country of stupendous proportions, extending from ocean to ocean, containing vast fields for human development and happiness, embracing nearly every variety of soil and climate, actually producing or capable of being made to produce sustenance for its rapidly reduplicating millions, if not for more people than now inhabit the globe; a country, whose thriving cities, springing up as by enchantment, suddenly surpass in the arts and sciences, in manufactories and commerce, the most renowned cities of antiquity, whose free institutions, civil, literary and religious, attract the attention of all other nations, and whose inhabitants, from every part of the world, are assimilating and commingling into a race more powerful than any which has preceded it. These and similar considerations show the importance of one cause, and the mission which the All-wise and Infinite has asigned to the United States of America. (Applause.)

The lively interest manifested in this exhibition, and the great concourse of persons attending it, afford ample evidence of the high esteem in which Agriculture and the Rural Arts are held. It will have been witnessed, should the pleasant weather continue, by more than two hundred thousand people, and it has been pronounced by competent judges, the most interesting ever held on this side of the Atlantic. (Applause.) The number of entries has been very large. In stock, it has embraced some of the finest specimens of the different breeds, which this or any other country afford. The latter, with the display of implements and of the productions of the soil and the arts, reflect great honor upon the contributions and the Society, upon this city and the country.

For the means and agencies which have secured the complete success of this exhibition, we are indebted to the municipal authorities of this city and to their fellow-citizens, for their polite invitation and their large hospitality—to the gentlemen whose liberality provided the guarantee for the security of the enterprise against failure—to the Philadelphia Agricultural Society for their encouragement and co-operation—to the superintendents, marshals and local committees, for the energy and fidelity with which they have discharged their arduous duties—to the contributors, for the promptness with which they have responded to our call, in many instances at great risk, expense, and personal inconveniences—to the judges for the judicious manner in which they have fulfilled the difficult and delicate trust confided to them. Our chief regret is, that our limited resources constrained them to suffer so much excellence to pass unrewarded.

We are also under especial obligations to the various Agricultural Societies, for the large and respectable delegations with which they have favored us—to our honored guests, for the encouragement which their presence has afforded us and the cause we seek to advance—and last, though first in our affections, to the ladies, who, following in the footsteps of their illustrious and common mother, have lent the enchantments of grace and beauty to this primitive pursuit of man—a pursuit worthy of their purest devotion and suited to their most refined and cultivated taste. (Applause.)

Ladies and gentlemen: there are themes of thrilling interest connected with the subject of American Agriculture, but that on which my heart is fixed, and which it holds most dear, is its power to conserve whatsoever is most peaceful, salutary, and hopeful, in our happy land. I allude to its tendency to give regularity and healthfulness to the pulsations of the national heart; to quicken the tide of living sympathy

and friendship which should flow through every part of the body politic; to bind together in one great circle of life and love these kindred associations and States; to make and to keep them one in affection, in interest, in inheritance, and in glorious destiny, a happy, prosperous, free and united people, whose example of union and strength, of liberty and justice, of self-government and progress, shall be the admiration and wonder of the world. (Great Applause.)

In conclusion, permit me to offer you a toast as expressing the sentiment of the Chair. I give you—

"Our Union"—The thirty-one farms of the Western Continent.

"A union of lakes and a union of lands,
A Union which none may sever;
A union of hearts and a union of hands,
Round the flag of our Union forever."

(Great Applause.)

Speeches were also made by Gov. Pollock, Mayor Vaux, Gov. Price of New Jersey, G. W. P. Custis of Virginia, Josiah Quincy Jr. of Boston, A. B. Conger of New York, and Wm. W. Meredith.

The premiums were then declared.

Chinese Testimony.

The following address, which has been sent to Gov. Johnson, is worthy the attention of all who have the good of California at heart. Living as we do under the blessings of our free institutions, we profess to throw open our country as the asylum of the oppressed of all nations, and invite them to come and dwell with us, promising to give them our protection, and asserting in the words of the great *Magna Charta* of human liberty, that all have "certain inalienable rights," that they shall be protected in life, property and estate. We believe that the course pursued in relation to the Chinese is not only in violation of this pledge, but the most unwise policy that could be adopted, in relation to a class of people that seem to be sent to us providentially for the advancement of our State, and we, as a people, should see this and act wisely. While we protect them in their rights, we should encourage their efforts to labor and become good citizens, for it must be plainly perceived that ere long we shall be growers of Rice, Tea, the Sugar Cane, the Mulberry tree, and, as a consequence, manufacturers of these products, and hence the Chinese are to be the laborers in these great branches of California industry and California wealth.

To this end we are rapidly hastening, and if our government is wise, we shall lay aside all national prejudices, all sectional feelings, all political differences, and, as a people, knowing no North, no South, no East, no West, as true Californians legislate for California, labor for California and her interests as one man, and strive, in the spirit and bond of true men, to call into life and being, into action and light, the vast and untold wealth of our State, that as yet lies dormant, but which by earnest, energetic, patriotic effort shall ere long make California, as has been prophesied, the "Glory of the Thirty-one States."

We ask a careful perusal of this able and truthful address:

To His Excellency J. Neely Johnson, Governor of the State of California:

Pardon the liberty I now have taken in thus addressing you, as I make no doubt but you will when I explain my reason for so doing.

On Jan. 29th, a terrible affray took place in the township of Montezuma, three miles distant from here. Four American citizens and five Chinese came into collision, in which each of the Chinese had his skull fractured. One of the Chinamen died on the 31st ult.; two others are not expected to live; whilst the remaining two are so much disabled, as to prevent them from working for some time to come.

Now, the causes of this affray I will faithfully describe: On the 28th of May last, the said Chinese purchased the claim whereon they were working, from a miner named William Smith, who gave them a certificate of the same. From that time they held peaceful possession of it until it was wrested from them on the day of the fray. When the four men who took from them the claim, commenced removing the Chinamen's sluices, the latter persisted peaceably (so they say) in preventing them, they were instantly pounced upon by the intruders and brutally mangled in the most shocking manner. The screams of the sufferers aroused the people in the neighborhood, some of whom went to the spot where they saw the Chinese with mutilated bodies and covered with blood—a shocking spectacle to behold! The parties were instantly arrested, and brought before Mr. Parkes, the magistrate of that township, who had to dismiss the case, for want of evidence, on account of Chinese testimony being invalid.

I suppose that your Excellency is well aware, through the accounts of the public prints, how this people have been treated. The outlaws of the country have openly planned and perpetrated the most fearful outrages upon them. The law seldom took hold of such, or when it did, it was, in general, to extort exorbitant sums of money, under false pretences of rendering them justice, or of irritating vagabonds to commence new depredations. Their lives have been destroyed, their property plundered, and all manner of exaction and violence has been practiced upon them. To all these barbarities they had to submit; they had no voice that could reach your ear, but had to submit to the degradation.

But for some time past, it has become the custom of many to take the law in their own hands, and disregard the statutes. The imbecility of the officers who administered the law was, in many instances, the means of aiding, instead of abating the evil; and by that means gave freer access to the outlaws, to plunder them with impunity. The defects of the law in refusing their testimony has left them a prey to the wanton; whilst the terrible state of affairs caused thereby, prevented respectable citizens from checking the outrage, lest their existence should be blotted out by the ever handy revolver.

During my residence in China, and also in California, I often assured the Chinese that the principle of your government was to protect all people within its jurisdiction, and that it had benevolence to mankind at heart. From this, the Chinese have inferred that, in due time, you would grant them protection from the rapacity of the outlaws who ravage this State. But having waited for such for several years, without any amelioration whatever, they have come to the conclusion that it was directly opposite to what I told them, nor can I convince them to the contrary. I therefore pray your Excellency to take this matter into consideration, so that the amity that exists between this nation and China may be prolonged, and a better understanding betwixt us and them may be thereby brought about; so that this reign of terror would disappear, and happiness pervade the land.

As regarding the Chinese oath, many people think that it is not binding in its nature, from its outward forms being different from ours. But I assure you that the oath in the courts of China is looked upon as sacred as it is in ours. In this oath they swear by the Heavens and the Earth, the names of which they write on a piece of yellow paper and burn. In extreme cases, they cut off the head of a cock, intimating from such that they merit the same punishment should they perjure. Gutzlaff said that he "never knew the first instance of the violation of that oath." From this you can see that the oath in China is a sacred ceremony, and that good and evil do not exist in unison there, any more than in any other nation.

Having become wearied of applying for redress from the civil authorities after so many repeated times, I have thought it best to apply to your Excellency this time, hoping that you, in your honorable position, would do something towards their amelioration. If their testimony were admitted, and left to the discretion of the judge and jury to decide according to the circumstances connected with the case, it would put a check to the evils they suffer so much from, and bring about a better understanding between them and us, whilst it would add much to their moral progress, and bring tranquillity to all. By such means, mutual interests would be created, mutual civilities extended, and common sympathies excited between one and all. Harmony and prosperity would await us, and the day come around that each man would find peace in his own sphere of duty. California would thereby rise to an eminence of grandeur as far as she has sunk in the scale of degradation. She would become a blessing to all within her borders, and be blessed and honorable in the eyes of the world.

With many kind wishes,
I remain, yours truly,
JAMES HANLEY, Chinese Interpreter.

CHINESE CAMP, Tuolumne Co., Feb. 21, 1857.

Scribblings by an Old Californian.

The following interesting letter from an old Californian, published in the Fair Haven Tribune (Conn.), we feel we have a good right to clip and publish for the benefit of our numerous readers that will be glad to go back to the good old days of '49 and '50, and recall those scenes, that, though wild, strange and full of adventure and peril, were yet full of the deepest interest, and were surrounded by events of the most pleasing character—the recollections of which rise up now in the memory of old Californians like some bright picture that they love to gaze upon. There are many Sacramentans as well as San Franciscans, to whom the characters named in this letter will be like calling up friends, dear and familiar, and the mention of whose names will be like awakening the Genii of some fairy stories—for who does not remember one whole-souled creature that is named in this sketch? Who does not know Jack Scrant—"a friend in need and a friend indeed"?—the *slugs* were always ready, and many a heart was relieved by his generosity; but those days are laid away among those things that are passed—to us as the bright past—and to others too, those days, so happily noted by the writer, they were days we shall "never look upon their like again." Oh, how well can we remember many such a tramp as that mentioned, and how many a time we have awoke in the morning as Wash. did, washed and dressed as in those days.

We know our readers will be amused with this pleasing sketch of "Wash.;" we can guarantee it is all as recorded, for we know them well, as associations of nearly eight years, from early '49, make these events to us matters of familiar history. Jack Scranton, we believe, is now not a thousand miles from the White House, where all great men are gathering; and Wash., he is—he is active as usual, only he don't "sleep out o' nights," but within a happy home—is now a denizen of the Bay city of the Eureka State. —

My First Trip to the Mines.

On a hot sultry day in August, 1850, I started upon my first trip to the "gold diggings." I had been some time in Sacramento, but unlike most of my friends, had concluded to let well enough alone, and stay by the business I had first engaged in. At this time, trade being dull, I determined to gratify my curiosity, and at the same time visit some Fair Haven boys, who were mining at Dutch Dam, on the North Fork of the American river. My horse, one of the handsomest and best saddle horses in the country, belonged to my friend, Captain S., better known by his friends (and he has a legion of them) as "Jack Scrant," who had kindly offered him to me for the trip, with a great risk of his never seeing his animal again, for it was very easy to lose a horse in those days; for if they once got fairly away from you it was useless to hunt for them.

I left Sutter's Fort behind me, therefore, with some misgivings as to my returning, as well mounted as I was going. This celebrated Fort was two miles out from Sacramento then, but now is in the upper part of the city, or "up town." Five miles out I came to the Brighton House, quite a large and handsome hotel for those days (since burned down), and was a great place of resort for "fast men" in its day. From here my course was fifteen or twenty miles over a level prairie, with here and there a scrub oak, looking at a distance like apple trees. What a buoyancy of spirits and feeling of independence it engenders to be galloping over a new country, with no fences, hedges or ditches in your way, and right to pick your course over land as much your own as any body's else. My horse seemed to enjoy it as well, for he capered and reared at being held in, and would run off after cattle and other animals we came across, and I suppose wondered at my not throwing the lasso that was hanging at the pommel of my Mexican saddle; as he was a Mexican horse, and had been trained to catching wild cattle.

The first afternoon I rode about twenty-five miles and stopped at Hitchcock's; this was quite an old house, the family having settled there some time previous to the gold discovery. I had a feather bed assigned me, which was rather a rare article in the country (and is to this day), and after getting a good supper for myself and horse, retired to bed, but fatigued as I was by the ride and the hot sun, I could not sleep. My horse, there being no stable or yard, was tied in front of the house, right upon the road, for any body to take that passed by. I got up, went out and found him all right, with another horse tied by the side of him, belonging to an Ohio man I had passed upon the road the day previous. I told the man my trouble; he said I need give myself no further uneasiness, that he was going to sleep in his blankets on the bench in front, and would look out for them. His hailing from Ohio was guarantee enough to me for his honesty, and I went back to bed and slept at the rate of at least fourteen knots an hour. The next morning upon settling my bill, I was surprised to find the charge for my horse was more than for myself, notwithstanding he had not been quartered as well. His supper and breakfast cost enough to make it up. I had ordered for him barley, as much as he could eat, and the charge for it was seventy-five cents per pound, and they must have allowed less than the old rule, a pint a pound, at that.

I passed through several mining places, Mormon Island, Salmon Falls, etc., and late in the afternoon arrived at Dutch Dam, awful tired and hungry. The boys were just coming up from the river as I came over the brow of the hill, and immediately greeted me with a shout of recognition, but it was impossible for me to distinguish them from the strangers accompanying. It had been many a long day since they had been in the hands of a barber, and their harness would hardly have answered for a court dress. I was claimed as the guest of Hi B—— and Frank F——, and preparations for supper immediately commenced, which operation I watched with no little interest. Hi B— fried the pork, and Frank baked the bread in an iron kettle, by sitting it on the fire and heaping live coals over it; but devoting too much attention to my news, he let the bread burn to the color of charcoal, and I really believe I should have starved, had not Blair and Paul have sent us a large pot of beans from their camp. I thought it was the best supper I ever made, and shall remember the name of the cook as long as I live. They called him (a nickname I suppose) Amity Gory. I have since thought that in their liberality to us they must have gone supperless themselves. We were now in a quandary as to what we should give the horse. There was nothing in camp but some sour flour, and this was mixed into a kind of dough and set before him; but he snuffed and turned up his aristocratic nose at it. What could we do? the horse must be fed. At length a lucky thought happened to strike Frank. He said he would make him eat it, and immediately rushed off into the woods and came back driving a mule before him. These animals are not very dainty; anything to fill up does with them, and as soon as this fellow discovered the pan of dough he run his nose clear to the bottom of it. This indignity my pony would not stand, and rearing upon his fore legs, he hit the little mule a tremendous kick in the side, which laid him *hors du combat*, and hardly drew breath until he had "bolted" all the flour; the next day we went eight miles to Coloma, and bought some barley for him. After talking about our friends and their whereabouts, and singing "Old Folks at Home" over a whole bottle of whisky that cost three dollars, and would kill at three hundred yards, I inquired where I was to sleep. I saw lots of bush huts and tents scattered about and concluded one of them was ours, but it seemed my hosts had none. I was taken under a tree, where the dirt, a kind of brick dust, had been raked together, and on this some pine tops were spread, and this I was told was our bed. I had slept in the open air on the deck of a ship many times, but on shore never, besides, I knew that the nights in California were very cold. I inquired if there were dews, they assured me that they were very light. We turned in, all standing, with our boots for our pillows, and one of the boys each side of me to keep me warm, and give me the largest share of the blankets. In a very short time I was dreaming of "big lumps," "river washings," etc., and was awakened by the water splashing in my face, but found it was coming through a hole in the blanket, and the rain pouring down in torrents. I gave my bedfellows a kick to awaken them, but found by their smothered laugh that they had been awake for some time. I inquired if this was a specimen of their "slight dews." They were taken as much by surprise as myself. The winter season had set in early, and this was the primary storm; but we concluded to make the best of it as we were, for one night, and I went to sleep again, and never slept sounder in my life. Our toilet was very easily made in the morning, as we arose *washed and dressed*.

I started for home that afternoon, where I arrived next day safe, very much pleased with my first "prospect." I had *Wash*'d out a "big lump" the first day. I was informed a short time afterwards that the boys had moved to dry diggings and winter quarters. WASH.

A Curious Discovery.—Mr. A. J. Bell, of Kentucky, recently cut from the heart of a maple tree a something which had a nearly perfect human face, eyes, nose, mouth, forehead, chin, cheeks somewhat shriveled now, but which, when found, were plump and smooth. It is about the size of a goose egg, and is much the same shape, save where the smooth surface is varied by the outline of the features, and all of it, except the face, is covered by a substance remarkably resembling hair! It is unquestionably a fungus, and the wonder is the perfection of the face. Mr. Bell informs us that in the mouth, when found, were little white protuberances very like teeth, which were picked out by one of his children, who was of an inquiring turn of mind. Mr. B. is well known to some of our most respected citizens, and pledges his veracity that the fungus, which is fashioned in the similitude of a face (there being not only a general resemblance, but a cavity to the mouth, and nostrils connectiug with it, amazingly like humanity, was found in the heart of a tree which was cut on his premises, that was two feet in diameter, about three feet from the ground, in a small cavity, between which and the air on every side there was at least a foot of solid wood.—[Cincinnati Commercial.

Would Not Go.—A young enthusiast was talking to his intended a few evenings since, urging upon her speedy marriage, and a start to spend the honeymoon in California.

"I tell you," said he, his face glowing with enthusiasm, "California is the paradise of this earth. There's no use talking!"

"No use talking!" exclaimed the lady with surprise.

"No use talking," he repeated.

"Well, if there's no use talking," said the lady, "what do you want of women there? I don't go."

He left—but it is presumed he will be back.

CLOTHING, &c.

NEW STORE!

MANSFIELD & WOOD,
WHOLESALE AND RETAIL
CLOTHING WAREHOUSE,
Sole Agents for the Sale of
MESSRS. WYMAN & CO.'S
SUPERFINE CLOTHING,
159 AND 161 MONTGOMERY STREET,
Opposite Montgomery Block,
ARE NOW PREPARED TO OFFER THE LARGEST AND BEST ASSORTED
STOCK
EVER EXHIBITED IN CALIFORNIA,
COMPRISING
ALL THE LATEST STYLES
CLOTHING,
And every Variety of Superior Quality
FURNISHING GOODS.
ALSO,
LORIN BROOKS'
FINE CALF, PATENT LEATHER DRESS AND
Water-Proof Boots.

PARTICULAR ATTENTION GIVEN TO ALL ORDERS TAKEN FROM MEASUREMENT FOR
OFFICERS OF THE ARMY AND NAVY,
And all who wish the Best Quality
CLOTHING,
MADE IN THE MOST APPROVED STYLE.

Pacific Oil and Camphene Works.
OFFICE—38 Commercial street, near Front,
MANUFACTORY—Taylor street, North Beach.
BRANCH—No. 51 K street, Sacramento.
THE Office and Store of this Establishment are removed to No. 38 Commercial street, near Front (lately occupied by Messrs. Farwell & Curtis), where they have on hand and for sale in lots to suit—
10,000 gallons Crude Whale Oil;
10,000 " Winter Oil—in bbls. and cases;
3,000 " Sperm Oil;
6,000 " China Nut Oil—in jars
3,000 " China Nut Oil—in case
3,000 " China Tea—in bbls.;
1,000 " Tanners' Oil;
3,000 " Lard Oil.
Camphene and Burning Fluid,
Distilled fresh every day.
ALCOHOL AND TURPENTINE—always on hand.
To Grocers and Bakers.
EXTRA REFINED LEAF LARD,
Of our own manufacture, constantly on hand, in large or small lots.
All sales guaranteed, and delivered to the up-river boats or to any part of the city, free of charge.

Hop Roots, Horse Radish, &c.
THE very best variety and quality of Hop Roots, in any quantity, can be furnished by the undersigned at short notice. Also—Horse Radish Tips for planting.
Persons desirous of making plantations of the Hop had better make application soon.
Orders left with COL. WARREN, of the "FARMER;" Or addressed to WORTHLEY & CO., 29 Clay street, San Francisco; Or J. A. HOBART, Esq., Oakland, Will be promptly answered. v7-3

HORTICULTURAL.

To Farmers and Nurserymen.

DWARF FRUIT TREES AND SEEDS, only twenty-eight days from New York, by Express of Wells, Fargo & Co. An invoice packed expressly for this market, consisting of 2,000 Dwarf Pear Trees—Bartlett, Esta Buene, White Doyen, Louis Bon de Jersey—all grafted on Quince Seedlings.
1,000 Horse Chestnuts, 1 year old;
1,000 Chesnuts, " "
2,000 Cherry, " "
1,000 Plum, " "
25 lbs. Yellow Onion Seed;
25 " Marrow Squash;
10 " Drum Head Cabbage;
50 " Beet Seed;
25 " Quince Seed;
50 " Apple Seed;
25 " Plum Pits.
Being the only lot of New Seeds received yet from the States. Orders are solicited early—will be sold low.
Seedlings—price will be $1 50 per dozen; $10 dollars per hundred, packed free of expense.
BRADSHAW & CO.,

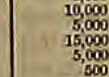
Commercial Nursery,
Three-Quarters of a Mile East of the City of San Jose.


THE Proprietors of this Nursery, having received the award of the FIRST PREMIUM OF THE STATE SOCIETY the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of
FRUIT AND ORNAMENTAL TREES,
For the Trade of 1856 *and* 1857,
that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.
Our Stock consists of
One Hundred Thousand Trees,
FROM FOUR TO ELEVEN FEET IN HIGHT.
Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs;
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.
Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.
Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.
Our terms are CASH and all remittances to be sent by either of the above Express Companies.
Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.
☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.
All communications addressed to the subscribers will receive prompt attention.
v7-1 3m SMITH & WINCHELL.

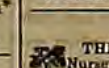
Briggs' Nursery,
Three Miles from Marysville, on Great Road.
THE Proprietor of this extensive Nursery would invite those who intend to establish Orchards the coming Autumn to the following stock of Trees, which will be ready for sale:
70,000 Extra Peach Trees, from 5 to 6 feet;
100,000 Dormant Buds;
6,000 Full size Plum, of best kinds;
10,000 Dormant Buds;
5,000 Cherry Trees, good size—best sorts
15,000 Pear, of the rarest kind only;
5,000 Apple Trees, ready for orchard;
500 Quince, of very choice kinds;
10,000 Nectarine Trees, of extra size;
10,000 Apricot " " "
The above are grown under the eye of the undersigned, and the kind of fruit he has exhibited the present year is the best guarantee that they are indeed fruit trees that will bear.
The proprietor of this Nursery will receive from the East this Autumn an invoice of some
Fifty Thousand Trees.
These will be of extra sorts, and such as the proprietor will guarantee to his patrons.
The proprietor being desirous of encouraging others to plant Orchards of fine Fruit Trees, will offer the following inducements:

Peach Trees, No. 1, named first			$1 50 each.
" "	"	Dormant buds	50 "
Palm	"	full size	2 50 "
"	"	Dormant buds	1 25 "
Cherry	"	full size	2 50 "
Pear	"	" "	1 50 "
Apple	"	" "	1 87 "
Quince	"	" "	1 50 "
Nectarines			1 50 "
Apricots			1 50 "

All the above trees will be warranted true, as the proprietor is more desirous to have his customers succeed and do well, than merely to sell his trees.
☞ Purchasers of over $1000 will receive a discount of twenty per cent.
v6-4 G. G. BRIGGS, Marysville.

The French Garden,
Near the Cottage, on the Santa Clara Road.
A. DELMAS, PROPRIETOR.
GRAPE VINES! GRAPE VINES!!

THE Proprietor of these extensive grounds would take pleasure in calling the attention of the public to the very great collection of Grape Vines, which he will offer the present season.
The Fruit from this Garden was exhibited at the late State Fair, and received the Diploma of the Society. The White Wine made from this Vineyard received the First Premium of the State Society. This Vineyard also obtained the First Premium for the Best Vineyard of Foreign Grapes, the present year.
The Proprietor will offer the present season his grand collection of Eighty One Varieties. Among this splendid assortment will be found—
Black Hamburg;
Chasselas of Fontainbleau;
Chasselas of Frontignac;
Cannon Hall Muscat;
Muscat of Alexandria;
Charlesworth's Tokay;
Syrian; Black July;
Golden Chasselas;
Together with every variety of the Grape known and approved.
The undersigned is confident that this collection is the largest and most complete in the country, and to this the attention of the public is particularly invited.
The subscriber would also offer—
APPLE, PEAR, PLUM, PEACH, APRICOT, NECTARINE, and other Fruit Trees.
—Also,—
RASPBERRY, CURRANT AND GOOSEBERRY TREES,
In good assortment.
Catalogues of all the varieties grown in this Garden will be sent to all who desire them, by addressing letters to the proprietor.
All orders will be answered promptly, and Trees and Vines carefully packed for any place in the country.
A. DELMAS,
v6-13 4m French Gardens, San Jose.

San Jose Nursery.


THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of
FRUIT AND ORNAMENTAL TREES,
ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.
Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 60 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.
The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer
Grapes, 72 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.
In each of the above the very best and most approved varieties.
The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—
Black and Honey Locust;
Chinese Ailanthus, Caralpas.
—Also,—
20,000 Mulberry Trees,
All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.
ROSES! ROSES!! ROSES!!!
In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.
The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.
Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.

San Jose City, Oct. 16, 1856, v6-13 4m

The California Farmer.

SAN FRANCISCO, FRIDAY, FEBRUARY 13, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

The Homes of Fruits and Flowers.

That we love the beautiful in nature, and that we love to encourage their development, our efforts for the last six years of our life in California can well attest; and however much the sordid, ignorant or thoughtless may esteem the efforts made by the laborers in the field where so many laborers are needed, this we know, if money cannot always be coined, if clean gold is not always returned for every effort put forth, still there is a rich reward always in store for every earnest, truthful workman, far beyond the wages that mammon craves.

A desire for the study of nature, even in the two departments of Flora and Pomona, opens a book for the student whose every page is full of golden letters, and whose every line is set to music, and the reason why so many fail in understanding either the goddesses Flora or Ponoma is, they seek them only to coin money out of them, and, failing to know their alphabet or learn the music, they turn from their pursuit and seek the wealth they desired from other sources. Those who would become thoroughly acquainted with a knowledge of the science of horticulture must have an inherent love of labor, practical labor, and be willing to work even at a sacrifice—*they must learn to labor and to wait.*

We have long since declared our belief that California was destined to be the "Garden of the world," and although some years since the idea was ridiculed, even that we should become an agricultural country, yet evidences are now so abundant that this shall be the greatest fruit growing and wine producing country, that all eyes are turning to our splendid specimens of fruit and delicious wines. But California is not alone to be the garden spot of the earth; portions of Mexico, Sonora, sections of Nicaragua, and vast tracts of Central America, will ere many years come under the control of the Anglo Saxon; and all these now waste places of the earth, or rather these yet uncultivated gardens of the earth, will be made to bud and blossom. Whatever may be the opinions of men relative to the Nicaragua question, or the cause pursued by those now contending for its possession, it cannot be denied that Nicaragua is indeed one of the homes of fruits and flowers.

By the last steamer from thence, among the passengers came Gen. Fry and lady, formerly our most esteemed citizens of Sacramento. Gen. Fry, one of the best officers in the army of Walker, and his amiable and accomplished lady, are great acquisitions to Nicaragua. Gen. Fry comes up on business, and will return with his lady next month. It was not our business to inquire particularly of them about military matters, other than the great and general results, of which we speak in another column; but it was our business, and our wish and interest, to know of the fertility of the soil, of their fruits and flowers, and of scenes and places more in consonance with our feelings, than the battle field and scenes of strife and desolation. From the General and his lady we learned of the fertility of the soil, of the beauty of the climate, of the luscious fruits and the fragrant flowers; and while we shall speak of them, we do so not to advise our citizens to go there, but to hope those delicious kinds of fruits in all their varieties, and their most beautiful flowers, may be transferred to California; believing we too can enjoy them here in all their excellence.

In speaking of the fruits, Mrs. Fry informed us that they had twenty-one varieties upon their table at one desert; and although the flowers there do not excel those of California, yet the varieties of fruits excel those of most other portions of Central America. We gathered much information from our Sacramento friends (for they will always be claimed as Sacramentans), of a very interesting character, relative to those departments, for which we feel a deep interest, and we hope to be able to lay before our readers very soon, a list of the fruits and flowers of Nicaragua, and in the course of a short time to present much that is of interest from various portions of Central America. At this meeting of our friends, and while describing the beauties and riches of the climate of Nicaragua, they said to us: "Colonel, we often thought of you there, when we had rich fruits and flowers upon our table, and when we were in the fields where they grew, we thought of you and your love for them, and how delighted you would be to behold them." In these few words, thus kindly expressed, we felt more than we could utter. None but those who love and appreciate nature in her perfection can know how rich a reward it is to be thus remembered—remembered because we worship nature. We had rather be thus remembered, than to have been a victorious leader of an hundred battles. How truly such kind associations prove that

> "Nature never did betray
> The heart that loved her!"

Such associations in the memory of our friends will ever serve as a stimulant to greater exertions in the development of earth's richest, fairest and best.

> How cheering to the o'ertasked heart,
> When sad, lone hours, like some dark spell,
> Sweep o'er the soul, till tear drops start—
> To know that we're remembered well;
> And sweeter still: yes, nobler far,
> To be recalled mid nature's bowers,
> Where clustering fruits in beauty are
> Encircled with bright, fragrant flowers:
> Such are the memories that tell
> *Right effort* is remembered well;
> And such remembrances we feel.

Wool Growing—Improvement of the Stock—Woolen Manufactures.

NO I.

Having often written upon this subject, and presented facts sufficient to turn public attention to this subject, and having published important data relative to the various breeds of sheep which should be introduced into the country, as well as presented the plates of such animals, we are amply rewarded for these efforts by seeing the public mind awakening to its importance.

Until within some two or three years, there were few or no sheep except the coarse Mexican breeds. Then the American sheep came across the plains, and more recently several lots of superior Saxony Merinos were imported from Australia by Messrs. Whitney and some other parties; and more recently a higher grade of full blood of a peculiar kind imported by Messrs. Searle & Wynn, of which we spoke in Number 1 of this volume. All these efforts are but the beginning of a great work, and the commencement of enterprises that shall redound to the credit and prosperity of California.

The first and most immediate results will be to make California a wool-producing country. Here we have a product, easily obtained, for which it can be said there is always a market; and the fact is already before us, that even the coarse unwashed Mexican wool shipped hence commands a higher average price in Boston (the great wool market of the United States), than any other coarse wool sent from the great wool marts of the world. Of this we have the data; but this is only coarse wool.

When we would speak of what can be done in California, we have the plain undeniable facts that we can produce wool cheaper than any other country in the world, for we know the flocks will breed faster, and we can rear them without any other cost than to have a ranch to run upon and breed.

The great and important matter now for wool growers to decide, is, *the kind of sheep to keep*—and is answered by the simple question, what breed will increase faster and produce the most and best wool? We answer, unhesitatingly, Saxony stock. This is the starting point, and from this a little experience will soon satisfy the owner of a flock, if he is what he should be (acquainted with his business), the crosses he should make so as to adapt the animal to the climate and food upon which they feed. The full blooded Saxonies have been much experimented upon in various countries of Europe, and in the United States the cross of the Saxonies with the native American sheep, has done well; but here in California, with a perfect climate, and with seasons and locations so wondrously favorable, we ought not only to make great discoveries and advances in sheep raising and wool growing, but to make it very prosperous. That it must become so is inevitable from the fact, that Wool is steadily advancing in every market in the world, and that while the demand has largely increased of late, the quantity brought to market has decreased; this we are enabled to prove from carefully revised tables, forwarded us from the house of Messrs. G. W. Bond & Co., the great wool brokers of the East—and this house says to us, in a note, while speaking of the imports of woolen fabrics:

"Our table of imports shows an increase for the first six months of the current year over the last, but still a large falling off from any previous year; and the stock of foreign wool in the market, both here and in New York, on the 1st inst., was much below even that of the 1st of January last."

Here we have the facts, that the importations of foreign fabrics yield to home manufactures, this producing a greater demand for wool, and of course increasing it in value, in a measure with the *pro rata* amount of the tariff upon such manufactured articles.

We here annex the Wool Report of this house, of July 1, 1856, and in a short time we will present it up to January 1, 1857:

Imports of Wool into the Port of Boston for the first six months of the last four years:

	1853.	1854.	1855.	1856.
England	1,648,360	722,200	122,945	37,517
Buenos Ayres	1,894,377	2,029,801	440,558	1,360,748
France or Mediterra.	537,220	264,230	9,767	33,691
Turkey in Asia	1,765,779	1,326,566	1,274 876	1,241,044
British Poss. in Africa	223,526	155,310	117,693	183,427
Brazil	20,423	5,636		
British No. Am. Poss.	2,033	154	490	
Dutch West Indies	43,966		3,170	
Malta				76,500
Turkey in Europe			67,661	149,386
Chili and Peru	1,112,455	1,242,982	1,526,568	1,647,082
Italy	222,961			
Spain	131,968			
Cape De Verde Isls.	424	1,175		
Total	7,623,562	5,809,044	3,553,018	4,735,395

These facts show a falling off in the foreign imports nearly three millions of pounds. Our next report will go more into detail.

We shall now call the attention of our readers again to the superior breed of sheep imported by Messrs. Searle & Wynn, and which we believe will work a revolution in sheep raising and wool growing in California.

These sheep were selected from the flock of J. D. Patterson, Esq., of Westfield, Chataque county, N. Y., and are from stock that has been experimented upon by crossing, first in Spain, France and England, and then in the United States, and the crossings were made for the purpose of affecting the character of the wool. These experiments have been completely successful, so that this variety of sheep is now esteemed the best breed for wool growing known.

It is well known that the fleece varies in quality, materially, on different parts of the body, and the point aimed at was to have an evenness of wool over the entire animal, and those who wish to examine these sheep of Messrs. Searle & Wynn, will note this fact, and also that they make wool down the entire legs, and even, fine and heavy fleece over the whole sheep. This is the desired aim.

That it will be a very prosperous business to those who engage in it in a proper manner, there is no reason to doubt. It is a certain thing for those who will give their entire time, attention, and capital to it, and those also who are disposed to make this business their study, so that while they may strive to get rich by it, they shall at the same time advance the science of sheep and wool growing, and benefit the State.

We shall present other facts in our next issue.

Silk Culture.

The prospect of California becoming distinguished in the cultivation and growing of the silk worm and manufacture of silk, is every day becoming more and more apparent to us.

In New England, many years ago, it was in progress to a considerable extent; but it was so blended with the famous morus multicaulis speculation, that when the bubble burst nearly all who were moderately engaged in it gave it up, on account of the ridicule which fell upon that speculation, by which thousands were ruined. We remember well the mania for the mulberry, and could tell some amusing stories about it. One of the most famous men of that day, in the New England States, was Samuel Whitmarsh, Esq., of Northampton, whose cocoonery was very extensive, and who, indeed, did produce beautiful silk. Mr. W. afterwards established the celebrated water cure establishment. These speculations proving unsuccessful, Mr. W. went to the Islands and tried again, and was again unfortunate. The same fever was kept up with the morus multicaulis by the celebrated Wm. R. Prince, by whom probably as much, if not more, than any other nurseryman in the United States this speculation was owing. Mr. P. himself being largely engaged in it, and suffering heavily by its sudden overthrow. Had it not been for this mania, we believe the United States would be engaged in the manufacture of silk to a much greater extent at the present day. Cocoons are still raised, and silk culture has not wholly been blotted out. We believe the people of several of the New England States are yet engaged in it. Tennessee, Indiana and Kentucky are growers of the mulberry, and produce more or less of the raw material. We learn too, from our correspondents, that the subject is gaining a new interest, and that in the Southern States it can be made more profitable than many of the products generally raised, and this must call attention to it.

We believe that of all the States of our Union, California stands pre-eminently the best, as to climate, both for the cultivation of the mulberry and the raising of the worms; for we have no frosts hard enough to injure the mulberry, and the worms flourish best in a dry climate. Beside this, nature seems to point out to us the certainty that they were to be a natural production, for we have a variety of silk worms, found here, of a peculiar character, and a shrub upon which they feed. Upon each of these we can improve, and we truly believe it can and will become a very important branch of our manufactures in coming years.

We can note that already there are large plantations of the mulberry in the country. The native worms have been produced in all forms, under care, and silk has been gathered from their cocoons and wound. This was exhibited at the State Fair at San Jose, by Messrs. Sayd & Behrn, to whom a premium was awarded. L. Prevost, of San Jose, has nearly 30,000 mulberry trees for sale, and other parties have more or less quantities. This is the foundation for our future silk factories, and speaks a certainty of success.

Splendid Camellias for California.

In the collection of Camellias of which we have made mention as having seen at the Golden Gate Nursery, we are most happy to find the splendid American seedling Camellias "Wilderii" and "Mrs. Abby Wilder." We had imported these varieties as early as 1852, and when our exhibition room and hall were destroyed by fire, they too were lost. Others that came were lost in our garden by the flood; but now we find the same varieties in perfect health at Col. Walker's garden, and were in full bloom the past week. We have a deep interest in these famed Camellias and recognize them as old friends and acquaintances, for we had the honor of introducing them into England in January, 1847, and sold them at *ten guineas the pair.* These Camellias were raised by the Hon. M. P. Wilder, from seed, after a long and careful process of hybridization. The Wilderii created a great sensation among the florists when it first bloomed, on account of its perfection of form and color. Scarce had it sprang into being when the conservatory of Mr. Wilder was partially burned, and this gem was burned down to the last bud. From this, by careful nursing, it was saved, and soon became noted, and another new seedling was added, and their blooms shown at the Massachusetts Horticultural Society's Rooms, and the highest prize of silver plate awarded to them—they were named "Wilderii" and "Mrs. Abby Wilder," in honor of Mr. Wilder and his lady: Mr. Wilder being then the President of the Society. Soon afterwards, when only a few cuttings had been propagated, we purchased the pair with their stocks of Mr. Wilder for one thousand dollars, propagated them about a year, and then visited England, France and Belgium, and introduced them there. As evidence of their character and real merit, we bore the approving testimony of the Massachusetts Horticultural Society; and these splendid Camellias are now found in every valuable collection in Europe. They were not sold in the United States till one year afterwards, when we introduced them at $25 per pair, at which price large sales were made. This was the highest price ever paid for Camellias in the history of that flower.

These beautiful varieties are now among Flora's Gems on the Pacific shore, which we are most happy to announce. We esteem them as two of the finest flowers ever yet shown. The Wilderii is of a rose color, full clear tint; most perfectly cupped petals ever seen. The Mrs. Abby Wilder is a rose white, or creamy white, delicately imbricated; often a dash of carmine or rose color through its petals. Both flowers are very perfect and beautiful, and worthy the high name and fame they bear.

A short Trip Among the Flowers.

We took a hasty stroll to the Mission Dolores, in the early part of the week, to look at the collection of Roses under the eye of that skillful cultivator Sontag; and we were well repaid for it. We feel confident that our own experience in the growing of Roses enables us to tell when this queen of flowers has been properly grown, and it is but just to say that Sontag has no one who can excel him in this department. He has, by giving his whole time and attention to this branch been enabled to make a collection that is unsurpassed in the country. We were kindly and particularly shown through all the houses, of which there are three, and the plants in all stages of growth shown to us and their manner of cultivation explained.

If we had doubted the system adopted, the Roses in the fine condition in which we found them would have been sufficient proof of Mr. Sontag's manner of growing, for we never saw finer-grown or more healthy plants. We should think we examined in the three hours, six to seven thousand large Roses, besides several thousand in thumb-pots, to be planted in the open ground; these Roses are now breaking finely into bud. We noticed the superb Perpetual Moss, Moss Adelaide, and Moss Cristata; to these some thousands of Géant des Batailles, the most superb red rose known; Soffrano, which shines among the roses as Venus among the stars; and we noticed also the two new yellow roses, Gloire de Dijon, a French rose, and Isabella Gray, an American seedling—these are the two finest yellow roses known, and both climbers. Mr. Sontag has every new and valuable Rose, and those who would enjoy the growing and perfecting of a rose in their parlors, are reminded that now is the time to purchase, just as the plant is breaking into strong growth, and before it is in bloom. Then it will become acclimated to the room where it is to grow, and the bloom will be much finer and more lasting, than if it were purchased in full bloom from the conservatory or auction room and carried to the private parlor.

Center's Garden (John O'Hare & Co.).—We visited this splendid garden also, and were much pleased with the great improvement and rapid advance made in the ground around the conservatory, and with the beautiful collection of Roses in the newly designed parterres, and the collection in the houses. Messrs. O'Hare have indeed been industrious the past year, to get so fine a winter stock. We saw some extra large Roses in tubs, that were indeed beautiful. And we noticed also a handsome collection of other plants, all in most excellent order. We have never seen Roses grown so bold and strong, as several we saw trained upon the rafters; of these the Chromatella (or Cloth of Gold), and the Solfatare, both yellow, with the Gen. Lamarque, the best white rose known—these must look superbly when in bloom, and we advise all who love beautiful plants, to visit both these gardens.

Mr. Miller and Mr. Langerman, on the Old Mission Road, have fine collections, but our time prevented an examination.

Mr. James O'Donnell, at the United-States Nursery, on the New Mission Road, has both Garden and Conservatories in very fine order. One feature of interest in this place, is: it was formerly a "waste place," and has been converted into a beautiful garden, by untiring personal labor. The brothers O'Donnell commenced this place but about two or three years ago, and now it is a little garden of Eden. Several of the finest Acacia trees in the country are in full vigor here; all the fine varieties of plants are in the garden, and the conservatories, of which there are three, are well stocked. Camellias, Roses, Daphnes, and all other choice plants are in the very best condition, and will soon make a most attractive show. These grounds and houses are now in the exclusive charge of Mr. J. O'Donnell, Mr. Wm. O'Donnell having established a beautiful garden at San José, where, magic-like, he has made a thriving and picturesque scene in the short space of some year and a half or two years.

Our next visit was to the Golden-Gate Gardens, of Col. W. C. Walker. Here we find one of the largest collections in the country. Mr. Walker has the largest and finest Conservatory in California, and he has spared no expense in importing every choice plant and shrub. The collection of the Camellia Japonica numbers hundreds, and includes the best kinds known. We were pleased in finding the Camellia Wilderii and Abby Wilder, of which notice will be seen in a separate article. The collections at Walker's Garden are vastly more extensive than persons can suppose exist on the Pacific Coast, unless they should examine for themselves.

The large span-roof Conservatory of Colonel Walker is 100 feet long. He has a Rose House, another for Australian and choice plants of all kinds, several for young plants—in all some ten or twelve houses, and a stock of twenty to thirty thousand plants—these with every variety of garden plant and ornamental shrub, make these grounds a place worthy a visit.

We take pleasure in calling attention to these grounds, and to each of those we have named, believing they deserve well of our citizens, tending as they do to embellish our homes, refine our tastes, and lead us to a knowledge of the laws of nature and to a love of the beautiful.

The Mechanic's Institute of San Francisco

We publish the following communication of a member of the above valuable Institution, showing the feeling that prevails relative to it. We were present at the meeting named, and were particularly pleased and gratified at the unanimity that prevailed, and were doubly glad to hear it announced by the President that the Institute was free of debt.

It is cheering also to know that their Library is large and rapidly increasing, as will be seen by the communication. These are facts reliable, as we have examined the Library and works there. The donation of Messrs. Barry & Patten was a magnificent gift, for which we know they will receive the grateful thanks of every member, for it is justly due them for such an expression of interest in their welfare.

The announcement made last week, by the Institute, of a Festival Exhibition in August, it will be seen, is in earnest progress, and it behooves every mechanic and manufacturer to be awake to the great importance of this exhibition.

Let the mechanics and manufacturers of this State unite, and show what they can do, and their ability and skill will break upon the Public with astonishment; the result of which would be to check a large portion of the importations now made here of articles which are and can be made with facility and profit.

We should be glad at all times to render facilities to every branch of Home Industry, and every fact relative to them will be gladly and thankfully received.

San Francisco, Feb. 7th, 1857.

Editors Farmer: The last regular meeting of the Mechanics' Institute of this city, held at their rooms (No. 110 California street), on the evening of the 4th inst., was an interesting one. The Standing Committee made their annual report, setting forth the condition of the Institute, in accordance with an Article in the Constitution calling for said report at the monthly meeting in February of each year.

The Committee on Ways and Means reported through their Chairman, Mr. William McKibbin, that the pecuniary affairs of the Institute were in a prosperous condition, with several hundred dollars in the Treasury, and no outstanding liabilities.

The Committee on Books and Donations reported through their Chairman, Mr. C. L. Taylor, that about four hundred volumes had been added to the Library, during the past year, the larger portion of which were very valuable works. One in particular received especial notice, which was a magnificent work on Architecture, donated to the Institute by Messrs. Barry & Patten, of this city. The title of said work is the "Illustrated Alhambra," or "Antiquities of Grenada," and is said to have been gotten up at a cost of *five hundred dollars* per copy, by a limited number of individuals in England, and after the specified number of copies subscribed for had been stricken off, the dies were destroyed, thereby preventing the possibility of an extra edition. It is by no means extravagant praise to pronounce this the most magnificent work on Architecture ever seen in California, and a gift more highly prized by the members of the Institute than any of which they have before been the recipients.

The Committee on Library and Reading Room reported, through their Chairman, Mr. G. D. Street, the acts and doings of said Committee, during the past year, which showed that they too had been very efficient in the discharge of their duties, and had provided suitable accommodations for the Institute, at a very moderate cost.

Each of the reports gave evidence of the fact that our Institute is now in a flourishing and prosperous condition. The present Directory (whose term of office expires with this month) have been energetic, and worked together harmoniously, having the welfare of the Institute alone in view.

A resolution was adopted, calling for a special meeting of the Institute, on the evening of the 20th inst., for the purpose of making nominations and the necessary arrangements for the annual election of officers, which will take place on the first Wednesday of next month.

The following named persons were elected honorary members of the Institute: F. W. Macondray, Esq.; Samuel Brannan, Esq.; T. O. Larkin, Esq.; Hons. Wm. M. Gwin, D. C. Broderick, J. W. Denver, Samuel Soule, Eugene Sullivan, Frank Tilford, W. J. Shaw, J. B. Weller, Judge Shattuck, Samuel Purdy, S. P. Webb; W. H. Farrar, U. S. District Attorney, for the District of Oregon; Henry S. Dexter, Esq.; James Lick, Esq.; His Excellency J. N. Johnson, and Col. W. J. Pardee.

A Member.

The Increase of Agriculture.—However much complaint there may be about dull times and hard times, one thing is very certain, "the country is safe," whatever becomes of individuals. Business undoubtedly is deranged, because the legitimate laws of trade have been violated The State has had more goods brought into it than she can pay for, and the drain of her precious metals has deranged trade, and the crisis makes people feel it; but notwithstanding all this the State is growing and advancing on to prosperity. Do our readers ask us for proofs. We give them.

Two thousand plows, over and above the amount ever sold before in one year, have been sold by the dealers in San Francisco alone: add to this increase those of "home manufacture" over the entire State, and the dealers in other cities, and we venture to say that the number of plows sold the past year will exceed that of former years by five thousand. Add to this the number of reapers, mowers and threshes of grain, and from those of whom we have gained information, these have been increased from 200 to 300 per cent. over former years—less proportion of threshers, as they sustain use longer than mow-

ers—and here we have facts to warrant us in saying the "country is safe." And who does not rejoice to know this fact. We often hear an ignoramus say the city builds up the country; but we know that it is this prosperous tone of the country that can alone inspire the mercantile interest with any degree of hope.

Beet Sugar.

This important branch of manufactures is assuming a tangible shape, and we watch with intense interest the feeling that is growing up in our community to favor its introduction into the State in a legitimate way. We have conversed with several parties upon the subject, and feel assured that there are grounds for the strong belief that ere another year we shall see more than one manufactory under way.

Gentlemen in Alameda county, in Marin, and Santa Clara counties, all feel an interest in the subject, and to-day we have received several letters upon the subject, and we find many ready to offer capital for the work. That it can be successfully accomplished, we have no doubt, and that it will also be profitable. We feel confident, as we remarked last week, the Sugar Beet for the feeding of stock, will pay $250 per acre. It has been estimated that the total product in France, from the Beet, in sugar, sirups, alcohol and food, amounts to nine hundred millions of francs annually; and that we can raise nearly quadruple the amount per acre in California? Shall we not awake to its importance?

Since our last issue we have conversed with Eugene Delerserett, Esq., and learn many particulars favorable to its manufacture, and we are glad to see the deep interest he is manifesting for this great work. From his associations and influence we have no doubt he can accomplish much, and it will redound to his credit; and we say all honor to those men who call into being new products and manufactures of any kind.

Where is all the Wheat?

Some week or ten days since it was evident that the quantity of Wheat was running short among the millers; inquiry was instituted, as little or none was to be had. Wheat must be scarce, was the cry, and immediately a sudden rise took place; wheat rose up from $2 50 and $2 65 to $3 25, $3 50; and even higher offers were made for lots of best; when lo! presto change! *five thousand bags* came to market in one day, and the fever cooled down—and it was ascertained that *there was* some wheat in the farmers' hands.

Thus a mere speculation is checked; and we believe it will be found that the great bulk of wheat now on hand is, where it ought to be, in the hands of the growers. And we rejoice to know they will reap the reward of their labors. When the farmer gets good prices, the country prospers, and we say to farmers, now—act wisely, but well. Better for farmers to sell at good prices than be in debt.

General Sutter and Land Titles.

There has been so much said in relation to this good old pioneer and his claims for immense tracts of land; so much that was not only harsh and cruel, as well as unjust, that we believe that all persons interested in claims which are connected with the General, will be pleased to read the following noble and manly sentiments uttered by him. They must convince them that Gen. Sutter wishes only that which is just for himself and is desirous that others should be alike prosperous. Most assuredly these unsettled land titles are the great source of hindrance to improvements, and everything that can be done to quiet claims and restore peace, harmony and prosperity, must receive the approbation of every good citizen.

We know from repeated conversation with General Sutter that he is desirous to bring about this happy result; but we ask every honest mind if it is not cruel, if it is not wickedly unjust, to see one who was the "original pioneer," one whose doors were always open to the stranger, to the homeless and friendless; and whose means, so long as he had means, were ever at the command of the needy, should now in his old age suffer the deprivation of those comforts he so much needs and so richly merits.

We hope a better feeling will prevail towards him, and a speedy justice be rendered him ere it be too late, for should the General be taken away before his claims are fully and justly settled, a wrong will have been done that nothing can ever wipe away. While England has given pensions, and bounties, and honors to the discoverers of gold in Australia, neither the United States, nor California, have ever remembered, by any act, one who has given a greater impetus to business of all kinds, and changed the affairs of the world, more than any one man living—for no one will deny that if General Sutter's mill-race had not been discovered as it was, and we not come into possession of a gold country, it would have changed the whole destiny of California—the world. We hope that even at this late day, some effort may be made to recognize the obligations which California and the United States owe to this noble Pioneer. While speaking of him we would mention that a superb equestrian likeness of the General has just been received by Col. Andrews, of Sacramento, from New York. Col. A. has been at great expense, while in New York, to have a fine memento of the General, and he has received a large number, both in frames and plain copies. Those who wish can see this work, which we hope will be obtained by all who feel as they should to this early and true friend of California.

We append the true sentiments of the General in regard to the squatters:

"If the Settlers of Sacramento county had purchased under my claim, they could now be the owners of the land they occupy, the whole county would have been adorned with culture and improvements, the treasury ample, taxes reasonable, and people prosperous and happy, confident that they could repose in quiet, under their own 'vine and fig tree.' As it is, more than one-half the county is an unoccupied waste, with inferior and sickly looking improvements—for what sensible man is there that will buy land and improve it without knowing he has a title that will be protected by law."

California-made Chairs going East.—We are truly glad to see the manufactures of our State duly appreciated, for we believe that we have some of the very best workmen, in every department of industry, that can be found in the United States. We saw two beautiful and rich satin "Lolling Chairs," made to order by Messrs. C. Sherman & Co., on Montgomery street, San Francisco, which were intended for presents, to be sent East. They were indeed superb—costing about $100 each. This we like—for we have so much gain. Every dollar spent here for home manufactures is so much saved: aye, doubly, for it gives life to Home Industry, and every merchant and trader feels it beneficially. Messrs. Sherman & Co. can do such work as well as any house, and these rich specimens of their work are worth looking at. We hope others will send presents east, in like manner.

The Public Hotels.

The "Rassette House" is receiving additions every day to its numbers, now already large. The dinner table presents a fine "tableau;" it looks like some great festival scene, the numbers are so large. The parlors, each evening, are lively, cheerful and gay, from the gathering of the several families who are boarders there.

The "International Hotel," since its new opening, is becoming very fashionable. The new parlors, and the newly arranged chambers, with the increased interest given to the comfort and pleasure of its patrons, secure it great favor.

The "What Cheer House," as usual, is daily thronged. Truly Woodward has some peculiar *charm* besides the many attractions of his house, else he could not have such throngs.

From the East.—The mail steamer John L. Stephens arrived this morning (Saturday) at half-past four o'clock, bringing a large mail and 433 passengers. The news is unimportant. The intelligence, at New York, of the decision of the Supreme Court of California, upon the unconstitutionality of the wagon road act, was received with marked disfavor, says the Herald. It is intimated that Lord Elgin will be appointed British Minister for the United States.

Holloway's Ointment and Pills.—Astonishing cure of an Abscess, pronounced incurable by the faculty. Robert Parlett, of Cumberland, Maine, was afflicted for three years with an Abscess in the arm, and was about to have the limb amputated, but was recommended Holloway's Ointment and Pills, which completely healed it. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot or box.

During the month of January $3,182,689 91 in specie and bullion, have been shipped from the port of San Francisco to various sections of the globe.

☞Newspaper Route for Sale.—We can offer a good Route for the city of San Francisco, and one for Sacramento, to one who has the taste for making known our journal. A very profitable route can be thus secured to active and experienced men

McComber & Co's American Express.—Our friends at San Mateo, Redwood City, Woodside, Santa Clara and San Jose, or any other place on the route of this Express Company, can forward to us through them, as they are agents for us.

Letters for the Farmer.—Our correspondents can now address us either at San Francisco or Sacramento, as shall be most convenient for them. Letters, &c., addressed to us at either place will be promptly attended to. Our exchanges will please forward their favors to us at San Francisco, and publishers who are in correspondence with us will hereafter please forward their works for review to San Francisco.

New Cultivator.

THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measures operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.

Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.

All persons are invited to call at the workshop and examine it

BEECHING & POST Manufacturers,
v7 5 3m 35 Pine street, San Francisco.

CALIFORNIA AGENTS.

J. W. Sullivan, *near Post-Office, San Francisco.*
Wells, Fargo & Co., *at all their Offices in this State.*
Pacific Express Company, *at all their Offices.*
Langton & Co., *at all their Offices.*
The Farmer can be found at the following places at all times
Ullman & Co. *P. O. Building, San Francisco.*
J. W. Sanborn, *Benicia.*
Thos. T. Hoofer, *Postmaster, Benicia.*
M. M. Richardson, *Suisun.*
J. M. Dudley, Esq., *Napa City and County.*
Rosenbaum & Co., *Stockton.*
P. F. Grant, *Deputy Postmaster, Santa Clara.*
A. A. Dunham, *Half-Moon Bay, will supply those who want papers.*

Foreign Agents.

C. M. Saxton & Co., *New York City. All orders addressed to the Associate Editor, at C. M. Saxton & Co's, will receive attention.*
J. Q. A. Warren, Boston, Mass., *Associate Editor and Corresponding Agent for the Eastern States, by whom Subscriptions and Advertisements are received—Office, 20 Washington street.*
Gray, Adams & Hogg, *Nurserymen, Seedsmen and Florists, Kensington Road, London, will receive Subscriptions for this paper.*
M. Durand, *Bookseller, Paris, will receive Subscriptions.*

. Subscribers can always form Clubs and transmit by either of the Expresses, or with perfect safety by Mail.

THE LAW OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facie evidence of intentional fraud.

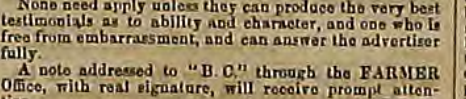
☞ Postmasters would oblige, by a strict fulfillment to the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.

Postage of the Farmer.—The Postage of the Farmer to any part of the State is only 6½ *cents per quarter*, or 26 *cents* per year. This is the lawful postage established by Congress, and when more is exacted it is a violation of law

MISCELLANEOUS.

PETER JOB'S
Confectionery and Ice Cream Saloon,
211 Washington street,--Plaza, 211.
BRICK BUILDING.

☞ SPECIAL NOTICE. ☜



THE well known PETER JOB has the pleasure to inform the ladies and gentlemen of San Francisco and vicinity, that he is at all times ready to serve them at his Saloon, and to supply families with every luxury that taste can demand; and, believing that his Saloon is one of the very best in California, he would invite all to visit it and judge for themselves.

Breakfast, Dinner and Supper,
By the "Bill of Fare," and at the most reasonable prices.
Ice Creams, Cakes, Bon Bons, &c.

OYSTERS of the very best kind, and in every style, at 50 cents per plate, including fresh California Butter, Pet Crackers, &c.

☞ Cakes, Jellies, &c., for Dinner Parties and Balls Particular attention paid to Bridal Cakes and the Extras for Bridal Parties.

. Every order will be personally attended to by the Proprietor. v7 4 3m

A House and Garden Wanted.

A PRACTICAL working Gardener would like to take charge of some house and land, to keep it in order and improve it for one or two years, only requiring as payment the perquisites he could make by extra cultivation and sale of vegetables, &c., such as could be grown while keeping the place in order and safely.

Any person going East, or who wish a place kept in order for one or two years, without cost, can have satisfactory bonds that this will be done, if it is a good place, by addressing "T. Y. F." through the FARMER Office, with real name: then the advertiser will call on them.

☞ Please state where the place is. v7-5 tf

A Gardener at Shares.

AN excellent opportunity can be given to a good practical as well as scientific gardener, for a series of years. To a person who could command a moderate capital a chance will be given that is permanent, and certain to pay handsomely.

None need apply unless they can produce the very best testimonials as to ability and character, and one who is free from embarrassment, and can answer the advertiser fully.

A note addressed to "B. C." through the FARMER Office, with real signature, will receive prompt attention. v7-5 tf

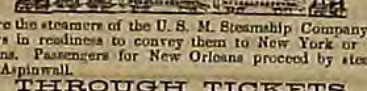
TRAVELING.

Pacific Mail Steamship Company's Line
TO PANAMA,
CONNECTING
VIA PANAMA RAILROAD
WITH THE STEAMERS OF THE
UNITED STATES MAIL STEAMSHIP COMPANY.
AT ASPINWALL.
For New York and New Orleans Direct.

Departure from Vallejo street Wharf.

THE MAGNIFICENT STEAMSHIP
JOHN L. STEPHENS,
H. H. PEARSON, Commander.
Will leave Vallejo street Wharf, with the United States Mails, Passengers and Treasure, for PANAMA,
On FRIDAY, - - - - - FEBRUARY, 20th,
At 12 M, punctually.

Passengers by this Line are landed on their arrival at Panama upon the Wharf of the Railroad Terminus, by the Company's Steam Ferry Boat, and proceed immediately by
Railroad Across the Isthmus to Aspinwall,



Where the steamers of the U. S. M. Steamship Company are always in readiness to convey them to New York or New Orleans. Passengers for New Orleans proceed by steamer from Aspinwall.

THROUGH TICKETS
Are furnished, including the transit of the Isthmus.

Passengers are notified that the tickets for the steamers of the U. S. Mail Steamship Company must be presented to their Agent at Aspinwall for registry and exchange, as they will not otherwise be available.

☞ Treasure for shipment will be received on board the steamer until 12 o'clock midnight, Thursday, February 19th.

No Merchandise freight will be received on board after 3 P.M., 19th Feb., and a written order must be procured at the Company's Office for its shipment.

For freight or passage, apply to
FORBES & BABCOCK, Agents,
Corner of Sacramento and Leidesdorff streets.

☞ A Choice of Berths on the Atlantic Steamers is secured by the early purchase of Tickets in San Francisco. v6-14

California Steam Navigation Company.

ARRANGEMENT FOR OCTOBER 1st, 1855.
Departure from Pacific street wharf, at 4 o'clock, P. M.

CARRYING UNITED STATES MAIL.

Steamer NEW WORLD, Capt. Samuel Seymour;
" ANTELOPE, Capt. E. A. Poole;
" CONFIDENCE,
" WILSON G. HUNT,
" HELEN HENSLEY Capt. E. C. M. Chadwick;
" J. BRAGDON, Capt. Thos. Seeley;
" URILDA, Capt. E. Z. Clark;
" CORNELIA, Capt. E. Conklin.

One of the above steamers will leave Pacific street Wharf every day at 4 o'clock P. M., (Sundays excepted,) for
Sacramento and Stockton,
Connecting with the light draft steamers for
Marysville, Colusa, and Red Bluffs,

For further particulars inquire at the Office of the Company corner of Jackson and Front streets.
v6-1 SAM. J. HENSLEY, President.

Contra Costa Ferry Notice.

CHANGE OF BERTH.

ON and after WEDNESDAY, Oct. 22, 1856, the Contra Costa Ferry Boats will run from the new landing, corner of Broadway and Davis streets, and will leave as follows:

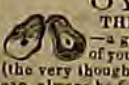
SAN FRANCISCO.	OAKLAND.	SAN ANTONIO.
At 9½ A. M.	At 7½ A. M.	At 7 A. M.
12½ P. M.	11½ A. M.	11 A. M.
3 P. M.	2 P. M.	1½ P. M.

v6 18 tf CHARLES MINTURN, Agent.

CITY COACH.
FARE ONE DOLLAR.

THIS Coach will run to and from the Steamers to the RASSETTE HOUSE, and to all parts of the City, taking passengers for One Dollar each, including Baggage. Orders left at the Rassette House will be promptly attended to by P. MATHEWS & J. ENGLISH.
Please notice the Lettering of the Coaches, "Rassette House." v7-3

OY'S FINE OY'S.



THE luxury of a good "Oyster"—a genuine "Cove Oyster," one of your Baltimore or New Yorker's (the very thought of which makes one's mouth water)—can always be found by those who can appreciate them, either in the Shell, Broiled Fried or Stewed, and in true epicurean style, at "DAN'S OYSTER SALOON," and with this appetizer, before or after, every other dish of dainties, such as those who appreciate good things can always find at DAN'S OYSTER SALOON,
Montgomery street, bet. Commercial and Clay,
v7-3 San Francisco.

WEDDELL HOUSE,
CLEVELAND, Ohio.

MAKE YOUR OWN SOAP.—Another lot of Potash in cans—one can making one barrel of Soap. Price $2 per tin, with directions. [v6-24] BRADSHAW & CO.

BROWN GRANULATED SUGAR.—Another lot of that splendid Brown Sugar, just received—equal to Crushed, and one-third less price. [v6 24] BRADSHAW & CO.

WASH YOUR WINDOWS.—Round Patent Window Brushes, retailing at 75 cents—and every family should have one—at [v6-24] BRADSHAW & CO.'S.

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently *irregular* when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of Insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for ourse's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promotes habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relative—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,346 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

NORTHERN ASSURANCE COMPANY,
For Fire and Life Assurance at Home and Abroad.
Established in 1836—Incorporated by Act of Parliament.
Capital £1,250,760 Sterling.
Annual premium for an assurance of $100 on a single life:

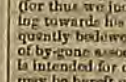
Sale of the Superior Shorthorn Herd
OF THE LATE
NOEL J. BECAR.

To the Editors of the California Farmer:



DEAR SIRS: I wish to communicate through your columns, to the Breeders of Shorthorns, that I have been authorized, by the executors of the late Noel J. Becar, to dispose of his entire herd of far famed Shorthorns. We have also determined not to sell a single animal from that herd until JUNE, 1857, on the day of my annual sale, which generally takes place about the 20th.

Many inquiries have been made by letter, and otherwise, and I take this course to answer previous and future questions. A very full and explanatory Catalogue will be issued in due time, and very generally circulated to all my present correspondents, and as many others as may desire it.

L. G. MORRIS.
Mt. Fordham, Westchester, N. Y., December, 1856. v7-4

GENEVIEVE.

BY KATHARINE GORDON.

[The annexed beautiful lines we copy from Grace Greenwood's "Little Pilgrim." They were written for that paper, and are worthy of being perpetuated.]

Down the lake's gray sandy border, while the sun went toward the west,
Slowly Genevieve was wandering, like a birdling from its nest,—
Singing to the drowsy waters, answering to their monotone,
With a weary, weary murmur, with a low and timid moan,
Looking on their peaceful azure, through her large and bitter tears,
With a woman's sense of sorrow, on her young and childish years.
For the rough, old sturdy farmer, and his wife, with nature cold,
Were cruel, very cruel, to the lamb within their fold.
So she daily pined and sickened, in this rude and foreign air,
Paler grew the pallid temples, 'neath the soft and golden hair;
Thinner grew her lips and sadder, and the glow forsook her cheek,
And her limbs, once fair and dainty, trembled, tottered, faint and weak;
So that now she seemed not human, but a spirit or a fay,
Or some rare and tender creature, in this darksome world astray.
Now with wond'ring, childish vision, gazes she upon the blue,
Where the lake and sky united, seem so boundless to the view;
And she asks what land of beauty lieth in the far beyond?
And her soul with magic pencil draweth pictures fair and fond.
Now within a nook she spieth, where a tiny boat is tied,
Rocking gently on the water, with its little oars inside.
Stepping in with faith so fearless, which unto the child is given,
Says she, "I'll lie down, and sleeping, I shall sail straight into Heaven!"
Then the Sun went to his setting, and the Evening Star appeared,
And the little boat unguided, to the eastward slowly steered.
In the west the tempest gathered, and the heavy clouds arose,
And the night began to darken, tinged with fierce and lurid glows.
Genevieve of all unmindful, looking on the Star of Even,
Closed her eyes, and angel-pilots guided her straight into Heaven.

October 20, 1856.

America! Her Glory, and Her Shame.

[A composition by a pupil at Benicia.]

Turn the pages of history, and view America, in the past. Look back upon her, when ambition first led the bold mariner beyond the sunny seashore of his Italian home, to seek this wild and unknown land. Picture her, as she then was, peopled by rude and savage tribes, who sought no higher aims in life, than to satisfy their barbarous tastes, or to throw the swiftest arrows in the chase; men, uncivilized and unenlightened; these were the rulers of America. Nature's blooming valleys, rich prairies, majestic waterfalls, gliding rivers, and verdant forests, then, as now, adorned this new western land with beauty. But ah! no fruits of wisdom clustered 'mid those wild bowers; no hand of culture was there to twine the falling vine, and no star of knowledge to shed its bright light upon the paths through which the wanderers of these wild woods roamed. And still again, glance upon the tablet of her past: mark the small and feeble band of England's sons, when landing upon America's cold and uninviting shores; view them, by night and day, toiling 'mid the dreaded echoes of the war-whoop, and the darting arrows of their enemies, to sow the seeds of freedom, which other adventurers, from far-off climes, soon came to nurture, and which now have grown to be our greatest glory. Such was America's past. And now gaze upon her present. See the costly structures that stud her shores; the lofty spires that pierce the sky; the moving palaces that float upon her lakes; and the noble ships that bear, far across the sea, her proud banner. Or yet, look upon her people, and view the rich blessings bestowed upon them by the gifted hand of science and religion. Gaze into the hearts of her noble patriots, throbbing with joy, as the anthem of freedom is borne upon the passing breeze.

But heed! Where now is the quietude of yonder wooded dell? Crushed, beneath life's swift tide of action. Where now, the Red man's hunting cry? Hushed: for he no longer reigns; and his once wild America, as if on eagles' pinions, is ever soaring upward, gleaming the brightest star of nations.

America! with joy can we exclaim, our native land! Our Home! Seek ye her *glory*? Turn then to her scroll of Liberty. Read there the noble sentiments and just laws, that guard and protect her people. Look upon her government! A massive piece of mechanism, complete and entire; each part acting separately, but all moving in unity, as a great whole; the fountain from which flow the sparkling waters of her prosperity and glory; the firm foundation-stone, upon which stands freedom of thought, speech, and action. Here, no monarch, upon his gilded throne, demands our homage, and beneath no cruel scepter plead we for freedom and life. In this bright land are ever echoing the welcome tones of liberty. Here, no kingly power points to Religion, by one, narrow path, commanding us to walk therein; but the holy and virtuous promptings of the heart are our guides to righteousness. Look, too, upon the numerous and costly seats of wisdom scattered in her quiet hamlets and busy cities. Bright bowers, adorned by the never fading charms of knowledge, welcoming freely all her youth; generously dispensing costliest treasures; awakening pure and holy emotions; planting in their hearts just and virtuous sentiments; and impressing upon their minds such high and noble principles, that when, as men, they come upon the stage of action, they will place a brighter crown of glory upon America's brow.

But ah! though the choice garlands of honor and fame wreathe America's monuments of time, and glory is gleaming brightly from her sky, still there are clouds of shame lingering near, casting a shadow upon this glorious home. Ask ye, where? Turn, then, to the Indian burial mounds of our far western lands, and count the hundreds who, now reposing there, were innocent victims of the white man's slaying hand. Look upon the aching hearts; the ruined homes; the deserted villages, and the often broken treaties. Does not he, who thus throws suffering, pain and disgrace, upon the red man's followed race, cast also a shadow of shame, upon his fellow countrymen, upon his home? Yes! these deeds of dishonor have deeply stained America's fair fields. * * *

And not only does the shadow rest here. Look upon America's *political* field, and view the many unprincipled men there conquering, though unworthy the name of conquerors. See the thousands there, who cast aside all justice, honor, and true patriotism, to crown their victor with the winning laurels. Such is often the case, in California, where the mine's glittering ore is sought to bribe its people to buy office, and to gain party favor; and thus to darken our cloud of shame.

Even America's *daughters* often tarnish her glory, for many are there, who, worshippers at Fashion's shrine, dwell 'mid halls of pleasure, and the dazzling charms of wealth—forgetful of their country's aching hearts, and weeping orphans.

Oh! may the time soon come, when our people shall be actuated by higher, nobler aims; when our patriots shall be truer to their country; and when *principle*, *right* and *justice* shall be the foundation of *thought* and *deed*. Then will America's glorious banner wave high, o'er her standard of Liberty. EMILY AMELIA WALSH.

Work, or Die.

If we cast our eyes upon a map of the world, and compare the condition of the inhabitants in different portions, we shall at once perceive that the solid wealth, the enterprise, intelligence and commercial prosperity are in the temperate climates; while, on the other hand, those countries which abound in luxuriant and spontaneous growth, are generally sunk into abject degradation, or fast going to decay. In the New World, the Spaniards were the first to establish settlements. Attracted by the hopes of riches, they penetrated the country to the Montezumas, laying prostrate in their pathway all that opposed them, and erecting the Castilian banners and the emblematic cross on fertile regions of vast extent. While their career was marked with brilliant victories, and the gold of their vanquished and plundered enemies swelled their coffers with immense wealth, the slow but hardy Anglo-Saxons were encountering the rigors of a severe climate, and the fierce warfare of the savage. Their enterprise was beset at every step with the most appalling dangers and the severest toils.

Let us now compare the condition of the countries thus established, and we shall perceive that, while the struggles of the hardy Anglo-Saxons resulted in the establishment of one of the most prosperous and enlightened of civilized nations, the enterprise of the Spaniards, commenced under such auspicious circumstances, with an inviting climate and productive soil, has resulted in a number of divided and petty states, subject to despotic sway or the more cruel reign of anarchy; while ignorance, superstition, and intolerance cast their blighting influence upon every department of society. The people have not the inherent vigor either to acquire freedom or guard it with the "eternal vigilance" with which alone it is maintained. There is no country on earth blessed with a more productive soil than Mexico, yet what a picture of misrule and degradation does she present. Italy, too, "the land of sunny skies"—the theme of poets and historians—has degenerated to imbecility and subjugation most pitiable to contemplate.

These conditions spring from the innate order of things. Labor—motion—are the conditions of growth and prosperity. Nature sends forth the everlasting mandate—"Work, or die!" and illustrates it in all her developments. A warm climate, and luxuriant and spontaneous growth, place the means of subsistence within the reach of man almost without effort. He has but to reach forth, pluck and eat. Indolence is the consequence, and indolence results in decay and death.

We behold in all natural growth an illustration of this principle. The elements are in eternal commotion. The planets travel their ceaseless rounds; the air moves in obedience to the laws that control it; the bosom of the ocean heaves ever with the great emotion which God has planted in all things; the sap of the tree circulates through the veins it invigorates. And thus, when man conforms to the great law of activity, he expands. And in the colder climates, where we must subdue forests and seek the means of subsistence in an unproductive soil, vigor and life are infused into society, and prosperous communities grow up.

If we look at the history of the great men who have figured most conspicuously in human affairs, and left the impress of their character upon their age, we shall find them generally to have been of obscure and humble origin, contending in early years with poverty, without the aid of influential friends. The son of a chandler, who entered Philadelphia almost penniless, became the greatest of modern philosophers. The "Mill boy of the Slashes," by his own unaided efforts, rose to the greatest distinction as an orator and statesman, and left behind him an imperishable fame.

But we will not enumerate examples. The pages of history are covered with the deeds of men who, by their own labor, have risen from severe poverty to grasp the scepter of empire and mold the opinions of the multitude. The greatest capitalists that have ever lived have commenced with nothing. John Jacob Astor and Stephen Girard are illustrious examples. The son of the poor man who goes to school with the son of the rich man, though possessed of no better talents, is quite likely to outstrip him. And herein we see the working of this law. Poverty stimulates to action, and *action is growth*. The man who does not use his body becomes effeminate, while the man who breaths the pure air of heaven, and uses his muscles, grows daily in strength.

The greatest men are the greatest workers. A massive intellect, without the industry to exercise it, is like a powerful engine without steam.

Every great enterprise is the result of severe toil. How much racking of brain and straining of muscle have been required to conceive and perfect the steam-engine—the rail road—the telegraph! and how magnificent are the results. These inventions have all originated in the temperate climate; they are the offspring of that mental and physical activity awakened by the causes to which we have referred. While the Anglo-Saxon mind is solving mighty problems, and Anglo-Saxon muscles are bringing forth the most splendid achievements of human skill, the lazy Turk dreams over his pipe of opium—the indolent Spaniard gives up his imagination to his amours, and the Mexican plods on with his slow mule, careless of the bountiful gifts which Nature has spread around him.

We ask the attention of the young especially to these suggestions. Nothing but *work*—severe, persevering *work*—can accomplish the hopes of youth, or fulfil its ambitions. There is no other road either to knowledge or distinction. All the wealth of the Indies can not purchase the development of the mind or the body—no prestige of name can impress upon the age the character of any man. Every one must develop himself—he must win his own laurels or he can not wear them. There is no alternative but to "*work, or die.*"

To be a Man in this World!
YOU MUST OBSERVE
TWO VERY IMPORTANT MAXIMS!!
FIRST, THAT
"Economy is the only sure Road to Wealth;"
SECOND, THAT
"Early to Bed and early to Rise."
You all know what that does for a man.

By the by, speaking of Economy, Beds, Early Rising, &c., reminds us of these magnificent **Patent French Spring Beds,**
AND THE
EXTRAORDINARY REDUCTION
IN THE
PRICE OF LODGINGS!
AT
Woodward's What Cheer House,
119 and 121 Sacramento street,
87, 89 and 91 (new addition) Leidesdorff street.

Lodgings, per night.....50 and 75 cents.
Lodgings in first class single rooms, furnished complete, per night.....75 cents.

If you cherish the least feeling of regard for the pressing wants of the "inner man," the exceeding low price of board at this establishment must convince you that this is the place.

Meals, each.....50 cents.
Board, per day.....$1 00
Board, per week.....6 00

In order to furnish food for the mind, there is a splendid READING ROOM, abundantly supplied with Papers, Periodicals, &c., from all parts. There is also an extensive Library of Choice Works.

☞ FREE BATHS. ☜

In short, everything calculated to promote man's comfort can be procured at the What Cheer House, 119 and 121 Sacramento street—situated in the very center of business. It is also directly opposite the Mail Steamship Company's Office, and in the immediate vicinity of the United States Branch Mint.
B. B. WOODWARD,
Proprietor.

N. B.—This House is conducted on strictly temperance principles. v6-21 tf

SEEDS, &c.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE,
OR,
SORGHO SUCRE.
PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 00 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,
W. P. ORME, Atlanta, Georgia.

Consignments of Trees and Agricultural Implements attended to. J. R. RAY,
v6-9 90 J street, Sacramento.

Garden Seeds.

THOSE who desire Garden Seeds of an extra quality, of any kind, can be furnished at the lowest rates by an order to us, with remittances for the amount desired, to which order will be added a handsome collection of New and Rare Seeds from the Patent Office, with full Reports of Agriculture and Mechanic Arts, *free of charge*, accompanying every order.

Orders sent to our Office at San Francisco or Sacramento will be promptly attended to. v6-24

The Great Giant Rhubard.

THE mighty Giant Rhubarb, of Wisconsin, will be offered on the arrival of the next steamer. Those who desire Roots of the same had better leave orders early.

For sale at the Rooms of the State Ag. Society,
v6-19 tf Fourth street, Sacramen

Seed Rice.

A SMALL lot of new MANILA CADDY RICE, of recent importation, which is the most desirable kind for seed here, being a favorite Rice with the Chinamen. Persons in want of seed will do well to attend to it soon, as this is the only lot in market, or will be for the season, and, unless called for soon, it will be hulled and put into market in the shape of Rice.

WAITE & BATTLES,
v6-21 1m 154 Front street, San Francisco.

Seed of the Great Tree.

A FEW packets of the Seed of this famous Tree are for sale at the State Society's Rooms, on Fourth street, Office of the CALIFORNIA FARMER. v5-13

[PREMIUM MANUFACTORY.]

Hudson's Golden California Mustard.

THE proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs, 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.

The proprietor also manufactures a very superior article of Salad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.

For any further information regarding this Mustard, we refer to the principal business houses in this city.

Purchases at wholesale or retail are specially invited to call at the office,

22 Front street, corner of Pine,
H. O. HUDSON.

P. S.—The highest price always paid for pure A No. 1 Mustard Seed. v6-20 3m

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages. Two Dollars per annum. "Without question the BEST Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."

THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.

THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.

SPECIMEN NUMBERS

Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to LUTHER TUCKER & SON, Albany, N. Y.

☞ Subscriptions for any of the above works received at the offices of the FARMER and forwarded v7-2 tf

J. L. POLHEMUS
DRUGGIST

J. St.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Hulds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

New Agricultural Books.

FIRST PREMIUM AGAIN!

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,
SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that o'er ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

DANIEL C. McGLYNN, Agent.
MANUFACTURERS AND DEALERS IN ALL KINDS OF
LEATHER.

Premium Leather.—The Encinal Tanning Company have been awarded the Premium at the Annual Fair of the State Agricultural Society, held at Sacramento city, September, 1855, for the best exhibit of *California Harness, Skirting and Sole Leather*; and also the Premium at the Annual Fair, held at San Jose, October, 1856, for *Superior Leather*.

N. B.—Highest price paid for Hides, Calf, Sheep, Bear, Deer Skins, &c. v7-2

MEDICINES, &c.

FOR THE REMOVAL AND PERMANENT CURE OF
All Diseases arising from an Impure State of the Blood or Habit of the System.

In this preparation are strongly concentrated all the medicina properties of Sarsaparilla, combined with the most effectual aids, the most salutary productions, the most potent simples of the vegetable kingdom; and the combination is such that one modifies and improves the other, producing a compound differing entirely in its character and properties from any other preparation, and unrivalled in its operation on the system when laboring under disease. It has been so fully tested, not only by patients themselves, but also by physicians, that it has received their unqualified recommendations and the approbation of the public and has established on its own merits a reputation for VALUE and EFFICACY far superior to the various compounds bearing the name of Sarsaparilla.

From the Army.

MONTEREY, CAL., January 18, 1856.

MESSRS. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefited as I have been. I arrived here by the overland route, about the first of October last. A few days after I was attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely.

With high regards, yours, &c.,
J. H. MILLER, Lieut. U. S. A.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists and Chemists, 100 Fulton-street, corner of William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

CLOVE ANODYNE
TOOTHACHE DROPS.
Complain no more of Aching Teeth.

These Drops have been extensively used by thousands, whose experience has proved that the Anodyne will give immediate and permanent relief after the failure of every other remedy. It is pleasant to the taste and smell, and a few applications will entirely remove the pain and soreness from a decayed tooth, so that it may be filled and rendered as useful as ever. When the pain proceeds from the face, or from the gums around a tooth apparently sound, this Anodyne will give a speedy relief by rubbing a few drops on the part affected.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, No. 100 Fulton-street, corner William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v6-21 3m

The Brannan Engine.

We had the pleasure of examining this splendid piece of workmanship during the past week, and confess that we were not expecting to see such a perfect specimen of mechanical beauty and magnificence. Although cognizant of the skill of the mechanics of the United States, yet we were not prepared to see so much perfection in a fire engine.

We were indebted to J. L. Ottignon, Esq., Foreman of the Hose Carriage, for the opportunity of seeing and examining this engine, and who kindly explained the working of all the parts to us, and from the facts we gathered we feel assured there is not a more beautiful, powerful, or more perfect engine on the Pacific coast, if there is anywhere else. It would be impossible for us to give a full description of this fire annihilator, so as to do it full justice; but when we say it cost $8000, it will be understood that no expense has been spared to have a perfect piece of work.

This engine has the capacity to throw one hundred and sixty gallons of water in eight seconds. This speaks its power. We were shown this in the movement upon her valves, by which a report like a steamer's whistle was made by two or three workings of the brakes. All her working machinery, her ornamental parts (even to the tongue or pole), the wheel blades, brakes and guards, are all of heavy, pure silver-plate—this work alone costing some $3500. Superb oil paintings, exquisitely done, adorn the sides of the engine—one, the "Falls of Niagara," the other, a "Lake Scene." Four superb water buckets represent most faithfully the "Four Seasons"—Spring, with her floral chaplet; Summer, a hay-making scene; Autumn, with her luscious fruits and golden grain; and Winter, with the merry bells and skates: thus uniting the taste and genius of the artist with the taste and skill of the mechanic, making them as they are, twin in labor and value to our community.

A splendid Hose Carriage, with 1000 feet of the best hose that could be made, is connected with this engine. The capss to be worn by the members, who are among the best men in our city, we saw at Mr. Ottignon's in preparation. These will be in keeping and taste with their beautiful weapon of warfare.

This engine and apparatus is now in the warehouse on Market street, and we learn it will soon be shown at a public festival of its members (on the 16th, we believe); then, or shortly after, go into its new house.

This magnificent Engine, Hose Carriage, &c., was a gift to the company, by the Hon. Samuel Brannan, of San Francisco, and surely no better evidence need be offered by a citizen of his real interest for the welfare of the city, than such a gift in so noble a cause; and by the character of its members, its guardians, it will be bravely and nobly used.

And sheets of flame, that make the stout heart quail
Before broad sheets of water soon shall fall;
And storms of raging fire shall break away,
When Brannan men their silver brakes shall play.

Amusements.

CONCERT HALL.—This place of interest and amusement continues to draw very good houses. The representations of all the various movements of the people and the troops are far more accurate than a person would suppose could be done by machinery. It is indeed an excellent representation: the old State House, Boston, Copp's Hill, the troops, firing of cannon and the burning of Charlestown, are all well done, and deserve a liberal patronage. Monte Cristo performs wonders. The exhibition of his trained birds is astonishing, and his ventriloquism admirable.

PACIFIC MUSEUM.—Here we have a most interesting and valuable place to visit, for all persons, grown people and children, there is so much to learn. Here can every one learn lessons that will be of service to them. Father Adams is a wonder of himself—he has accomplished so much in a little time. This museum is enlarging every day, and we are glad to note the increasing interest given by our citizens to the Natural History of California.

THE MINSTRELS.—These dull times, when one is near dead with the blues, we believe a certain cure can be effected by a visit to the "Minstrels." There is fun and frolic enough to drive away every shade of care, cure the dyspepsia, still an aching tooth, make a man forget his poverty, and "sleep well o' nights." We believe in laughter as a sovereign remedy for all kinds of aches of the variety we have named.

JOB'S COMFORTERS.—We have often heard folks say, "you are one of Job's comforters," and supposed of course it alluded to Job, the most patient—and we have no reason to doubt it yet—but we find we have a real Job in San Francisco, and he has a great variety of comforts to offer to his friends, and they are real comforts, too; and we don't believe there is another Job in the country that has as many "good things" as this same Job. Just read about him in another column, where he speaks of his ice creams, jellies, cakes, etc.; then his wedding cakes and cakes for parties. Verily this Job is a nice man to have so many good things for his friends—and then again he invites all his friends—every one, to come and see him; and we hope all will accept his invitations, and go.

CALIFORNIA PRINTING PAPER.—We learn from Messrs. Taylor & Post, that before many weeks we shall have the pleasure to announce that the newspapers of the Pacific Coast can be printed upon home-made paper. This is good news. By the enterprise and energy of this firm, thousands and tens of thousands and hundreds of thousands of dollars will be annually saved to California, and distributed among her working men. Thus, step by step, is our noble State marching on to the rank of a manufacturing State, and consequently an independent State.

AGRICULTURAL.

The Farmer's Drill.

[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 28th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.

Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.

This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

For full particulars address
M. G. GRIFFITH, Agent, Diamond Springs, Cal.;
Or to C. FINKBONER
(Of the firm of G. W. Stewart & Co.),
Grain Dealers, San Francisco.

v7-1 3m

L. P. & W. F. DODGE'S DOUBLE ACTING PUMP.

(Patented June 7th, 1853.)

THESE Pumps are double acting, and combine both the Suction and Force Principles. The Pistons are of the best bell metal composition, making them available for use in either hot or cold liquids.

The Cylinder is without divisions or chambers, has no valves at the eduction port, and is bored out perfectly true and smooth. From the construction of the cylinder and water passages, the pistons require no packing, being fitted perfectly to the cylinder. Two important evils in Pumps generally, are thus overcome—viz: the amount of power required to work them, and the wear of the packing. The cylinder and pistons being perfectly true and smooth, it naturally follows that there should be less friction, and, consequently, less wear, than in pumps generally.

The water enters the cylinder upon its side, at each end alternately, passes through the piston heads, and is discharged through the round air-vessel in the center of the pump. These pistons are each furnished with a valve, connected in such a manner that both must operate simultaneously, one valve opening at the precise moment the other closes; consequently these pumps may be run at higher speed than pumps generally.

These pumps have received numerous Medals, Diplomas and commendatory notices from various State and County Fairs, including Medal and Diploma at the Crystal Palace Exhibition in New York.

The power of a single individual applied to the size usually furnished for family use, is sufficient to draw water from a well twenty-five feet deep, and throw it upwards of fifty feet from a hose-pipe, rendering it a very efficient FIRE ENGINE, ready for use at any moment.

Circulars containing full information relative to size, prices, &c, may be obtained by addressing the

[PREMIUM ORNAMENTAL NURSERY.]

Mountain View Nursery,

Three-Quarters of a Mile from San Jose.

THE Proprietor offers for sale the present season a large stock of fine Fruit and Ornamental Trees, Vines, Roses, Evergreens, and every variety of Garden Plants.

Particular attention is paid to the cultivation of Native Trees, and particularly the Evergreens of California, which are as fine as the world can produce.

A very fine collection of extra fine Roses are worthy of especial notice.

The Proprietor, having been in previous years connected with his brother in the United States Nursery, on the new Mission Road at San Francisco, and having former experience, is confident of pleasing all who may favor him with their patronage, which is respectfully solicited.

WM. O'DONNELL.
v6-21 3m

FRUIT TREES! FRUIT TREES!!

Oak Grove Nursery, Alameda.

THE subscriber, whose stock consists of the finest varieties of FRUIT TREES, imported from the Nurseries of HOVEY & CO., Boston, and now from one to four years old, many in bearing the present year, consisting of—

	20 varieties.
Dwarf Pears	12 "
Plum	6 "
Apricot Plum	7 "
Foreign Figs (now in fruit)	

All the best varieties of Apple, Peach, Nectarine, &c.
3,000 Los Angeles Grape Vines, now in fruit, three years old.
Strawberry Plants, &c.

Persons wishing to furnish their grounds will do well to visit the above Nursery and select for themselves, bearing in mind that to insure the healthy growth of a tree, it should be transplanted in the fall.

For particulars inquire of S. L. PALMER & CO., agents, corner of Washington and Davis streets, San Francisco, or to
v6-10 3m GEO. B. COOK, Proprietor.

United States Nursery,

On the New Mission Road, San Francisco.

THE Proprietor of this large Nursery and Garden desires to call the particular attention of the friends of Horticulture to the collection now offered, among which are the following:

Fruit and Ornamental Trees;
Roses, of every choice variety;
Green-house Plants, and Garden Plants.

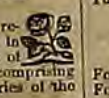
Together with every article needed in Orchard, Garden, Greenhouse, Parlor or Garden.

The undersigned would most respectfully invite purchasers to visit his Garden and Greenhouses. Having been long established in the business he is confident he can furnish everything desired, as agreeably as any other establishment.

JAMES O'DONNELL.
v6-21 tf

Shell Mound Nurseries AND FRUIT GARDENS,

Near Brooklyn, Alameda county, directly opposite San Francisco.



THIS well known establishment is now prepared to offer to its patrons and the public in general, an extensive and varied assortment of Fruit and Shade Trees, Shrubs, Plants and Vines, comprising almost every article usually found in the Nurseries of the Atlantic States.

Our stock of Apple, Pear, Peach, Plum and Cherry Trees, we believe is of a quality unsurpassed in California.

Catalogues, with prices annexed, will be furnished on application.

All orders, accompanied by remittances, will receive prompt attention. Please address
R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco;
Or, JASON L. SANFORD, Agent, Brooklyn.

P. S.—We expect to receive in December from 50,000 to 70,000 Trees, Shrubs, Plants and Bulbous Roots, from the East, on the arrival of which a supplementary catalogue will be issued. v6-18 3m

Pioneer Nursery.

THE undersigned, proprietor of this now well established Nursery, to which was awarded the First Premium by the State Agricultural Society at its last Annual Fair, announces to his friends and patrons that he is prepared to offer them, the present season, a collection of Fruit and Ornamental Trees equal to any in the country, and far superior to any heretofore offered.

Having had in bearing last year, forty-seven kinds of Apples, and having in bearing the present year, about thirty-five varieties of Peaches, added to the knowledge we have acquired by comparing them with other varieties grown in various localities, we have been enabled to ascertain with certainty what kinds are worthy of culture, and such varieties only do we offer to the public the present season.

We call your attention particularly to our Seedling Peach, named by the Academy of Natural Sciences, "Myers' Rareripe," which we offer this season for the first time. The following certificate will speak for itself:

ALAMEDA, July 25th, 1856.

The subscribers having seen and eaten of the new variety of Peach grown by A. H. Myers, in his "Pioneer Nursery," Alameda, and by the Academy of Natural Sciences of San Francisco named "Myers' Rareripe," do cordially and unhesitatingly pronounce it a most valuable acquisition to the Pomology of our State, in regard both to its early ripening, and its melting, luscious qualities, being in these respects superior to any variety of Peach that we have yet met with on this coast.

George Lee, Lee's Garden, Oakland.
Henry Gibbons, M. D.
N. W. Palmer, firm of Sonntag & Co., Horticulturists.
T. J. Nevins, Amateur Gardener.
A. M. Crane, County Judge.
Wm. Sherman.

We speak to our friends and patrons thus early, that they may be apprised of our ability to supply them with all the desirable varieties of Fruits, and thus save the trouble and expense of sending out of the country for Trees; and we can assure them that time and money will be saved by giving us a call.

Our stock embraces—

40,000 Apple Trees, forty varieties, one, two and three years old;	
30,000 Peach Trees, in bud, best varieties;	
4,000 Peach Trees, two years old,	"
1,000 Pear Trees,	"
1,000 Cherry Trees,	"
1,000 Plum Trees,	"
1,000 Apricot Trees,	"
1,000 Nectarine Trees,	"

Also, Almond, Fig and Quince Trees;
25,000 Currant Bushes, with a sprinkling of everything rich and rare, usually found in a well regulated Nursery.

We particularly invite our citizens to our Nursery and examine for themselves before purchasing elsewhere. Information respecting the best varieties of fruits, and the planting and pruning of them cheerfully rendered.

A. H MYERS,
v6-19 3m Pioneer Nursery, Town of Alameda, Alameda Co.

Smith's Pomological Gardens AND NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast.

Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear,
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of extra size Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—1,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

☞ Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.
v6-19 3m A. P. S.

EDUCATION.

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by CORNELIUS J. FLATT, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17TH of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS: PER MONTH

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	$25 00

Private arrangements will be made for Instrumental Music when required.

No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.

For further information or references, address the Principal.
C. J. FLATT.
v6-24

Young Ladies' Seminary, Benicia.

MISS MARY ATKINS, : : : : : : PRINCIPAL.

THE School Year of this Institution is divided into two terms of five months each; but the term commencing January 5, 1857, will close May 1st, 1857, in order that the semi-annual vacations may take place hereafter in May and October.

At the close of each term there will be a thorough examination of the pupils in all of their studies.

The Course of Instruction is such as is usually pursued in High Schools, and also includes the accomplishments of Drawing, Painting, Vocal and Instrumental Music.

The government of the school is gentle, but decided. A daily account of the recitations and deportment of each pupil is sent, monthly, to the parents, who are thus regularly informed of the progress of their daughters.

All of the pupils board either with their parents or at the seminary, and are under the special care of their parents, or of the teachers of the Institution.

The School is open to inspection at any time, and friends are cordially invited to visit it; but no pupils can receive calls from any persons, excepting those introduced by the parents and guardians to the principal.

TERMS: PER MONTH

Tuition in the Higher English Studies	$8 00
" " Common "	6 00
" " Music and use of Instrument	10 00
" " Ancient and Modern Languages	5 00
" " Drawing and Painting	6 00
For Board (per week)	25 00
For Washing (per session)	

No extra charge will be made for Vocal Music or Embroidery: neither are the pupils required to furnish their rooms, bedding, &c.; but each pupil must have every article of clothing distinctly marked with her name.

Payments are to be made invariably at the beginning and middle of each term, in advance.

THE "HORTICULTURIST" AND Journal of Rural Art and Rural Taste.

COMMENCED BY A. J. DOWNING,

Author of "Landscape Gardening," "Designs for Cottage Residences," "Fruit and Fruit Trees of America," "Country Houses," &c.

Edited by J. JAY SMITH, Editor of the North American Sylva.

THIS popular publication, which is gradually extending its influence throughout the country, and is becoming indispensable to the tasteful Gardener, the Fruit Culturist, and the Floriculturist, will be continued under the editorship of J. Jay Smith, whose ability and taste in matters of country life are highly appreciated through the country.

The cultivation of the beautiful, both in Nature and Art, is justly esteemed an important element in education, and recommends itself to the attention of all who wish to make their dwelling and grounds attractive, and to surround themselves with those luxuries and adornments that spring from the fruitful bosom of the earth when cultivated by the practical hand. The typographical execution of the HORTICULTURIST is designed to be an index to its contents—neat, chaste and elegant. It embraces within its scope—

I. THE DESCRIPTION AND CULTIVATION OF FRUIT AND FRUIT TREES—a subject of vast importance, and in which we are already more interested than any other people.
II. THE DESCRIPTION AND CULTIVATION OF FLOWERS AND FLOWERING PLANTS AND SHRUBS, from the most delicate and tender to the most hardy and robust.
III. TO THE DESCRIPTION AND CULTIVATION OF ALL EDIBLE PLANTS, which are, or should be, grown in our gardens.
IV. TO GARDENING AS AN ART OF TASTE—with Designs for Ornamental or Landscape Gardening.
V. TO RURAL ARCHITECTURE—embracing Designs for Rural Cottages and Villas, Farm Houses, Lodges, Gates, Vineries, Ice Houses, etc., etc.
VI. TO ARBORICULTURE—or the Planting and Culture of Forest and Ornamental Trees.
VII. TO BOTANY AND ENTOMOLOGY—so far as these branches are connected with the general subjects to which the work is specially devoted.

The extended and valuable correspondence of THE HORTICULTURIST presents the experience of the most intelligent cultivators in America; the superior illustrations, and the instructive and agreeable articles from the pens of the editor and contributors, make it eagerly sought after by even the general reader interested in country life. To all persons alive to the improvement of their gardens, orchards, or country-seats—to scientific and practical cultivators of the soil—to nurserymen and commercial gardeners, this Journal, giving the latest discoveries and improvements, experiments and acquisitions in Horticulture and those branches of knowledge connected with it, will be invaluable.

A New Volume (12th year) commences with the January number for 1857; and it will be the constant aim of the editor and publisher, by every means in their power, to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style of the periodical press, each number containing 48 pages, embellished with a frontispiece and several other original and well-executed engravings. At the end of the year it will make a volume of six hundred pages, beautifully illustrated with over 100 engravings, many of them drawings of fruit and flowers from nature. These volumes, if taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature.

TERMS—Two Dollars a year—Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the art—Price, $5.

☞ All subscriptions must be addressed to the Agents, or to,

IMPORTANT TO INVENTORS!

LOW, HASKELL & CO, SOLICITORS OF PATENTS AND PUBLISHERS OF THE "INVENTOR."

304 Broadway, New York,

PREPARE the necessary Drawings and Papers, and prosecute to a successful issue, applications for Patents in this country and in Europe. Inventors and others desirous of securing Letters Patent, need not incur the expense of a visit, as by sending a sketch of their invention, with a proper description, their business will be faithfully transacted. Fees moderate and no charge for original examinations. Rejected applications receive especial attention.

Subscriptions to the "Inventor," an Illustrated Monthly publication, for the Mechanic and Artisan, the Engineer, Manufacturer, Agriculturist, Inventor and Patentee,
v6-19 tf ONE DOLLAR A YEAR.

Peach Trees! Peach Trees!!

25,000 fine Peach Trees of one year's growth;
50,000 Dormant Buds, consisting of *thirty varieties*;
PEAR, APPLE, PLUM and CHERRY TREES, of very best quality;
GRAPE VINES, extra quality;

Nurserymen and Tree Dealers supplied at liberal discount from regular prices.

Purchasers are invited to call at the Nursery of the subscriber before purchasing elsewhere.

Watts on the Mind	

The Mathematical Works of Professor Davies are too well known to require special notice. They are the text-books (in connection with those of Professors Church and Bartlett) of the United States Military Academy at West Point, and nearly all the colleges in the United States. The elementary Course of Mathematics, consisting of the revised editions of Arithmetics, Algebra, Geometries, &c., and recommended by the superintendents of public instruction of Michigan, Illinois, Missouri, Wisconsin, Minnesota and North Carolina, and are used in the best schools and academies throughout the United States. Clark's English Grammar, Willard's School History, Parker's School Philosophy, Fulton and Eastman's Book-keeping, and Monteith's and McNally's School Geographies are also the favorite books in each of the above named States, as well as in all parts of the country where they are used. v7-4 2m

PACIFIC MUSEUM,

Corner of Clay and Kearny streets.

INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!

THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Worf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montes.

☞ A full Brass Band is in attendance every evening.
Open every day and evening (Sundays excepted).
* * Admission 25 cents during the Day, and 50 cents in the Evening. v7-2

CONCERT HALL.

Corner of Clay and Sansome streets.

THE GRAND MOVING DIORAMA OF THE
BATTLE OF BUNKER HILL,
AND
THE CONFLAGRATION OF CHARLESTOWN,

Is on exhibition EVERY EVENING (Sundays excepted), at
CONCERT HALL.
Also, the Celebrated Magician and Ventriloquist,
Monte Cristo,

Whose performances in Ventriloquism and the Magic Art astonish the world. During the peformance he will introduce his favorite Automaton, LITTLE BOBBY, who will converse with the audience.

The whole to conclude with the beautiful dioramic scene of the
FAIRY LAND AND PALACE OF THE FAIRIES.

Tickets, 50 cents; Reserved Seats, $1; Children, half-price. Doors open at 7 o'clock; Performance commences at 7½. Open every evening (Sundays excepted). v7-3

THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOLUME VII. SAN FRANCISCO, CALIFORNIA, FRIDAY MORNING, FEBRUARY 20, 1857. NUMBER 6.

The California Farmer
AND JOURNAL OF USEFUL SCIENCES.

By WARREN & CO.

PUBLISHED EVERY FRIDAY MORNING,
Simultaneously at Sacramento and San Francisco.

Office—*In Fourth street, between J and K, Sacramento.*
—No. 130 Washington street (up stairs), San Francisco.

TERMS.—*Five dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.*

☞ *Advertisements in this journal will have a circulation and notice unequaled.*

☞ **Advertisements and Subscriptions must be paid for in Advance.**

THE AUDUBON OF THE PACIFIC.

THAT California has shown herself to be the nursing mother of genius, enterprise and skill, and of extraordinary men, her history will prove. Our purpose is to present one of the many, and one we esteem of the extraordinary ones, and in doing this we shall give matters of history.

The name of Audubon has attained a high place in history, and most deservedly so; his works reflect honor upon him and glory upon our country, and the name which we have linked with him has already won honor sufficient to show it to be worthy to be thus associated. We give a thrilling sketch of Audubon, first, to show that the name we introduce as the "Audubon of the Pacific," has, by his Life and Adventures, exhibited a most striking parallel case to Audubon in his travels and explorations.

John James Audubon.

[BORN IN LOUISIANA, MAY 4, 1780.]

An elegant copy of the "Birds of America," was received by the Royal Academy of Sciences of Paris. Baron Cuvier, to whom it was referred, said, in his report, "It can be described only by calling it the most magnificent monument art has ever raised to ornithology." Audubon was born of French parents, near New Orleans, and is now past his 70th year. His father, an enthusiast for liberty, was with Washington at Valley Forge; and the Audubon family still possess the portraits of both, painted in the camp—that of Washington being the first ever taken of him. At a very early age, Audubon was sent to France, and educated in art and science, under the best masters, among whom was David.

The love of birds, which has been the passion of his life, manifested itself in infancy; and when he returned from France, he betook himself to his native woods, and began a collection of drawings, which made the germ of the "Birds of America." His father gave him a plantation on the rich banks of the Schuylkill (Pa.), and luxury and fortune offered their blandishments to wean him from his love of adventure. But his heart was in the forests; and in 1810, with a young wife and infant son, and his unfailing rifle, he embarked in an open skiff on the Ohio, to find a new home. The mellow lights and shadows of our Indian summer had fallen along the shores of that queen of rivers; at long intervals, the ax of the squatter was beginning to disturb the solemn reign of Nature.

He settled in Kentucky; and in the central region of that vast valley through which the Mississippi rolls into the sea, he pursued his studies and roamings. We can hardly give an idea in these few words, of the forest and prairie life he led. He has found space to do it but imperfectly, in his five ponderous volumes of Ornithological Biography. He has spent more years in the forest than most men live. Among the great lakes of the north, he sees beyond the reach of his rifle a strange, gigantic bird, sweeping over the waters. He hunts for that bird ten years, and finds it again three thousand miles from the spot where he saw it first. Meanwhile, he has been chilled with eternal frosts, and burned with perpetual heats. He has slept many nights across branches of trees, waked by panther screams, and many nights he has passed in cane-brakes, where he did not dare to sleep. He has seen the knife of the savage whetted for him—stepped on venomous serpents—started the cougar from his secret lair—swam swollen streams, with his gun, ammunition, drawings and journals lashed on his head—on equatorial rivers, alligators stared at him as he landed—in polar regions, the water turned to ice as it fell from his benumbed limbs when he struck the bank—his tongue has parched with thirst on deserts, and he has laid himself down famishing, to wait, like Elijah, till he was fed by the birds of heaven.

This was his history, during the life of a generation. And yet, through this long pilgrimage of peril and suffering, which Cæsar would not have borne to have heard the tramp of his legions in three quarters of the globe, his courage never cooled, his reverence for God, whose illimitable universe he was exploring, deepened the longer he gazed. Nor did he lose a throb of humane feeling for civilized man, from whose habitations he had exiled himself. And yet this man had nobler pleasures, as well as nobler hardships, than other men. He had gone with one of his sons—both of whom, from boyhood, have been his forest companions and scholars—and with other young men of Boston, since distinguished, on a voyage to Labrador for new birds. The expense would have built a beautiful villa. A pleasant morning they scared from her nest the Black Poll Warbler! "The enormous expense of my voyage," he says, "was refunded in the sight." A prouder triumph was reserved for the day; he at last captured the Sea Eagle. "Not even Herschel," he writes, "when he discovered the planet which bears his name, could have experienced more rapturous feelings. As the new world gave me birth and liberty, the great man who insured its independence is next to my heart;" and therefore he called the noblest of eagles after the noblest of men. Other ornithologists had painted their birds after they were stuffed. Audubon made accurate drawings of his in the forests, before the plumage had lost its brilliancy, or the muscles their natural expression. He has exhibited in perfection the highest attributes of zoological painting, never before attempted. He has pictured the passions and feelings of birds, as tenderly and truly as Claude Lorraine painted trees, flowers and skies. And so, after many years, his portfolio was enriched with a thousand finished drawings. His collection was entirely destroyed! "The burning heat," he says, "which rushed through my brain, when I saw my loss, was so great, I slept not for several nights, and my days were oblivion. But I took up my gun, note-book and pencil, and went forth to the woods again, as if nothing had happened. I could make better drawings than before; in three years my portfolio was filled."

Hitherto he had wandered, studied and painted, only to gratify his love of nature. In 1824, Lucien Bonaparte proposed to buy his drawings. He resolved to publish them himself. It could not be done in America; he landed in England, a stranger. Roscoe received the wondrous woodman with open arms. His drawings were exhibited in Edinburgh; men of rank and taste extended to him hospitality; he passed the severest scrutiny of art and learning, and stood by the side of Herschell, Cuvier and Humboldt, as a father of science, and in art a master without a rival. With Scott, Brewster, Wilson and Jeffrey, for companions, he began the publication of his magnificent work. It was completed in London, in fourteen years, and his fame was established. One hundred and seventy five subscribers, at $1000 each, most of them obtained by himself in person, and eighty of whom were his own countrymen, remunerated his vast undertaking. The learned societies of Europe proffered to him their honors; but he received with more pride than all, the crown of the Royal Society of London. He published a synopsis of his great work at Edinburgh; and finally, in 1839, weary with years and covered with honors, he returned home, bringing with him all his original drawings. He republished the work in New York, in royal octavo, and with Dr. Bachman, the eminent zoologist, began another work, "The Quadrupeds of North America"—which was completed last year, with applause and success. In speaking of these works, particularly the last, mention should be made of his two sons, whose accomplishments in art and science have been so useful to their father. The ornitholoigist is now reposing in his grave, and but few men have ever attained a world-wide reputation such as his. It is not in the keeping of history alone. From every deep grove, the birds of America will sing his name; the wren will pipe at our windows; the oriole carol it from the meadow grass; the turtle-dove roll it through the secret forests; the many-voiced mocking-bird pour it along the evening air, and the bird of Washington, from his craggy home far up the Rocky Mountains, will scream it to the tempests and the stars.

—

We now give a notice which appeared in the St. Louis Journal in 1846, over the name of one whose life and adventures are so similar to Audobon, that we have thus associated them, and it will be seen by all how most strangely singular these events have occurred. We give also, the editorial notice of the St. Louis papers at the time, and similar notices appeared in many journals of the day, for the gentleman stood high among all who knew him:

Ho for California!

At the suggestion and desire of a number of my friends, who propose emigrating with me to California, and deeming it actually necessary that some one should take the lead, whereby we may be able to organize an expedition and preserve good order while on the route, I have consented to take the charge upon myself, and pledge my life to the safe conduct of those who are disposed to join us in our journey to that country. Should any one of the company however, be considered more efficient than myself, by a majority at the *rendezvous*, I shall be most happy to resign him the duties of the command.

As it is my intention to take my family with me, which is quite young, I sincerely hope that we may have an orderly and well organized company. Those who design going should be at Independence, on the Missouri river, by the 15th of April next, as that will be the time of our departure from that place.

Emigrants should be well provided with arms and ammunition, good teams of mules or oxen, and provisions for at least six months. It is better not to be burdened with any heavy and unnecessary articles of house furniture, but good assortments of farming implements, useful tools, garden seeds, and such things only as will be serviceable in a new country, and not easily to be had in California.

A good interpreter and pilot will be wanted for the expedition. A. J. GRAYSON.

St. Louis, Feb. 20, 1846.

EXPEDITION TO CALIFORNIA.—We refer our readers to the announcement, in another column, of a proposed expedition to California. Mr. A. J. Grayson, an esteemed friend, will take charge of the emigration, subject to the pleasure of the company when it shall have assembled at Independence, previous to its departure. He is eminently qualified for such a responsible station, being a young man of enterprise, courage and determination—one who has not been accustomed to the "soft lap of luxury," but who has rather courted, from his youth up, the excitement and dangers of an adventurous life in the extensive wilds of the Southwest—a gentleman whose rifle is as true to its aim, as his heart is true to the principles of honor.

Under Mr. Grayson's advice and direction we look for the organization of a numerous and highly respectable expedition to California.—[St. Louis Reveille.

We here present Col. A. J. Grayson, as the leader of a band of hardy pioneers to California, and as a brief introduction of his adventures, we give a letter written to his brother-in law, after his arrival in San Francisco, in 1847, giving a brief description of his perilous journey. Other letters, with various valuable memoranda, we shall give in future sketches of one to whom we have given the honorable position at the head of this article:

Col. G. to his Brother-in-Law.

SF. FRANCISCO, California, Feb. 22d, 1847.

DEAR GARRETT: I have at length found time to write to you, which is a job I have had in view for a long time, but until now have not had sufficient time to perform it. My last letter was, I think, written from Fort Bridger, on Black's Fork, at the head of Green River, and I hardly know whether to give you a history of our journey from that place onward, or merely to give you the news about California; but as there are many things which may be interesting to you, I will give you a graphic description of that part of our journey which was the most difficult and troublesome of the whole route.

At Fort Bridger we met with Mr. L. W. Hastings, of Sutterville, Sacramento county, who had discovered a new route by the way of the great Salt Lake, which was represented to be a better and nearer route by 250 miles. This news created some excitement among the emigrants: some were for going the new route, without reflecting, whilst the more prudent were for going and sticking to the old trail by Fort Hall. I, for one, consulted Capt. Walker,* who happened to be at Fort Bridger, and well acquainted with both routes, and also a man whom I could believe; so I took his advice and went the old trail, together with a respectable portion of emigrants, among whom were Gov. Boggs, Boon, &c.

On the 26th July we parted with a number of our fellow travelers who were going the near route, and with heaving hearts rolled on our dusty and rugged way. After leaving Fort Bridger, by several days hard driving over a very dusty and bad road, we succeeded in passing over Bear River Mountains into Bear River Valley, where we again had a most delightful road to the Soda Springs. Bear River Valley is one of the most beautiful ones through which we had passed, and, I think, very susceptible of cultivation. The surrounding mountains are very wild and beautiful, covered with trees and various kinds of fruit, such as berries, and full of game. The river is a very pretty stream and abounds with the finest trout: it flows into the Great Salt Lake. I was here separated from my company one night and two days, in consequence of not being able to get in sooner from hunting. My wife and child were with the train, and were most anxious for my return; and the company were very uneasy about me, for the Indians were very numerous. We saw several of the Snake tribe of Indians in the valley, who were very friendly to us, and with whom we traded some. After traveling for several days over this delightful valley, we at length arrived at the Soda Springs, a place we had longed to see, and a more beautiful spot does not exist in this world. Groves of cedar and pine are scattered all around them. The springs burst up out of the solid rock of volcanic lava, some of which is pure soda water—besides there are other mineral springs. Here we rested one day and drank soda water to our stomachs' content.

From these springs we leave the valley and pursue our course in a northwest direction to Fort Hall, over a very dusty and rugged way. We, however, reached Fort Hall safely. Here we met with a Mr. Applegate, just from Oregon, who came that far to meet the emigration, to conduct them through a new route which he had discovered over the Cascade Mountains, to Oregon. This was good news to the emigrants, as it was represented as being a nearer and better route of course. This caused a good many to go to Oregon who were bound for California, as they thought they would reach there before they could California. But from the very nature of the route it led me to believe it must be a very difficult one, if not impassible for wagons (which I have since learned to have been the case). This route continues on the California trail nearly to the California Mountains, where it leaves in a northwest direction over two lofty ranges of mountains—the Cascade and Umqua Mountains.

From Fort Hall we pursued our course in almost a due south direction, aiming to strike the head of Mary's river. The way became very arid, mountainous and dusty, until we reached the head of Mary's river, which is nothing but a dry branch, with occasionally a hole of putrid water. Here the road is a mere level, but disagreeably dusty and barren. The stream, if so it may be called, runs through one of the most barren and desolate regions on earth; it is indeed the great desert of America, the region of perfect desolation. The very Earth seems to have been burnt up by Volcanoes; it has the appearance of one immense heap of ashes, and nothing here presents itself, but dry arid plains, or high mountains, thrown together in wild and confused heaps. And even the hateful sage, here seems to have been stinted in its growth; for eight hundred miles the aspect is all the same; no living animal except those peculiar to it can exist here. And day after day in our mountainous marshes over this unearthly desert it seemed that we were traveling in another world.

After proceeding down Mary's river nearly to the Sink, where it disappears entirely, we met with a new species of trouble. The Indians here stole a number of our cattle and shot a good many with arrows poisoned which they left. Our company was quite small at that time, and could only muster a few fighting men. About ten of us however followed them. We soon came up with the main body of them at their own village, where they numbered upwards of three hundred fighting men, and all arrayed for battle, whooping and yelling all kinds of defiance. Though their numbers were much stronger than ours, we had no idea of backing out; they had raised the tomahawk against us, notwithstanding our kind treatment to them when they came about our camp. We advanced upon them with the determination to teach them a lesson. Four of our men were mounted and the balance on foot; we charged upon them as fast as we were able, but before we got within rifle shot they all disappeared behind the rocks, like so many squirrels into their holes. We still advanced upon them until within a few paces of where they were hid, when they charged upon us with all the fury of savages. We met them however, with steady aim, and every shot killed an Indian. They fell back in the rocks again, and continued to pour their arrows at us faster than the hail from the clouds. We fought them from behind rocks all day, shooting them through the head whenever we could catch one peeping over the rocks, until we finally routed them, after killing eighteen of their number. We also recovered the most of our cattle. We lost one on our side—one man killed, three badly wounded and others slightly. One horse was also killed. I had the honor that day of leading the company. Our valiant little band, many of whom I feel much attached to, have been with me in all the California war also.

Next day we proceeded slowly on our journey uninterrupted until we arrived at the Sink of Mary's river, where we again had nearly all our cattle stolen from us. We followed them next morning, but recovered only a few, which were so badly shot with arrows as to be rendered entirely of no service to us. I lost half of my team, and some of us were rendered almost helpless in the way of traveling, and the most difficult part of the road was yet to be encountered. Tired of wagoning, and anxious to complete the trip, I determined to leave my wagon, or give it to one of our company to bring my things through the balance of the trip, which he did, leaving his in its place. Half of my team being stolen, I was actually compelled to do it, as many others done the same who lost their cattle. After packing my horse with the necessary provisions, blankets &c., and mounting my wife and little Ned on top of the whole, footing it myself, we set out alone over the trackless desert for California. Day after day we traveled over this trackless desert, with nothing to relieve the eye or gratify the sense. Nothing to break the monotony, or awaken the stillness of the eternal solitude, as in painful silence we marched on our lonely way.

We at length came in sight of the California Mountains, which are covered with a dense forest of green trees—trees once more! Oh! how the very sight of them cheered our worn out spirits. As we hurried on to get among them, how gladly did we hail the change. As we entered the majestic woods the breath of the forest was animating to us. What a feeling of freshness diffused itself into our whole being as we enjoyed the pleasures of the pathless woods. We encamped that night upon a small, clear brook, whose waters were sweeter than any we had drank for a long time; the birds were singing all around us, and thousands of squirrels were hopping from branch to branch, whilst little Ned made the woods ring with his joyous laughter. What a change, from the wild, wide wastes over which we had been traveling for months. Beneath the shelter of a huge pine we made our bed, and were soon lulled to sleep by the gentle sighings of the wind, as it passed through its branches, with the sweet satisfaction that we had no more deserts to pass, and these were the last mountains over which we had to travel before reaching our resting place. The California Mountains are covered with a dense forest of the largest timber I ever saw, and reach clear into the California plains. The mountains are very rugged, and steep ascents, and it looks impossible for wagons to pass; yet they do, but with immense difficulty. At the main dividing ridge the wagons have to drawn up a hight of 300 feet by pulleys.

At length, on the 12th day of October, 1846, from the top of the last hill we hailed with wild delight the plains of California. Never had my eye rested upon so beautiful a scene. I hurried on to the settlements: left my family with Gen. Gaudeloupe Vallejo, who has been General of California, under the Mexican Government, and is one of the richest and most refined gentlemen in California. He has always been favorable to our government, and a great friend to the Americans. His family is very much respected by all; and he lives on the north side of the bay of San Francisco. He has a very splendid ranch, and his house is well furnished. He has a large library, and, among other things which I did not expect to find in this country, has a fine Boston piano. I left my wife there, and volunteered my services in defence of California against the Mexicans or Californians. In a short time I was honored with a commission, from Commodore Stockton, of Lieutenant, in Capt. Madox's company of mounted riflemen, where I continued to serve until the final treaty was made between the two parties. I must also state that I was honored as a bearer of dispatches through the enemy's country as many as three times. Once from Com. Shubrick to Capt. Mervin, once from Capt. Mervin to Capt. Nursden, and once from Mervin to Shubrick—in which I performed all expeditiously and with success, and have received ample reward and thanks.

We had several skirmishes in the country, but no very hard fighting: some few have been killed on both sides. The country is now all as peaceable as Louisiana, and the Stars and Stripes wave proudly over the land. The weather is now very fine. The trees are all putting forth their leaves, and thousands of flowers cover the plains and hills. The farmers are all busy cultivating their farms. The winter has been very mild; no ice nor snow, and seldom frost. I must now say that I have not been disappointed in the country, It is even better than I expected, and my future prospects are much brighter than they have been for a long time. My wife is delighted, and as cheerful as ever. She is in excellent health; and Ned is as fat as he can be. I weigh more than I ever did before—dressed in buckskin, and feel as independent as a wood chopper, with a pocket full of cash at that! I have just returned from the long campaign in which I have been engaged, and will now proceed north of the bay for the purpose of laying my claim to a tract of land on the bay, which in a few years will be an independent fortune itself. The country is all that man could desire, and the climate is certainly delightful—no sudden changes. There are always a good many ships and vessels in the bay, which causes this place to be a very busy one. I have purchased a lot in it, which I think in a few years will be valuable, as the place is improving rapidly. We are about organizing a civil government. Gen. Kearny will be governor of the territory.

I have span out his letter now, until I expect it will be a bore for you to read it, therefore I will bring it to a close. My wife wishes to write a few lines in it. You can circulate it among those who would like to hear from us.

I remain yours every truly,
A. J. GRAYSON.

P. S.—I forgot to state to you that a greater portion of the emigrants who took Hasting's route were not able to pass the California Mountains before the snow fell too deep. You will see by the papers I send you, their extreme suffering. And also those who took the new route to Oregon have shared the same fate. So we have learned.
A. J. G.

—

[We give a brief sketch of a thrilling scene among the Indians, which occurred on the route, as an evidence of the pioneer's life.]

Whilst traveling down the Humboldt river, about five days journey from the Sink, we came upon a company of five or six wagons, bound for Oregon, encamped upon the banks of that sluggish stream, they having had all their cattle stolen, the night previous, by the Indians. This was caused, I have no doubt, by their ill-treatment to the poor savages, as they came about the camp, prompted by curiosity, or to obtain some small article of civilized manufacture, many of whom had never seen a white man. At any rate, we had been on very friendly terms with these "*owners of the land*," previous to this incident; but now, alas, the war-whoop was resounding among these dreary and desolate wilds, and for the first time in all our long and laborious march, our hand was raised against the Indian, and his against us, and this, too, all brought on by the imprudence of the Oregon emigrants. But, as duty prompted, we volunteered to help them recover their cattle. About three hundred Indians were guarding them, in a tule marsh upon the opposite or west side of the stream, yelling defiance to us, as much as to say, 'Come and take them, if you can."

A party of about twelve or fifteen of us started

Valuable Flock of Sheep.

We have received the particulars of a Sheep-shearing Festival from the Middlebury (Vt.) Register Extra, and we present it to show the value of a good flock of sheep and to call the attention of those who have large Ranches and plenty of room, where they can make a fortune and benefit the country. There will always be a market for wool. When shall we have a Sheep-shearing Festival in California?

The annual Sheep-shearing Festival of Mr. A. L. Bingham, the noted breeder of French Merino sheep, was this year held at Middlebury, Vermont, on the 17th and 18th days of June.

The first day was fine and a large concourse of people assembled to witness the proceedings. The shearing took place in an open building on the grounds of the Addison County Agricultural Society. Eight vigorous young men were employed in the shearing, and their labor was cheered from time to time by the applause of the spectators, and occasional music by the Rutland Band, under the leadership of Mr. Farr.

The shearing commenced about ten A. M. The sheep brought on were in excellent order, and were deeply laden with wool. Thirty-eight Full-blood French Merino Ewes; nine Full-blood French Merino Bucks; and fifteen Half blood French and Spanish Merino Ewes, all yearling sheep of March last, were shorn, and the body and fleece of each sheep were weighed in presence and under the inspection of all the curious among the spectators. Below we give the number and weight of body and of wool of each sheep shorn:

Num.	Weight of body.	Fleece.	Num.	Weight of body.	Fleece.	Num.	Weight of body.	Fleece.
1	64½	18¼	14	65¾	15½	27	73½	20
2	66½	17½	15	70	15¼	28	64	16½
3	67	19½	16	82	17	29	81	19¾
4	93	18	17	81	18¾	30	92	17
5	57	17	18	81	15	31	77	16¼
6	74	16	19	73½	14¼	32	88	18½
7	66	18½	20	77	20½	33	123	22½
8	72	18¾	21	82	18	34	63	22
9	69	18¼	22	61	14¾	35	67½	18
10	66	15	23	63	15¼	36	86	17
11	66½	16¼	24	78	17¾	37	93	19¾
12	79	16¾	25	74	17½	38	85	17¾
13	75	15¼	26	91	19			

Full-blood French Merino Bucks.

1	87	19½	4	78	18	7	107	22½
2	99	19¼	5	106	17	8	89	18¾
3	101	21¾	6	77	18	9	105	20¾

Half-blood French and Spanish Ewes.

1	50	11¾	6	63	13½	11	50	13
2	60	13	7	58	13½	12	50	13¾
3	60	15	8	63	14	13	56	12¾
4	59	15	9	45	12⅜	14	51	11⅜
5	42	14	10	52	10¾	15	60	15½

The average weight of the body of the Full-blood Ewes was about 76 pounds; of fleece, 17 pounds 10 ounces.

The average weight of body of the Bucks was 94½ pounds; of fleece, 19 pounds 7 ounces. The average weight of Half-bloods was 55 pounds 15 ounces; of fleece 13 pounds 4½ ounces.

These facts, attested as they are by many witnesses, are worth volumes of speculation on the comparative worth of these sheep; and evince the right sort of enterprise in their breeding and management.

Mr. Bingham had advertised far and wide for competition in this shearing, but found no competitors. He may be justly placed at the head of the particular interest to which he has devoted himself, and is entitled to retain that position until some man can show himself in advance of him. It is understood that Mr. Bingham intends to keep up this festival, and is desirous at the next year to extend to his brethren in this department of agriculture the same offer that he made last year. It would add much to the interest of the Exhibition, if breeders would allow themselves to be stimulated to a brisk competition.

In connection with the shearing, Mr. Bingham invited all the owners of fine horses in this section to be present with their animals, and offered several premiums for the best which should be exhibited.

Accordingly, on the second day, a large number of the finest horses in this or any other country, assembled and were exhibited upon the track near the place of shearing. Two classes of premiums were established: one for speed merely, and the other for all points.

A Hambletonian horse of G. A. Austin received the premium offered for the best horse over six years old; a Black Hawk horse of Henry Turrill received the one for over four and under six years; a Black Hawk of Henry Farnsworth took the premium on colts; a gelding of Henry Turrill took the one on mares and geldings; and a span of chestnuts of Isaac Williamson took the premium on matched horses.

On the trial of speed, it had unfortunately come on to rain, so that the clay track was heavy and impeded somewhat the fleetness of the competitors. A horse of Fordyce Nash—Black Hawk—took the premium on fastest horses over six; a Black Hawk horse of Henry Turrill took the one under six and over four; and a Black Hawk of Ira Wright took the premium on colts. The matched horses came on to the number of five or six, and trotted to some extent, but owing to the rain, which had become heavy, the match was necessarily postponed without decision. The best time made was a mile in three minutes by the horse of Henry Turrill, of Shoreham. The horses were all green and were almost entirely without training for the track.

In the evening the exercises were rounded off by a very handsome ball at the Addison House, where the festivities were protracted to a late hour, and nothing occurred to mar the harmony of the occasion.

On the whole, the Sheep Shearing of Mr. Bingham may be regarded as eminently successful, and its results worthy of the man and the interest to which he has devoted the best years of his life.

To the Editor—Sir: Supposing my connection with the Vermont State Agricultural Society might give some authority to the report of his shearing, Mr. Bingham requested me to be present and take minutes of the weights and examine into their correctness. The gentleman who attended to the weighing is a merchant of this place of good standing. I personally examined in the weighing of one-third or more of the sheep and fleeces and cheerfully certify that I believe entire reliance can be placed on the foregoing statistics.

Very respectfully, your ob't servant,
J. A. Beckwith.

Middlebury, Vt., June 17, 1856.

The Skirret is a garden vegetable, well spoken of in the Revue Horticole, but little known here. It belongs to the family of Umbellifers, and is a perennial plant, with bunches of fusiform, fleshy roots, from six to ten inches in length, and from three-fourths to one inch in diameter, somewhat crooked, of a russet color externally, the flesh being white. It is one of the richest alimentary roots; its flavor is slight, slightly resembling celery; is good fried and for soups. Its produce is *enormous*, and efforts are making to introduce it instead of the potato.—Horticulturist.

Home Manufactures.

We clip the annexed from the Deseret News, that we may call the attention of our readers to the value of the two articles named therein—Castor-Oil Beans and the Sunflower, both of which grow in California profusely, and can be turned to most important account. Already valuable experiments have been made with the fibers of the sunflower stalk in paper making, and for this reason we call attention to it, together with the Oil Bean, that our Ranchers having plenty of land may try the experiment:

THE WAY TO GET RID OF THE SUNFLOWER.

Editor of the Deseret News: In the absence of other material for our Soap Factory, and until a larger amount of Castor-Oil Beans can be raised, I have examined the seed of the Sunflower, and find it sufficiently oleaginous for the purpose of soap making.

Now, as the brethren are somewhat slack in obeying the counsel, to extirpate those noxious weeds, with only the prospective advantage of improved crops to reward the labor of so doing, perhaps the offer of immediate payment may stimulate some to this good work, and accordingly I engage to give a reasonable prince, in soap, for all the Sunflower seed delivered in this city, at my house, or that of br. Staine's, both on South Temple street.

The seed ought to be gathered now, as it contains more oil at this time, than it will do when it is fully ripe. You can probably suggest the best mode of collecting and separating the seed—the subsequent operations for extracting the oil I am familiar with.

By drawing attention to this subject, you will not only aid the cause of "home manufacture," but confer a real benefit upon those who have diligently sought to rid the land of weeds, &c., but whose labors in this respect, may prove unavailing, in consequence of the negligence of others.

Yours most respectfully, Wm. France.

Cultivation of the Sunflower.—The Irish Farmer's Gazette states that the cultivation of the sunflower as a field plant is taking place in many parts of Ireland, for the purpose of producing cheap poultry food and the production of oil. It requires but little care and attention, and the stalks, when burned for alkali, are reputed to yield ten per cent of potash; the green leaves, when dried and reduced to powder and mixed with bran, according to some French writers, are excellent food for cows, and greedily consumed by them. In Portugal the seeds are made into meal and bread, and in America they are roasted and substituted for coffee. But their chief value, in a commercial point of view, is in the great quantity of very pure oil which may be expressed from them, little inferior to olive, and suited for table use, burning in lamps, and for the manufacture of soap. The seeds are also greedily devoured by birds, and yield a cheap food for poultry, with the further advantage, it is said, of rendering the hens prolific; and the cake produced after expressing the oil is excellent for cattle feeding. It has been found to yield fifty bushels of seeds per statute acre, producing about fifty gallons of oil and fifteen hundred pounds of oil-cake.

Yellow Locust

A correspondent, says the Rural New Yorker, asks for information relative to the cultivation of the yellow locust. I often wonder that more attention is not paid to the subject, especially in those sections of the country where wood is scarce, or growing so. It is the most important as well as the most profitable wood that can be grown, and if any farmer would devote his waste land which is dry, to its growth, or put out from one to ten acres of it, according to the size of his farm, he would make a better investment than in anything else he could do.

Seventeen years ago, I set a row of trees along the top of a sliding bank, or side hill, which could not be cultivated. The whole time employed did not exceed two hours. The roots spread, and soon filled the hill to the bottom with thrifty young trees. Probably I could cut off from seventy-five to one hundred dollars' worth of posts, and in ten years, more than double that quantity, and this too upon land that otherwise would have been entirely unproductive.

The cultivation is simple, and once in the ground the roots remain for all time. Gather the pods this fall or in the spring from the trees, and get the seeds. Prepare the ground for your nursery as you would for onions or other roots, and when the danger of frost is over take your seeds and put them into a vessel, and pour hot water over them. After standing twenty-four hours, pour off the water, and pick out all that have swollen—perhaps one-third may be thus ready—plant them in rows about three feet apart, and three or four inches in the row. Pour water over those that remain as before, and go through with the same process. Keep the ground free from weeds, and the young trees will be fit to set out the next spring. Prepare the ground as for any other crop, if possible. Mark it out into squares of a rod, and set a tree at each angle. About the third year, run a furrow between each row of trees about ten inches deep. Keep the cattle out, and you will have a locust grove which will last as long as seed grows and water runs. An acre of locust, at twenty years from the seed, would yield not far from four hundred dollars, and the same or more every fifteen years after. As soon as the young trees get out of the way of the cattle, it will furnish very good pasturage. Let every farmer who has any waste places, set out as many yellow locusts as he can, and set them in all the vacant places in his wood lot. By doing so, he will soon find that he has a fine lot of very valuable timber growing, that has cost comparatively nothing.

The Manzanito.—The Manzanito tree is now in bloom. The beautiful white balls of the flower hang in clusters like festoons of the lilac, pleasing with order, and mingled in harmony with the surrounding green. We do think the manzanito (little apple), when in bloom, the most beautiful of all the evergreen shrubbery of the forest. The tree seldom grows over fifteen feet in hight, or twelve inches in circumference. It has rich, smooth, auburn colored bark, the leaves are a deep green, very abundant and of the size of the apple; the fruit also resembles a little apple (sweet), and is very useful in curing many diseases, such as diarrhea, chronic or otherwise. Many of the lower limbs of different manzanitos are bent down until they touch the ground, where the limb has invariably taken root and formed a new tree, as in the case of the banyan. From this fact we judge the tree will bear transplanting, and certainly could be raised from the seed. The manzanito is the most common of all evergreen shrubs in the mountains, and is more beautiful and certainly preferable to most of the exotics now imported from foreign lands.—[San Andreas Independent.

Merced County and its Agricultural Advantages.—As an agricultural county, that of Merced is unsurpassed in advantages derived from the fertile lands along the banks of the river. These, though not extensive, are rapidly advancing in value by the introduction of permanent improvements upon the ranches, and the introduction of all the appliances to successful farming. The bottom lands were early occupied by settlers, who have gradually improved them from year to year, until their value has increased ten-fold, not more from the improvements which have been consummated, than from the scarcity of arable land in the immediate vicinity. These lands become more extensive as they verge towards the outlet of the river, affording, where the rising of produce is incompatible, excellent pasture for stock. During the past summer, large herds were driven from the lower country for the benefit of the pasturage found at almost all seasons of the year, extending over the tract of country lying near the junction of the Merced and San Joaquin rivers. Similar locations for farmers, and equally rich in agricultural facilities, though not so extensive, are found along the lower portions of the Tuolumne, most of which, however, were long since taken up and improved. We learn, that throughout the county of Merced, more extensive crops of grain have been sown than in former years, the favorable season having brought into improvement a large quantity of land hitherto lying waste. The failure of the crops in other portions of the State the past year, did not reach the farms along the Merced. There is but little mining carried on in the county, notwithstanding the many locations highly favorable to those who might engage in it. All who have settled upon the river have heretofore found it preferable to improve the land rather than depend upon the uncertain remuneration of mining labor. We learn from the Mariposa Gazette that many of the farmers upon the Merced have from three hundred and fifty to four hundred acres of land sown with wheat and barley. The county is considered the granary where Mariposa and Fresno must derive a great portion of the grain for the supply of their flouring mills, while Tuolumne, with her few scattering acres of arable land, will find it "up hill" work to compete with her southern neighbor.

We are most glad to note the steady onward progress of this noble county, by the foregoing, from the Stockton Argus.

Mining and Farming in the Tulare Country.—The Stockton Argus says: Important discoveries in quartz mines have been made near White river, which are said to exceed in richness any heretofore known, south of Mariposa. As yet they have been but little worked—the parties owning them, contemplating erecting extensive quartz machinery in the Spring. Much interest is taken in the quartz veins that are found so numerous in this section of the country, and by those who are best acquainted with quartz mining, they are pronounced equal in extent and value to any other portion of the State. There is but little show of mining life observable on the rivers of the Tulare country—the miners being "few and far between."

The greater portion of those who have settled on the lands in the vicinity of Visalia, are largely engaged in the raising of stock, and farming. The population is rapidly increasing, by the accession of a steady immigration from the plains, nearly all of which, influenced by a fertile soil, level lands, good timber and healthy climate, are induced to make their homes in Tulare Valley. No portion of our State affords a greater quantity of unbroken pasturage, or an equal extent of soil, so well adapted to large crops of grain, as the range of country lying within the limits of the Tulare Valley. A large number of persons are constantly engaged in purchasing stock from various portions of the country, and by supplying the southern mining country, they realize paying profits. In connection with the trade in stock, they purchase large quantities of hides—of late a very important item of export. At Millerton, everything of a business nature had long since taken its exit, and nothing remained, but the beautiful mountain scenery which surrounds it, to render the place anything more than a rest by the wayside. The roads, beyond the Merced, are in an excellent condition.

Snow Slide.—The Old Mountaineer gives the following notice of a snow slide at Rough and Ready quartz mill, whereby loss of life occurred:

"Four men, engaged in blasting and raising quartz from the ledge, which is situated near the summit of the mountain, had built a cabin a short distance from the ledge, and were there passing the winter. The slide occured on a Sunday night. On Monday it continued storming so heavily that the summit of the mountain could not be discerned from the creek, where the quartz mill is situated. It shattered and carried away the quartz house and other structures connected with the mill. It also swept across the line of the railroad running from the ledge to the mill, and has doubtless destroyed the greater portion of the track. On Tuesday the weather cleared away, and persons on the creek being enabled to see the track of the slide, and to perceive the absence of the cabin, a number of men went up, and, after digging and clearing away the snow, during the whole of Tuesday night, on Wednesday discovered the four unfortunates, dead in their cabin. The slide had swept off the roof of the cabin and packed snow of many feet depth in and around the area formed by the logs. Three have died in their bunks, apparently by suffocation and without any struggle. The fourth lay on the floor, and seemed to have exerted himself with the strength of desperation in his dying moments."

The United States Agricultural Society met at Washington City (D. C.), on the 14th of January last. There was a larger attendance than ever before, twenty-eight State and Territorial agricultural boards and State societies being represented. Among the audience were President Pierce, and many Senators and Representatives. The President of the Society, Mr. Wilder, read the annual address, containing many practical suggestions, and showing the Society to be in a flourishing condition. It lasted three days, during which time a great deal of interesting business was transacted. At the close a most eloquent address was delivered, when the meeting adjourned.

Origin of the Ayrshire Cattle.—Some of the cattle from Holstein, shown at the great Paris Agricultural Exhibition, were mistaken for Ayrshires, so close was the resemblance in form, color, and general characteristics. The early connection of Scotland with Denmark seems to lead to the belief that the progenitors of this famous milking breed were originally brought from Denmark, and that the Holsteiners and the Ayrshires are of the same stock.—[Ex.

Trade of China and Japan with California.

From the position of California at the present time, there can be no doubt that she is to be the great highway for the trade, or large portions of it, between China, Japan, and all countries contiguous, as well as the islands of the sea, and the great marts of New York, Boston, Philadelphia, &c. This being the fact, it is a matter of moment that we should be made acquainted with all that relates to those countries, and for this reason we give the following sketch of the Japanese Empire from the Cologne Gazette, and believe it will be found of interest to our readers:

THE JAPANESE EMPIRE.

Important Arrangements with the Netherlands---Has Japan been Opened to Foreign Commerce?---Vessels of War Ordered in Europe for the Japan Navy.

At long intervals we receive scanty intelligence from the singular but highly interesting imperial empire that lies before the eastern coast of Asia, "at the end of the world." We mentioned in No. 278 of this paper that the Siogun at Jeddo had called together the great dignitaries of his country in order to consult with them whether it was advisable to grant for the future to foreigners more extensive privileges than they had hitherto possessed. The meeting was held on the 22d of June of this year, and the question was so far decided that the harbors of Nangaski and Hakodadi were to be opened to all foreigners; they were permitted to run into these ports to repair their vessels and to establish coal depots, but not to remain longer than was indispensably necessary. Without special permission no foreigner can go into the interior. As regards the commercial question—which is the principal and most important point—nothing was decided. Consequently, *with the exception of the Dutch and Chinese, all other nations are now, as before, excluded from commercial intercourse with Japan.*

That this exclusiveness cannot be maintained much longer is no more to be doubted than the fact that the emperor had good cause to distrust foreigners.

Until the sixteenth century, the East Asiatic Island Empire was open to all sea-faring nations on the most liberal conditions; there they could trade more freely than in the West India islands or in the American colonies, from which every European maritime power excluded the others; the Japanese themselves went with their trading vessels as far as into the gulf of Bengal. The restrictions first began when the Europeans abused the right of hospitality extended to them, and filled the country with civil war. Since, now, almost 250 years, Japan has shut its gates, and only to the two above named nations has she kept open a narrow entering door on one of the southern islands.

Since then she has enjoyed uninterrupted quiet and risen in wealth and civilization in her own peculiar way. The Japanese are among all Asiatics of Mongolian race, by far the most gifted people, brave and bold, inventive, in a high degree intelligent and industrious, and by far not so full of conceit as the Chinese. As they have at all times read Dutch books, they have remained in a certain connection with the affairs and relations of the rest of the world, and it would be on our part very assuming, to apply to these highly cultured Asiatics the name of barbarians.

Since the Pacific Ocean has become the highway for European and American vessels, Japan has got a new position on the globe; it gets constantly in contact with foreigners, and is unable to keep them at distance. The Emperor has to come to accommodation with these unwelcome guests, whether willing or unwilling, and if he is not willing they resort to force. Since the commencement of this century they have left him no rest, and he has found himself compelled at least to enter into negotiations with them.

More than twelve years ago (in Feb. 1844), the King of the Netherlands addressed a letter to the Emperor, in which the danger was pointed at to which Japan would expose herself if she persisted in this rigid exclusiveness; at a time when steamers were plowing the ocean it could not be carried through. The King of Holland very properly observed: "The nation, which at this period of general approximation and intercourse, shall attempt to isolate itself, will get into enmity and trouble with many. When old laws, by being rigidly enforced, give rise to disturbances of the peace, then reason dictates their modification and amelioration. This, mighty Emperor, is then also our friendly advice: Moderate, temper, soften the rigor of the law against intercourse with foreigners, that happy Japan may not be laid waste by war. We give your Majesty this advice with the best intention, free from any selfish state interest. We hope that the wisdom of the government of Japan may lead to the conviction that peace can only be preserved by friendly relations, and these only be brought into existence by commercial intercourse."

This admonition of the King of Holland was well meant, and has, in the progress of time, been fully justified. Japan, through the pressure of circumstances, has seen herself obliged to conclude treaties with several maritime powers, but she evidently commits an error when she stops half way. She makes her concessions reluctantly. From her whole proceeding it is manifest that as yet she sees in every foreigner an enemy; and certainly the conduct of Europeans and Americans in Asia is not calculated to remove the old apprehensions. The wicked opium war stares her still in the face.

As for the rest, as it appears to us, the hopes which are entertained as to the advantages that would be gained by a free commerce with Japan, they are greatly exaggerated. The people are so peculiar in manners and mode of living, in their dresses and customs—they have attained such a high degree of technical excellence and dexterity—that they would not be great purchasers of European manufactures. The West would have to pay for Japan articles of export exclusively in gold or silver, and to the abstraction from Europe to India and China of silver, that to Japan would be added. These three countries have no changing fashions of dress; the people as regards their wants and their views are less changeful than the western nations, and in many branches of industry they are greatly our superiors. This causes or sets certain limits to the sale or disposal of our manufactured wares.

The Americans were decidedly in error when they declared that the treaty of Kanagawa, concluded March 18, 1854, *was in reality a commercial treaty?* Japan granted the two ports of Simoda and Hakodadi as harbors for the admittance of American vessels that they may there supply themselves with wood, water, coal, provisions and other necessaries "so far as the Japanese are in possession of them."

The Japan officials, for free intercourse with private persons is everywhere excluded, hand over to the captain of vessels a price current of the articles which they can furnish (or are willing to furnish) the payment has to be made in gold or silver. Article five declares that shipwrecked sailors and other citizens of the United States, who remain temporarily in Hakodadi or Simoda, shall by no means be subject to the restraints and confinement like the Dutch and Chinese in Nangaski, but they are to be allowed to walk about in Simoda wherever they please, within a circuit of seven Japanese miles. According to article seven, the vessels of the United States are allowed to exchange gold and silver coins and wares for other wares "under orders which the government of Japan will issue for that purpose."

It is evident from the tenor of this treaty that all is at the pleasure of the government of Japan. It also prohibits the export of the precious metals. And, according to the eighth article, the Americans obtain all they require, alone and exclusively through the officials appointed by the government, who have of course to follow the orders which they receive from Jeddo. *They let the Americans have of provisions what they require, &c., but take no foreign wares but only gold and silver in payment, which by no means answers the purpose of the Americans.* To a right of domicil or settlement the latter have no claim, and all attempts by commercial houses to establish in either of the two ports offices for trade have failed.

We can only give very limited faith to the reports of the Americans about ill treatment which they say they have suffered in Japan; their reports are always one sided and evidently not impartial. We have the express testimony of Mr. Levyssohn, who was director at Decima of the Dutch commerce. (Bladen over Japan, &c., by J. H. Levyssohn, 1852.) He declares these assertions not to be true, and cites instances in which the shipwrecked had been treated on the part of the Japanese authorities with great consideration. Vessels in distress had never been plundered, nor their crews murdered—they were, on the contrary, "most nobly treated and supplied gratuitously with all they stood in need of." Just about a year ago, these came to Simoda, one after another, twelve American whalers, *where they acted in that assuming manner that excited so much opposition to the Americans. They attempted to dictate to the Japanese authorities—got into collision with them—took forcibly what they wanted—paid in cash according to their own price current, and shot down several Japanese.* Then they went off. Under such circumcumstances it is no wonder, and no one can be surprised, that the Japanese authorities would grant no favors to American merchants. The government put a strict construction on the treaty of Kanagawa. When Doty, a merchant from San Francisco, came to Simoda in the ship Caroline Foote, in order to open a commercial home there, and to keep the necessary articles for vessels ready for whalers, he was sent off; and the same happened to him at Hakodadi. The authorities referred to the treaty. Commodore Perry had expressly admitted that no American had a right to enter any Japanese building unless he had previously obtained an express permission to that effect. These Japanese have, therefore, the right on their side whenever they grant such a permission or withhold it. Whether, in the latter case, they always act wisely or prudently, is another question. As for the rest, Japan has never given cause to another nation for well founded complaints. It is a sovereign country, and no one has a right to complain if it wants nothing to do with other countries. That the hitherto existing position of Japan towards the modern world's intercourse is a wrong one, and one that cannot be sustained much longer, we readily admit. But who can blame the Siogun, if, after the experience of years in India and China, and which he has now himself had with the Americans, he is shy, and only proceeds step by step? When in the year 1853, the Russian Admiral Putiatin delivered a letter from Chancellor Nesselrode to the State Council of the great empire. Rippon, he was answered: "The imperial government intended to open the ports of the empire; yet it would require some time to make the necessary preparations." They were aware that the foreign nations desired to communicate with the people of Japan, and the people of Japan also on their part desired to trade with them. They had therefore determined to enter into commercial relations with all nations, and already could such vessels as had suffered injury or stood in need of water and wood, enter any of the ports.

Soon after that, appeared the American expedition, with its ill concealed threats, and immediately the government of Japan became again distrustful. It will evidently proceed by steps, in order, as it says, to be sufficiently prepared to be able to meet the new relations. For, by throwing open the empire to the foreign commerce, a new state of things will spring into existence—and if European states are in the habit of tarrying and delaying a long time before they undertake thorough changes that effect the whole organism of the state, no censure can fall upon an Asiatic empire that for 250 years depended solely on itself, if it goes cautiously to work.

We have reason to think that Japan somewhat understands her new position. She concludes treaties with everybody, first with similar cautions as are contained in the treaty with America—only with the old and tried Dutch friend she comes out more frankly. After the Americans came the English. Admiral Sir James Stirling negotiated, in September, 1854, at Nangasaki, with the plenipotentiaries Mezi no Ekek fo Kami and Negai Evan Ocho, and concluded with them 14th October, the treaty that was confirmed or ratified 9th October, 1855, by his Imperial Majesty. *According to it "trading of any sort" between the English and Japanese is excluded.*

It is stipulated that the two seaports, Simoda and Hakodadi shall be open to British vessels for the purpose of repairing them and taking in water, provisions and other supplies, that are absolutely necessary. Other seaports are only open to shipwrecked vessels or to such as have been disabled by storm and bad weather. All English vessels must submit to the laws of Japan. As soon as the officers do not conform to them the harbors shall again be shut, but only so long as the breaking of the law shall be sanctioned by the English government. Other Englishmen who commit similar offences shall be punished by the officers. In both of these harbors the English enjoy the same privileges that are granted to the most favored nations; yet the ordinance does not apply to the privileges granted to the Dutch and the Chinese. Vessels that lie at anchor must conform to the directions of the Japanese authorities; they are not to shoot with firearms; they must not send off boats nor throw out the lead, nor make or take soundings; they must put no crew on shore, and in general carry on no trade with the inhabitants.

Working men and materials are furnished here at a tariff on which the parties have agreed. English vessels of war may enter the harbors, but only in case of urgent necessity, of which they have to inform and give evidence to the imperial authorities. The treaty stipulates that for the future all negotiations and discussions shall be carried on in the English language, after the Japanese shall have had time to understand it the-

roughly. Finally, a burial ground, surrounded by a stone wall, is granted to the British subjects on the Island Madsume.

It will be seen how carefully here, also, everything is fortified and guarded by clauses; whilst the government of Japan has of late granted to the Dutch important privileges. "According to a preliminary agreement" they are not in (for the) future confined or limited to the Island Decima, but may have free intercourse in the town of Nangasaki and its vicinity. The whole, although small Island of Decima, has been for the future wholly assigned to them. Now they can make use of the island as an entrepot, and there deposit their goods without examination or payment of duty on them. The keys to the gates and the depot magazines are left with and kept by the Dutch commercial supervisor. Duty is only paid on the wares after they are brought into Nangasaki. As to the rest, the commerce (for the present) with the Hollanders remains on the old footing—it is accordingly not free for private individuals. But from now on, free public religious worship and burial is granted to the Dutch. They are allowed free communication with other vessels that arrive in the harbor or leave it. Until a definite treaty, the conclusion of which is in prospect, this preliminary agreement will remain in force.

But the government of Japan understands how and when to make distinctions. Towards the Americans and English it is still further coy and shy, while it makes valuable concessions to its old acquaintances the Netherlanders. It begins with them, in order to get over the old exclusiveness, because it knows that it has no cause to apprehend any infringement or injury from Holland.

We would, in concluding, draw the attention of our readers to some circumstances that are little known, or not yet sufficiently regarded, which we consider as very significant of events, that the womb of time, sooner or later, may bring forth.

After, on the part of the Netherlanders, the negotiations in respect to the preliminary agreement had been settled, and all matters with the government of Japan had been brought to a satisfactory conclusion—*the latter requested Captain Peels Ryken and three other officers to remain in the country, and to give instruction to the Japanese in matters appertaining to naval affairs. And to Commandant Fabius, who returned to Europe, it gave orders amounting to two and a half millions of dollars, for getting up a Japanese fleet of war, which is to be entirely upon a European footing.* It allows to be built in private Dutch docks four steam screw corvettes, which it places under the command of a Dutch officer, educated in a Dutch naval school, who will deliver these vessels in 1857, in Japan. Since 1855 it has taken into its service a number of Dutch mariners of various grades, in order to qualify Japanese sailors for active service. Now it is well known that of all the Asiatic races the Japanese are by far the best sailors. Their islands are surrounded by dangerous cliffs, and on the globe there is not a sea that is more visited by storms than the sea of Japan. But the Japanese are not only intrepid and brave, but highly intelligent and perfectly capable of appropriating to themselves all the improvements in European nautical matters, and in our gunnery. They go to work differently from the conceited Chinese, since they adopt that wherein the strength and superiority of foreigners lies. With a well manned fleet of war steamers, they might remain masters in their own house. By these outfits and equipments they evidently understand or mean the "preparations" they have to make before they can throw open the gates of their country to foreign commerce. And we cannot but approve their course.

What New York and the Eastern States Say of Repudiation.

As this question most materially affects the reputation and interests of all the citizens of the State, and as the Farmers, Manufacturers and Mechanics form the largest class and the heaviest tax payers, we feel it a duty to lay before them the opinions expressed abroad relative to this subject. Of course in publishing the article below (which is from the N. Y. Herald of the 21st of January) we do not by any means agree to or indorse all its sentiments; but we publish it entire to show how injuriously such an article must affect our State, deterring as it must, many who would otherwise become citizens. To this is added similar censure by the leading presses at the East. We the more deeply regret these fatal measures to our State's name and credit, for the only hope of permanent prosperity lies in an increase of population, and this we cannot expect to any extent while her reputation stands so low abroad, unless we send facts there broadcast, to counteract these reports.

Gov. Johnson's letter to Drexel, Sather & Church, of San Francisco, relative to the payment of the interest of the bonds in January last, and his opposition to repudiation, were favorable, and we believe that the debt will be eventually paid.

But the Governor's good opinion of the Treasury and its condition to pay the July bonds, will be only the cause for another attack upon us, when this mail carries the news of our officials' delinquencies. The article we now copy seems to have prophecied more was in progress.

We have often published facts, to show that the press at the East publish articles that tend to hinder emigration from thence, and seem gladly to do so; and rarely if ever laud our State. This of course is their policy, but California must defend herself, and must take measures to make known her vast resources, so vast that by two or three years' wise legislation and good government, she can not only *pay* the repudiated debt, as she ought to do, but be *free from Eastern goods*, and free from debt, also.

Here follows the article from the N. Y. Herald:

REPUDIATION IN CALIFORNIA.

The judgment of the Supreme Court of the State of California, declaring the act for the construction of a wagonroad across the Sierra Nevada null and void, as being in contravention of the constitutional provision prohibiting the contraction of any debt over $300,000 without an appeal to the people, is we take it, only second to the establishment of the Vigilance Committee, in historical importance. The effect of the judgment is to leave creditors of the State for an amount exceeding $2,700,000 absolutely without recourse, and to inflict upon the State credit a blow which will be felt for years. It is of course competent to the people and Legislature of California to repair the mischief by passing a new remedial act, assuming the debt, and having the same ratified by the people; and this, if they have either prudence or honor, they will make haste to do. But, with all their haste, time must elapse before such an act can be passed and ratified; and meanwhile the claims of the creditors will be exposed to all the contingencies of their precarious position. The people of California, like the people of Mississippi, may come to think it convenient to pay off their debt without putting their hands in their pocket. New flaws may be discovered in the character of the debt, and ingenious lawyers may show that it may be repudiated without shame. Questions may arise as to the disposal of the money obtained from the creditors, and it may be shown that the State was not the only recipient or beneficiary thereof. We have seen such things before, and there is no reason why we should not see them again.

If the question could be settled in half an hour by the merchants of San Francisco, no doubt the creditors would not suffer even in imagination for a single day. But the high-minded men over whom General McDougal presided are a very small item in the population of the State. Their views are not certain to be those of the poor farmers, and miners, and fishermen and vagrants who will be called upon to vote the ratification of a remedial act.

In our opinion, a just Providence is punishing California for the faults of her people. In the days of their prosperity, when human labor and energy commanded higher rewards than they ever obtained before or since, the Californians forgot what they owed to themselves and to us. They disregarded the obligations of the citizen, and left their government in the hands of whatever vagabonds chose to usurp it. Like all other faults, this one is now working out its own punishment. The whole State has only been snatched from universal chaos and anarchy by a revolutionary movement, and a deliberate, though necessary violation of the law by the first men in the country. But this perilous experiment did not exhaust the measure of retribution. Now comes, —worse almost than Revolution—Repudiation; and California exhibits to the world not only a people whose virtue is shown in their contempt of law, but a people among whom it is justice and honor to defraud honest creditors of their due.

We say it is a judgment—a righteous judgment. California may make what amends she can, and pay principal and interest at some future day. But she cannot wipe the stain from her annals. She cannot obliberate from men's memories the damning fact that her people are so unfit to exercise the duty of self-government that they elect magistrates who violate the laws, and who use the high and honorable name of the State, by the authority of the people, for the purpose of swindling the public. These are things which are remembered. For a generation, at least, the Californians will lie under a stigma and reproach. Men will be shy of them, and cool to them. Not that they have shown themselves any more dishonest or less honorable than their neighbors, but because they have given evidence of so little sagacity, and so much recklessness that one never can be certain that their elected agents are not professional knaves. What has been done, may be repeated. Future creditors of California can never be certain that the parties with whom they contract—however high their office and large their esteem in their State—are not violating the law and defrauding their constituents and their creditors together.

Death of Father Mathew.

FATHER MATHEW, the renowned Apostle of Temperance, died at Cork, on the 9th of December. His career has been remarkable, and his influence among his countrymen in Great Britain and America will long be felt. Theobald Mathew was born in Thomastown, Ireland, Oct. 10, 1790. He was left an orphan at an early age, adopted by an aunt and educated in Kilkenny Academy and at Maynooth. He was ordained to the priesthood at Dublin, having previously entered upon his philanthropic labors among the poor. The curse of whisky, brought so fearfully to his notice among these wretched people, roused him to unwonted enthusiasm, and he determined upon a crusade against the demon of Alcohol. Adopting the principle of total abstinence, he commenced a series of meetings, and soon awakened the latent enthusiasm of the Irish nature to his assistance, meeting with a success beyond the wildest hopes. He traveled from town to town through all the Island. His spotless fame preceded him, and his progress was one triumphal march. The authorities unbent their dignity to do him honor, and the people followed and crowded around him with adoration. He administered the pledge to thousands at a time; at Nenagh to twenty thousand in one day; at Galway a hundred thousand in two days; between Galway and Loughrea to nearly two hundred thousand. From Ireland he went to England, where even the phlegmatic Saxons were infected with a corresponding enthusiasm. Thence he came to the United States, where to shake hands with the Apostle of Temperance and receive his medal with a pledge of total abstinence was the highest ambition of every worthy son and daughter of the Emerald Isle. His warm reception and gratifying success in this country are well remembered. Through all this Herculean labor he never amassed a cent for himself, but was constantly in a state of personal poverty. When he began his good work his brother was the proprietor of a large distillery. He supported Theobald until his wonderful success had ruined the distillery, and reduced the owner to bankruptcy. To meet the wants of the good Samaritan, the British Government settled an annuity of £300 upon him, which sum was just sufficient to pay the premium of an insurance policy held by his creditors as security for their claims. Since his return to Ireland, the weight of years and the exertions of long labor have compelled his partial withdrawal from public life, and his name has been less prominently before the public. In personal address Father Mathew was courteous, benevolent and winning in the highest degree. The news of his death will be received with profound regret by every true friend of man throughout the world.

[N. Y. Tribune.

TRUE HOSPITALITY.—I pray you, oh, excellent wife, cumber not yourself and me to get a curiously rich dinner for this man or woman who has alighted at our gates; nor a bedchamber made at too great a cost; these things, if they are curious in them, they can get for a few shillings in any village; but rather let the stranger see, if he will, in your looks, accents and behavior, your heart and earnestness, your thought and will, which he cannot buy at any price in any city, and which he may well travel twenty miles, and dine sparely and sleep hardly, to behold. Let not the emphasis of hospitality lie in bed and board; but let truth, and love, and honor, and courtesy, flow in all thy deeds.—[Emerson.

ENGLISH FEELING TOWARDS THE UNITED STATES.—The more festive scenes we have, like the following, the better it would be for the country:

At a dinner of the New England Society, in New York, on Forefathers' Day, Mr. Fillmore, one of the editors of the London Times, made a speech which is thus reported:

"He noticed the cordiality of his reception, and proceeded to remark that much had been heard of the original settlement of this group of States. The opinion had been indulged that the crew of the Mayflower were isolated among the people from whom they departed; but he was sure they left behind them a mass of sentiment corresponding with that which went with them. When we are told that they were driven hither by persecution, it is true; but when it is said that the sentiment of England concurred in the act of expulsion, do not believe it. The feeling they left behind was one of hope—was one of exultation when they succeeded. (Cheers.) The good feeling of England had always been on the side of the Pilgrims. If you are told, said, the speaker, that England wishes to see you divided, dissevered and broken, do not believe it. We do not believe that one star of your constellation will ever be torn from your flag. (Enthusiastic applause.) The two branches of the Anglo-Saxon race are destined to be the civilizers and conquerors of the world. You, by your railroads, urge your way to the West; we go to the Indies and the East, and together we shall encircle the world, till John and Jonathan meet under the walls of the Chinese Empire." (Vociferous cheering and nine cheers for Old England and New.)

SKATING.—We have not heard of any associations having been formed in our vicinity for this healthful and pleasurable exercise. The Albanians having got their ice bridge, go it strong on sleighs, and a few of the descendants of the old Dutch settlers, take a little walk—they are too heavy to run—on the Hudson River; but the Philadelphians appear to take the most delight in traveling on cold iron. In fact, they beat our boys and gals, all Wall street to a China orange. So says Porter's (N. Y.) Spirit, and hear what they say about skating in the Philadelphia Ledger:

"The river is frozen over to the depth of about four or five inches. Its surface, for miles, is as smooth as glass, not a break or rough spot to be found—the only interruption being the places where the ice-men are operating, busily filling their houses. This interferes but little with the skaters. They have a continuous surface for their sport from Fairmont to Columbia bridge, and, on Saturday, there were great numbers of persons on the river, enjoying the fun. The Skaters' Club, with their safety apparatus, were there, and planted staffs with flags of caution at all the spots deemed dangerous to skate upon. They have a complete set of apparatus, consisting of ladders, reels with ropes, inflated life-preserves, and go to a great deal of trouble to guard the incautious from danger. The ice seems to have been made quickly and solidly, and there is a present prospect of a good supply."

A SAILOR being asked how he liked his bride, is reported to have remarked—

"Why, d'ye see, I took her to be only half of me, as the parson says, but dash me if she isn't twice as much as I; I'm only a tar—but she's a tar-tar!"

A LADY asked her gardener why the weeds always outgrew and covered up the flowers. "Madam," answered he, "the soil is mother of the weeds, but only step-mother of the flowers."

PROSPECTUS
OF
VOLUME VII.
OF THE
CALIFORNIA FARMER.

THE CALIFORNIA FARMER was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer FARMER expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good —to them we and our cause are known—our desert at their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the CALIFORNIA FARMER.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the TRUE friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it in comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal.

The terms of the FARMER are, for the year (always in advance), $5.

HORTICULTURAL.

Commercial Nursery,

Three-Quarters of a Mile East of the City of San Jose.

THE Proprietors of this Nursery, having received the award of the

FIRST PREMIUM
OF THE
STATE SOCIETY

the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of

FRUIT AND ORNAMENTAL TREES,
For the Trade of 1856 and 1857,

that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.

Our Stock consists of

One Hundred Thousand Trees,

FROM FOUR TO ELEVEN FEET IN HIGHT.

Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are Cash and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.

v7-1 3m SMITH & WINCHELL.

The French Garden,

Near the Cottage, on the Santa Clara Road.

A. DELMAS,.....PROPRIETOR.

GRAPE VINES! GRAPE VINES!!

THE Proprietor of these extensive grounds would take pleasure in calling the attention of the public to the very great collection of Grape Vines, which he will offer the present season.

The Fruit from this Garden was exhibited at the late State Fair, and received the Diploma of the Society. The White Wine made from this Vineyard received the First Premium of the State Society. This Vineyard also obtained the First Premium for the Best Vineyard of Foreign Grapes, the present year.

The Proprietor will offer the present season his grand collection of Eighty One Varieties. Among this splendid assortment will be found—

Black Hamburg;
Chasselas of Fontainbleau;
Chasselas of Frontingnac;
Cannon Hall Muscat;
Muscat of Alexandria;
Charlesworth's Tokay;
Syrian; Black July;
Golden Chasselas;

Together with every variety of the Grape known and approved.

The undersigned is confident that this collection is the largest and most complete in the country, and to this the attention of the public is particularly invited.

The subscriber would also offer—

APPLE, PEAR, PLUM, PEACH, APRICOT, NECTARINE, and other Fruit Trees.

—Also,—

RASPBERRY, CURRANT AND GOOSEBERRY TREES,
In good assortment.

Catalogues of all the varieties grown in this Garden will be sent to all who desire them, by addressing letters to the proprietor.

All orders will be answered promptly, and Trees and Vines carefully packed for any place in the country.

A. DELMAS,
v6-13 4m French Gardens, San Jose.

San Jose Nursery.

THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of

FRUIT AND ORNAMENTAL TREES,
ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.

Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 69 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.

The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer

Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.

In each of the above the very best and most approved varieties.

The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—

Black and Honey Locust;
Chinese Allanthus, Catalpas.

—Also,—

20,000 Mulberry Trees,

All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!

In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.

The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.

Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.

BOOKS, &c.

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages. Two Dollars per annum. "Without question the BEST Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."

THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.

THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.

SPECIMEN NUMBERS

Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to

LUTHER TUCKER & SON, Albany, N. Y.

☞ Subscriptions for any of the above works received at the offices of the FARMER and forwarded v7-2 tf

FLORA'S DICTIONARY.

BY MRS. E. W. WIRT, OF VIRGINIA.

LUCAS BROTHERS, No. 170 Market street, Baltimore, Md., call the attention of the public to their new splendidly illustrated edition of Mrs. Wirt's Flora's Dictionary. It is a medium quarto, containing two hundred and thirty pages, embellished with a border, and interspersed with upwards of

Five Hundred Wood Engravings!

It is issued in the following styles of binding and illustrations:

Muslin, super extra, gilt edges and full gilt sides, with Eight Groups of Flowers colored from nature.

Morocco, extra, gilt edges and full gilt sides, with Fourteen Groups of Flowers colored from nature.

Turkey Morocco, super extra, gilt edges, with Fifty-Eight Groups colored from nature, illustrating all the flowers named in the book.

Turkey Morocco, ANTIQUE, gilt edges, with Fifty-Eight Groups colored from nature, illustrating all the flowers named in the book.

☞ The above truly superb work is for sale by

WARREN & CO., State Society's Rooms,
Fourth street, Sacramento;
And 130 Washington street, San Francisco.

The Mathematical Works of Professor Davies are too well known to require special notice. They are the text-books (in connection with those of Professors Church and Bartlett) of the United States Military Academy at West Point, and nearly all the colleges in the United States. The elementary Course of Mathematics, consisting of the revised editions of Arithmetics, Algebra, Geometries, &c., and recommended by the superintendents of public instruction of Michigan, Illinois, Missouri, Wisconsin, Minnesota and North Carolina, and are used in the best schools and academies throughout the United States. Clark's English Grammar, Willard's School Histories, Parker's School Philosophy, Fulton and Eastman's Book-keeping, and Monteith's and McNally's School Geographies are also the favorite books in each of the above named States, as well as in all parts of the country where they are used. v7-4 2m

Important New Works,

JUST PUBLISHED BY

D. APPLETON & CO.,

346 and 348 Broadway, New York.

I.

THE HILLS OF THE SHATEMUC. By the author of "The Wide, Wide World." 1 vol., 12mo., cloth, $1 25.

The popularity of this work bids fair to more than equal the former work by this talented author.

II.

COMMODORE PERRY'S JAPAN EXPEDITION—Executed at the command of the American Government. Written out from the Journals of the Commodore and his Officers. By Francis L. Hawks, D. D. 1 volume, 8vo., with upwards of 200 Engravings. Price in cloth $5 00; ½mo., $6 00; full calf, $7 00; full morocco, $8 00.

This book, containing as it does, the record of one of the most brilliant National Expeditions ever undertaken, and illustrated by such varied illustrations, will become a standard volume for libraries. It is as interesting as a novel.

III.

A MEMORIAL VOLUME TO BISHOP WAINWRIGHT. Containing Thirty-six Sermons and a Memoir, by the Bishop of New Jersey. 1 volume, 8vo., with Portrait. Price $2 50.

IV.

MEMORIALS OF HIS TIME. By Lord Cockburne. 1 vol., 12mo. $1 25.

This volume presents to the reader a most graphic description of Society as it existed in Edinburgh towards the close of the last century.

V.

ELEMENTS OF MORAL PHILOSOPHY; Analytical, Synthetical and Practical. By Hubbard Winslow, author of Intellectual Philosophy. 1 vol., 12mo. $1 25.

VI.

PROGRESSIVE SPANISH READER; with an Analytical Study of the Spanish Language. By Augustin Jose Morales, A. M. and H. M. 1 vol., 12mo. $1 00.

VII.

MANDEVILLE'S NEW SERIES. THE FIFTH READER for Common Schools and Academies. By Rev. Henry Mandeville, D. D. 1 vol., 12mo. $1 00.

VIII.

CORNELL'S HIGH SCHOOL GEOGRAPHY; Forming Part Third of a Systematic Series of School Geographies, comprising a Description of the World; arranged with Special Reference to the Wants and Capacities of Pupils in the Senior Classes of Public and Private Schools. Embellished by numerous Engravings, and accompanied by a large and complete Atlas, drawn and engraved expressly for this work. By S. S. Cornell. $1 50.

D. A. & CO.

Have nearly ready, and will publish in a few days,

MARRYING TOO LATE. By George Wood. Author of Peter Schelmihl in America. 1 vol., 12mo.

MILLIA DULCIA; A Thousand Pleasant Things. Selected from Notes and Queries. 1 vol., 12mo.

THE CYCLOPEDIA OF SERMONS. By Jabez Burns. 1 vol., 8vo.

THE STORIES OF AN OLD MAID; with Illustrations. 12mo. v6-18 3m

NO. 1 CHINA RICE—500 mats, 50 lbs pounds each. Now landing and for sale by

v6-24 BRADSHAW & CO.

The California Farmer.

SAN FRANCISCO, FRIDAY, FEBRUARY 20, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited free.

BILLS SENT OUT.—We are now sending out bills to those subscribers who reside at a distance, and on whom we cannot make a personal call. We hope we shall have a cheerful and prompt response, for although the sums in each case may be small, yet the aggregate is large, and that aid will give wings to our thought and strength for more labor.

Such dues can be sent to our principal office at San Francisco, either by Express or Mail.

Buy your Trees of Regular Nurserymen.

A good price for a good article we have always found to be the best and wisest purchase, and we have always advocated the doctrine of buying only the best articles, in every department of Agriculture, especially—the best implements of all kinds, the best seeds of all kinds, and the best trees, plants and shrubs of all kinds—we know we can prove that, in this matter, they are always the cheapest.

Every experienced farmer and gardener will say that a *cheap* implement is soon out of order, is cared for less, and is soonest worn out and laid aside. Cheap, common seeds are less reliable; more are planted upon the same space, on account of the doubt of their value; less care given to their culture, and the result will be—*half a crop.* And it is worse with trees, plants and shrubs. Because they are cheap, they are little regarded; they lay exposed longer; less regard is paid to planting them properly; little or no care given afterwards, for the very reason that they cost but little—and the result must be: neglected, they soon perish, and the effort to obtain an orchard, garden, or a beautiful home, is lost, from the foolish idea of purchasing such a mass of worthless trash, as is so often crowded upon our market, at auction, to the great injury of the regular nurseryman, gardener, or florist, and to the purchaser also.

We are led to these remarks from the fact that we see such immense quantities of what we term trash, thrown upon the market, to be sold for what it will bring, we wonder that men of any experience will become purchasers at even any price. A little reflection, and a little figuring, would show them that such purchases cost them, upon an average, double the price of a wise purchase of a regular nurseryman, at full prices.

Recently a very large lot of fruit trees was sent to San Francisco (a part went to Sacramento), for sale; it was during the coldest weather of the season and they were badly frozen, besides being otherwise much exposed; they were several weeks exposed to the frost, and to the light and air, thus drying the best fibrous roots. These frozen trees have been all sold (or nearly so) and scattered over the country, and must result in loss and disappointment to the purchasers, and thus must result unfavorably to many, for it not only involves a loss of the amount paid, but all the cost attending the transportation and planting of them; and when they fail, as most of them must, then the loss causes the purchaser to be discouraged in such efforts, and thus the whole State is injured—for these are enterprises that are not for a day. Orchards and vineyards are the permanent capital of the State.

We noticed also large shipments of Grape Cuttings from Los Angeles, preparing to be sold at auction, to the highest bidder. We ascertained that many thousands are thus sent, and we know of parties that were unwilling to take them and pay freight; now, these will be sold, *if they can*—somebody will buy them, because they are cheap—and as Mrs. Toodles says, "it is so handy to have them in the house." And we suppose, poor as they are and cheap as they may sell, they will find purchasers that would not go and give a good Nurseryman a dollar for a good vine, and yet spend ten or twenty dollars for a lot of cuttings that are worthless, and then spend twenty and forty dollars to *half set them out*—and after waiting two or three years dig them up (*i. e.* if any lived), and say it was a miserable country and nothing will grow in it; whereas, *half* that amount expended with a Nurseryman of good standing would result in a crop the second year.

By these remarks we do not decry *all* auction sales; but we *do* believe that an experienced Nurseryman—one that has been educated at the business (and we hold none others should undertake it), will always find a ready sale for all he can raise. It is, for the most part, mixed lots, refuse stock, or worthless stock that is thus thrown upon the market—except in cases of "Executors' sales," closing up business, or those regular sales of Imported stocks, or Floral gems, which are the result of a legitimate trade.

We most heartily wish to see all regular nurserymen, seedsmen and florists succeed and prosper in a business, the tendency of which is to make the country more beautiful and prosperous, and to give employment to the greatest possible number; but, at the same time, we have but little sympathy for those who rush into a business of any kind without experience, and find, after a time, that they can only escape ruin by destroying the legitimate trader. The experience of past years shows that whatever promises well everybody rushes into, whether they have experience or not, and it is this spirit that has materially injured and overdone the agricultural interest in all its departments.

In the first days of the plow, barley brought a high figure, and everybody raised barley. Next, potatoes, and everybody changed to potatoes. Next came the "onion fever," and it was all onions. Wheat came next in turn, and the wheat fever raged. Now, orchards and nurseries. Each in their turn drew men from every profession and business, and, necessarily, many, from want of knowledge and experience, were wrecked.

We hope ere long to note a change that shall betoken a regular and steady attention to each branch of the great agricultural interest, that all excesses will be done away, and all unite and give to the regular nurseryman and business man a liberal and generous support, for it will most assuredly be found that mostly all other purchases result in losses.

Free Distribution of Seeds &c.—Want of Courtesy.

The position we hold as a public journalist and connected with the science of agriculture, that we profess to love and foster, requires that we should always watch and guard it from that which would have a tendency to injure or retard it, so far as our humble abilities will allow. For this reason we feel called upon to speak upon a subject which has been a theme of remark and the cause of complaint both here in California and at the East.

It has been the custom of the government of the Patent Office at Washington to forward to the State Society of California liberal parcels of seed and many volumes of Patent Office Reports for free distribution. These have been distributed by the Society in a liberal manner, with a request that some report of the success of the seeds might be made to the society, so that a due return could be made again to the Patent Office as the society desired; but we regret most sincerely that very little attention has ever been given to this request, or any regard paid, however much good would have resulted from such reports. We would try to believe that it was from want of reflection that this neglect arose; but when we remember that we have the records of three years, during which time more than five hundred volumes have been distributed, and more than three thousand parcels of seeds, all gratuitously, and yet up to the present time not a dozen returns have been made to the society, we cannot but feel that it was a neglect, in fact a want of courtesy that should not occur in such cases.

We would refer to another circumstance of a similar character. It will be recollected by the readers of the FARMER, that last spring we advertised the generous offer of Messrs. Green, Heath & Allen, tobacco merchants, of San Francisco, who made the offer of packets of the very finest quality of Virginia tobacco seed, to be sent free of charge to any parties desiring to plant it, only asking in return a report of its success. The same gentlemen sent a quantity to the State Society for distribution. The amount thus distributed was, we believe, nearly one thousand packages; and for all this liberality, we regret to say, scarcely a return was made. Surely this is not right. It is poor encouragement for any one thus to labor. It was due to them for their liberality that returns should be made. We sincerely hope these remarks will be justly understood, for it is not our intention to rebuke, but to remind those who have been the recipients in this manner of new and valuable seeds, that such neglect hinders the progress of the cause generally. We hope a better attention will be given to this subject in future. We endeavored to note every return which was made last year of such seeds, through our columns, and shall always be happy to do so for the general good.

Great Value of the Late Rains to Farmers.

ALTHOUGH it is impossible to estimate the value of the late rains in dollars and cents; yet there is a gain in dollars and cents to the farming interest that will be felt in a pecuniary way to the great good of the country generally. We may see showy paragraphs in the newspapers of *great freshets, destruction of bridges*, &c.—for losses must always follow such events—but there is no loss without some gain; and we now call attention to the following facts. This is a paragraph worth making:

The present rains have extended far and wide, covering many counties where the heaviest crops of grain are planted, and it is not too much to say that it will *increase the present year's crop on an average of* FIVE BUSHELS TO THE ACRE, and this will increase the crops of the State more than *one million bushels of grain.*

The value of the rains to the vineyards, orchards and gardens will be an equal amount—and we could make a paragraph like this and put it in capital letters:

IMMENSE BENEFIT BY THE FRESHET!
FIVE MILLION DOLLARS GAIN!

For the increased crops of the present year will vastly exceed even this large sum, and while we deeply regret the loss caused to the hardy miner, the industrious mechanic, the merchant and trader, we do hope the great general blessing which heaven has sent will not be forgotten.

We might add as a still more cheering fact that this change of season from former years of drought to one of a genial, humid atmosphere, which gives luxuriance to the earth, brings with it also a greater degree of *general health*, as well prosperity, so that amid smaller losses and calamities, we may see and appreciate the greater and more important benefits conferred.

THE PACIFIC EXPRESS.—We have been under many obligations of late to the Pacific Express Company for up-river exchanges, and especially to their House in New York, for forwarding with dispatch valuable parcels. We have never had parcels come with more promptness than those of the last two steamers.

TO ADVERTISERS!—Those who wish to make their business known quickly, please examine our columns and see the class of advertisers. We have all No. 1 Houses. Our journal will place you prominently before the public.

A Voice from the Vineyard of Ohio.

WITH great pleasure we lay before our readers the annexed letter from N. Longworth, Esq., the pioneer wine manufacturer of the United States; it is one of great interest to those who are engaged in the cultivation of the Vine in California, and demands of them a careful notice and an examination of the opinions advanced by Mr. Longworth. The first paragraph of the letter alludes to the statement we made in November last (date alluded to); the quotations he makes were only parts of sentences. We spoke of the *general success* attending the cultivation of the strawberry, and in speaking of that success we did not mean to say that three and a half inches in size was the maximum size, by any means, for we say *some larger.* We know very well if we had said we have them 6, 7 and 7½ inches, it would appear so incredulous that they would ridicule it, and yet fruit of even this enormous size has been raised in California; and we look forward to the time when a common sized hen's egg will be the standard size.

The history of the strawberry, or the notice of the two varieties named by Mr. Longworth, we gave in a late number, the McAvoy's Superior and the Longworth Prolific; and we repeat here, they are indeed valuable accessions to this fruit and do honor to the veteran pomologist, and we believe we shall show him, or report to him, some specimens of these varieties this season, that will even astonish him.

Mr. Longworth's opinion relative to our climate for the cultivation of the Grape, is of great value; his experience is a good guide book. The red Framona we imported in '53, but unfortunately lost it; the Grapes from Mr. Keller, of Los Angeles, shown in Ohio, will speak for California now, and we have the *proof* that we can beat the world in this department.

Mr. L.'s opinion as to the origin of our Grape, coincides with our own expressed in '52 and '53, that it was originally introduced into California by the early Padres, and the different kinds of the Grape we see now, the variation in the California Grape, results from its having been reproduced from seed, and probably unknowingly; it would be a matter of great interest could we trace the history of the Grape back to the first introduction of it. We shall be thankful for every fact given us.

We return thanks to our venerable and honored friend Longworth, and hope his life will be long spared to our country. We hope he will live to pay a visit to the California vineyards upon the Pacific Railroad, and be one of the honored guests on that great occasion:

CINCINNATI (Ohio), January 3, 1857.

EDITORS FARMER: I was surprised by an editorial in your FARMER of the 28th November. I have supposed you were ahead of, not only our backwoods, but all the world in the size of your fruits. You say "the success of strawberry culture in California is perfectly astoning, and must puzzle *old* pomologists." It even puzzles me, though I do not claim the title of "*old*," being only seventy-four years of age. I raised seed by impregnating a fine pistillate plant by a large fruited, but not abundant bearing hermaphrodite. Among the seedlings are two, superior to the rest. One, the Longworth Prolific, a hermaphrodite, and is the only one I have ever seen that bears a full crop of large, perfect fruit. It belongs to a rare class. There are occasional blossoms that are pure pistillates. The other, is McAvoy's Superior, a pistillate. Fruit of both is of fine quality, and large size. We have berries, instead of the size you name, of the largest—"three and a half inches, and some larger, and without a parallel case in the world"—we say, five and a half inches, and some larger, of the above seedlings. Your climate is suited to cultivate the best table grapes of Europe.

I have wasted large sums of money, and tried more than one hundred kinds of foreign grapes, and only found one suited to our climate. It is a small grape, and small bunches, but a fine table grape, and is one of the best wine grapes of Germany: The red Framena. As an evidence of what your grapes are, I this fall received a box from Mr. Matthew Keller, of Los Angeles, containing four clusters, that weighed about seven pounds each.

We cultivate in the open ground, native grapes only, and never had a bunch to weigh over twenty-four ounces. Those sent me by Mr. Keller, I deem not a native with you, but from Europe. Yours, respectfully,

N. LONGWORTH.

New Article of Fuel.

A writer from Sandwich, Illinois, in the Boston Cultivator, furnishes the following:

Among the novel transactions of this fast age, is the use of "corn in the ear" for fuel. Some of the prairie farmers of this vicinity are actually burning corn, as a matter of economy, for warming their houses. It may strike some of the eastern farmers with horror—the idea of using one of the great bread-staples in place of wood or coal, but such is the fact. Corn-cobs have long been used for fuel, and for summer use they make excellent and quick fires, but corn makes a more lasting and hotter fire, throwing off a greater degree of heat on account of the oleaginous element which it contains.

Corn, then, has inaugurated for itself in the "Sucker State" a new use; the hearth-stone is cheered and enlivened by its heat-imparting qualities. Merriment, not that kind produced by the "worm in the still," but social merriment, is now a new offering of its already manifold uses; the family is not only fed from its farinaceous properties, but is also *warmed.* We recline upon its husks, which form a bed that the Emperor Nicholas might court, and we extract from it a fluid for our lamps, while its use for fuel, as figures will show, is cheaper than wood or coal. Wood and coal at the door cost $6 50 per cord, or $6 50 per ton. Corn, seventy-five pounds, is worth in market twenty-five cents, at home twenty. A bushel will burn nearly or quite as long as a bushel of coal, or wood of corresponding value. Thus you see that in point of expense and agreeableness, the figures incline to the side of corn at present prices.

What think you, farmers of New England, could you sit by the enlivening heat imparted by a substance which enters largely into the formation of bone and sinew, the muscles of our bodies, and the growth and profit of our animals?

Such is the case with which corn can be grown here upon the prairies, that when the price falls below twenty-five cents, it is cheaper than anything else for fuel. Farmers here raise from one to many thousand bushels, cultivated mostly by horse-labor, save in picking; so that corn possesses a value smaller to us than to you of New England, where it enters largely into the great bulk of breadstuffs.

American Horses in England—Bad News.

IT is with deep regret that we are obliged to communicate bad news respecting Mr. Ten Broeck's American stable in England. On Tuesday last, Patrick Haley, the jockey, and George Harris, "the rubber" of Lecomte, arrived here in the ship Gazelle from Liverpool, and they inform us that Lecomte has given way in his forelegs, to such a degree, that he will not be able to start during the coming season on the English Turf—indeed, that it is extremely doubtful if he will ever be fit to make a race again. This news is bad enough, but, as if to give new credit to the old maxim that "misfortunes never come single," Prioress is represented as suffering from string-halt, and the only one left in true condition was Pryor, who also, by-the-by, had been complaining slightly in the feet. These misfortunes are attributed by the jockey to the fact that the horses had been put in train too early after their long sea-voyage and arrival in a new meridian, and, it is the opinion, that they should not have been put to work till near the Spring. Indeed, we are informed that such were Mr. Ten Broeck's directions when he left for Italy; and we are further informed that, at the time of the departure of the jockeys from Liverpool, Mr. Ten Broeck had not yet been apprised of the disastrous news. With Pryor, therefore, seems to remain the entire weight of supporting his country's racing fame; and it must be admitted that we have no longer any right to be sanguine in his favor, against the thousand racers of a great racing country, after the mishaps that have happened to the comrades of his enterprise. We are glad to be able to state, however, that, at the last accounts, Pryor's feet were "right," his general condition excellent, and high hopes are entertained that he will be in a fit state to distinguish himself when the bugle brings him to the score.

The injury which has happened to Prioress, is not of an irremediable nature. The string-halt is not deemed by us a positive unsoundness. Fashion had it once in both legs, and to use the expression of an old turfman at our elbow, "she raised them alternately high enough to step over a small yellow dog, but she recovered and ran well at that."

The jockies represent the state of feeling in relation to the "Yankee stable" very much the same as we have reported it from time to time out of the London papers. The English cannot comprehend how they are to be beaten on the Turf—one of the great theatres of British pride—any more than on a certain memorable occasion they could be persuaded that an American yacht could beat them on the ocean, and consequently they made up their minds that our horses were "a poor lot," just as they did that our crank little clipper, with her nonsensically taut and board-like sails, was utterly contemptible as a competitor against those who had held the waves under their especial jurisdiction for two hundred years. It is still barely possible, badly as things look at present, that our English friends may be destined to another surprise of equal magnitude in the ensuing spring. Of the four horses in the American stable, we are told that Prioress is the best liked, and that Mr. Gully, one of the professional big book-makers of the English Turf, stood willing to invest three or four thousand pounds in favor of the mare for the Goodwood cup. The fact, however, that Lecomte, the achiever of a four mile heat in 7:26 was not esteemed at all, somewhat affects our regard for the English opinions that have thus far been elicited on "the American lot." We have thus given all the items that we can gather on this interesting subject, and all we have to add in the way of comment is, that we hope the present aspect of affairs may be modified by the next news, and that we shall then be able to report, that Pryor and Prioress are likely to be in a condition to take up that portion of the burden, which the gallant Lecomte has been so unfortunately obliged to lay down. Haley and Harris (who, by-the-bye, desire to connect themselves with some racing stable here), may be heard of at Mr. J. D. McMann's, 166 Mott street, New York city.—[Porter's Spirit of the Times.

A GOOD SUIT OF CLOTHES.—A suit of good fitting wearing apparel is not often found; few manufacturers only know the true science of fitting a garment—some makers have a peculiar eye to making a garment to *fit* the body, others hang the clothes on as a washerwoman hangs out clothes to dry. We remember well after the great fire at Sacramento of '52, that we came to San Francisco, needing a Coat; we chanced to meet with G. W. Walter on Montgomery street, and we were *fitted.* The peculiar way he had of running his hand over the body assured us he knew what it was to *fit a garment*, and Walter & Tompkins know how to do it *now.* They have the garments ready made, or material to make them, at their fine spacious rooms on Montgomery, near Washington street, where we suggest to all who need a *fit* to call and try.

EMBEZZLEMENTS, ROBBERIES, FRAUDS AND MURDERS EAST.—While so much has been said and written in the eastern papers about the immorality, corruption and crime of California, and portions of it with justice too, we ask that they should remember there is some need of correction at home; for by last accounts there were murders committed in the public streets of New York, bank frauds, embezzlements, robbers, forgeries, arsons, and all kinds of crime that will equally vie with California. And while they thus expose the dark side of California, we ask them to look into our valleys, our vineyards, our fruit orchards and on our manufactures and mechanical labors, and give us the due meed of prise for these.

[For the California Farmer.]

POPULAR EDUCATION.

LETTER NO. III.

EDITORS FARMER: A system of public education should not aim to make scholars, but citizens; not book-worms, but practical men of the world. A large majority of mankind will ever be content with a very moderate amount of scholastic knowledge; just enough to enable them to conduct their business. Scholars, of course, we must have, and there is a point in their studies at which division of labor becomes necessary, as it would be impossible for a man to become profound in a half a dozen different departments of knowledge. Thus Chemistry, Astronomy, Architecture, &c., each present a field wide enough to demand a whole life's investigation; but when we enter upon such an investigation, that department becomes our trade or profession; and I must believe, that until we arrive at that starting point, we may all receive the greater benefit from a common education. The carpenter, the blacksmith, the lawyer, and the physician, each has his peculiar study for life, but there is a certain general education which all should receive before commencing that study. This education, it is the province of the public school system to afford: not to learn farmers or printers, surveyors or masons their trades, but to make minds capable of governing and directing themselves in any of the manifold avocations of life. With this view, education becomes twofold, discipline and acquisition; the former being preparatory to the latter, as the rules of logic are preparatory to a sound argument. Discipline prepares the mental store-house for the reception of knowledge, teaches how to arrange the stores, and, finally, their disposal. Without discipline, knowledge is of little value, as all our stores of it are sure to be misdirected, thus turning our greatest blessings into the greatest curses. I need not stop to point you examples; the history of the world is full of them—every year, every month, every day, presents cases of misdirected talent.

It is not, then, necessary, that the teacher should know for what trade or profession his pupils are intended; neither would it be proper for him, did he know it, to push them into studies treating only of those subjects—for two reasons: Firstly, the disorder which must necessarily ensue from the introduction of such a number and variety of studies. This alone, is an insurmountable objection to the idea presented by the two gentlemen whom I noticed in my last letter. Secondly, as I have said before, discipline should be the aim of scholastic education; and by the term discipline, I would be understood as meaning the regular, even, and successive development of those faculties which together constitute the mind. At the age of maturity, development, to a great extent, ceases, and then acquisition truly commences. The mind, though a unit, appears to be made up of many units, which evidently, do not depend as much upon each other for their individual strength, as the whole mind does upon their combined powers. Although there is a bond of sympathy which closely connects them into a whole, they still possess individuality, and the education of one of these units or faculties does not educate them all. Yet the mind, as a unit, depends as much for its strength and beauty upon their general and even development, as does a pyramid upon the whole number and proper adjustment of its blocks. The strength of a community does not depend on the intelligence of one or two of its members, but upon the gross combination of all its individuals; and the mind may be aptly compared to a community. It would be quite as proper for a teacher to direct his pupil to make use only of the right arm, because it is found to be stronger, as to push him ahead in some exclusive branch of learning, only because that element of his mind is already over-developed. Such training must ever result in the production of one-sided men, without balance or self government, zealous enthusiasts, men of but one idea.

On the contrary, I would say, that although a large majority of the youth cannot remain in school, to be cared for, till near the age of maturity, yet, as far as their education does extend, every faculty should be trained as evenly as possible; and, that when a teacher finds a mind peculiarly susceptible in some one study, he should restrain that study, and encourage his pupil in some other branch.

The teacher should have no more to do in making geniuses than sectarians; they are, commonly, but mental monstrosities at best—*ignes fatui*, which after a short, crooked, flickering journey, settle in some quagmire.

Where the State law does not provide a course of study, the board of education, or the trustees of the district, should always do so; for in addition to the disciplining advantages of a regular series of study, adapted to the successive developments of the mind, there is, without a question, an order in which studies should be taken up to facilitate their acquisition. This order, consequently, is not arbitrary, and a close attention to it will give connection to the pupil's acquisitions, render him methodical and logical, and where properly carried out, will prepare him with a sound physical frame, a well-developed and well-balanced mind, to enter on the great stage, where he is to obtain the second part of his education.

Respectfully yours, OMEGA.

PACIFIC MUSEUM.—This interesting place of amusement continues to draw crowded houses every night. It is an excellent place to take children. It will give them valuable lessons in natural history.

Have you visited the new clothing store of Mansfield & Wood, on Montgomery street?

SHIPMENT OF TREASURE, by the steamer J. L. Stephens, to-day, $1,389,796.

[Through the California Farmer.]

FOR B.

Oh! where is the land, over all the Earth,
That has half the charms of the land of our birth?
Need we wonder then that our favorite B.
Is bounding away on the briny sea.

That home by the limpid rivulet's shore,
Where his tiny feet, in the days of yore,
Were wont to ramble so fast and free,
What home is like it for such as B!

When his head and his heart were hopeful and young,
And mirth and melody lived on his tongue,
What thoughts came there to that ardent heart,
Of how so well he would he would play his part,
That the world entranced would stop to see
The bright career of the matchless B!

But the world is fickle, the world is vain,
And the world is bound by the worldlings' chain,
And what cares it, if the student pale
Can tell in immortal verse the tale,
Of how, ere Sin was seen on earth,
Or Sorrow and Death as yet had birth,
Through the bowers of Eden the live-long day,
Two youthful lovers were wont to stray—
And how, with malignant purpose intent,
And on hellish, envious errand bent,
The Demon of wrath, the Demon of woe,
Who in deeds of darkness is never slow,
Before they had time to taste the bliss
Of the half of their earthly happiness,
Prevailed on the unsuspecting mind
Of the first and fairest of womankind,
To trust in him, and forget her faith—
And how "the wages of sin is death!"
(Perhaps *ten pounds* did well repay
The deathless author of such a lay?)

And what cared the world how Otway died!
Or for Chatterton's pitiful suicide—
The boy-bard, who wrote and sung
With such super-human hand and tongue!
Who scorned to live in a world so cold,
And peddle in portions his soul for gold!

Alas! Dear B., it is pitiful
To think that the world is so very dull,
That it seldom knows, until too late,
Who are the good, or who the great,
Or who are learned, or who are wise,
Or whom to admire, or whom to despise!
But "*nil desperandum*"; let us try
To merit its favor! *Please reply.*

AGRICOLA.

(From our Boston Correspondent.)

Recent Publications.

Lily Bell, or the Lost Child; by Alice Fay: Published by James French & Co., Boston:

Quite an attractive volume, and of good moral tendency. The plot is simple, somewhat in style to the general novels of the day, and tends rather towards religious topics. The heroine of the tale passes quite an adventurous life, having been stolen in childhood, but is finally restored to her home. The denouement will be found quite interesting. The work has been highly commended, and is well printed.

The Household Angel in Disguise; by Mrs. Madeline Leslie, author of "Courtesies of Wedded Life." Boston, Shepard, Clark & Co.

The work before us is written in a most agreeable style, and the characters well drawn and exceedingly natural, showing careful study by the author, who is well known in literary life. The volume contains about 500 pages, and will be found exceedingly interesting. Many writers of fiction go too far, and sometimes destroy the real effects of the plot, but this is within bounds and represents home scenes natural enough, possessing at the same time a most excellent moral. We may refer to this work again, it being received late.

The above young but enterprising house, whose publications are already extensively known, are about making some important changes in their firm, which will give them unequaled advantages for the future.

Neighbor Jackwood, by Paul Crayton; Boston: Philipps, Sampson & Co.:

The above volume by the author of "Martin Merrivale," "Father Brighthopes," etc., is just received, and promises much pleasure in reading. The author has won a great reputation as a writer of fiction, and the work before us is said to be one of his best efforts.

Essays, Biographical and Critical; or Studies of Character. By Henry T. Tuckerman: Boston; Philipps, Sampson & Co.:

The above work has just been received, and too late for notice.

ANNOUNCEMENT of forthcoming works, by D. Appleton & Co.:

Smiles and Frowns; 1 vol. 12mo: by Mrs. Sara A. Willis.

Cyclopedia of Wit and Humor; by W. E. Burton.

Abridgment of Congressional Debates, by Thos. H. Benton; vol. 1, large 8vo. To be published to subscribers in 15 volumes.

A new work on the United States, 1 vol.: by Count Gurowski.

Valuable Works

BLACKIE & SON,

No. 117 Fulton street, New York.

A HISTORY OF THE EARTH AND ANIMATED NATURE. By Oliver Goldsmith. With numerous notes from the works of the most distinguished naturalists. Illustrated by nearly 2,400 figures, of which 230 are beautifully colored. Two vols. large 8vo.

RHIND'S HISTORY OF THE VEGETABLE KINGDOM. Embracing the Physiology, Classification, and the Culture of Plants; with their various uses to Man and the Lower Animals, and their application in the Arts, Manufactures and Domestic economy. Illustrated by 700 figures engraved on Wood and Steel, of which 100 are elaborately colored. One vol large 8vo.

THE FARMER'S GUIDE. A Treatise on the Diseases of Horses and Black Cattle, with Instructions for the Management of Breeding Mares and Cows. By James Webb, Veterinary Surgeon.

HOW TO CHOOSE A GOOD MILK COW; or, a Description of all the Marks by which the Milking Qualities of Cows may be Ascertained. With a Supplement on Dairy Cattle, their Qualities, Management and Productive Results, with Hints for Selecting. Illustrated with Engravings.

☞ Samples of the above Books can always be seen at the Office of CALIFORNIA FARMER, where Catalogues will also be found. v7-6

Hydraulic Hose and Pipes.

A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks, with and without Steel Rings. The whole coupling together in the most thorough workman-like manner complete for use, pleasing in the hands of miners the most valuable gold washing apparatus ever yet introduced into the mining regions, and one which is destined to do more for the development of our mountain treasures, than all others yet introduced.

Orders per Mail or Express promptly executed.

BRYANT & CO., 68 Battery street.

P. S.—A full assortment of Rubber and Leather Belting. v7-6 2m

Doings in Congress—Repudiation.

THE National Legislature, as well as our own State Legislature, seem to require "committees of investigation," and these bodies have important and costly committees at work at the present time, at a heavy cost to the nation, sending for persons and papers; and our own State Legislature, by necessity and very justly, are similarly engaged—and these causes compel a postponement of the work of that legislation which is so much needed to give prosperity to the country.

Among the important subjects of National legislation, we notice a bill for a Branch Mint in New York, one for a new Military Academy, a Railroad and Telegraph to the Pacific, Modification of the Tariff, Grants of Land to California for Railroads, Repeal of the Fishing Bounties, and various other important measures.

Great feeling was manifested at Washington on receipt of the action of our Supreme Court in repudiating her debt, and threatening to withhold all appropriations to our State till measures are taken to pay their debts; and with this feeling will come action, and the whole press East will do all they can to bring reproach and scorn upon California for this act of the Supreme Court—and to this will be added everything that will have a tendency *to prevent emigration* from thence to California; but we hope the formation of the Society in New York will awaken to measures necessary to counteract every wrong and unjust report, and to lay before the people there a true picture of California in her real sources of wealth, prosperity and happiness. We rejoice at the formation of this Society, and hope to see a similar one formed on this side to co-operate with them.

For further facts on repudiation, and its effects, see extracts from New York Herald, in another column.

HOLLOWAY'S PILLS AND OINTMENT AND THE KING OF SARDINIA.—Permission was given (by royal letters patent) for sale of these valuable remedies throughout Sardinia, in consequence of his majesty being cured by their means of an Ulcer on the leg. Any wound or ulcer will readily yield to their mighty influence. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box or pot.

SPECIAL NOTICES.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.

WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

A CARD.

☞ THE Report of the Agricultural Society, for the year 1856, including the full Reports of the Visiting Committees to the Farms and Vineyards throughout the State, Reports on the Exhibition, the Annual Address of the President, Address of Col. J. B. Crockett, detailed list of the Exhibited Articles, the Prize Essay on the Potato, with other important matter, is now issued in a neat Pamphlet of about eighty pages, illustrated. Persons desirous of obtaining copies will please address the Office of the CALIFORNIA FARMER, when copies will be forwarded as per order. Price Fifty Cents.

For sale at the Offices of the CALIFORNIA FARMER, State Agricultural Society's Rooms, Sacramento—and at No. 130 Washington street, San Francisco. Also, at Ullman & Co's, J. W. Sullivan's, J. J. LeCount's, San Francisco; Dr. J. C. Cobb, and J. B. Manny, San Jose.

A PERFUMED BREATH

WHAT lady or gentleman would remain under the curse of a disagreeable breath, when by using the "Balm of a Thousand Flowers" as a dentifrice would not only render it sweet, but leave the teeth white as alabaster? Many persons do not know their breath is bad, and the subject is so delicate their friends will never mention it. Poor a single drop of the "Balm" on your tooth-brush, and wash the teeth night and morning. A fifty cent bottle will last a year.

A BEAUTIFUL COMPLEXION may easily be acquired by using the "Balm of a Thousand Flowers." It will remove tan, pimples and freckles from the skin, leaving it of a soft and roseate hue. Wet a towel, pour on two or three drops, and wash the face night and morning.

SHAVING MADE EASY.—Wet your shaving-brush in either warm or cold water, pour on two or three drops of "Balsam of a Thousand Flowers," rub the beard well and it will make a beautiful soft lather much facilitating the operation of shaving. Price only Fifty Cents.

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,

SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

BY EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:

Sargent's Smaller Primer. 16mo; pp 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

H. H. BANCROFT & CO.,
v7-6 3m San Francisco, Cal.

New Cultivator.

THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measure operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.

Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.

All persons are invited to call at the workshop and examine it

R. BEECHING, Manufacturer,
v7 6 3m 35 Pine street, San Francisco.

A House and Garden Wanted.

A PRACTICAL working Gardener would like to take charge of some house and land, to keep it in order and improve it for one or two years, only requiring as payment the perquisites he could make by extra cultivation and sale of vegetables, &c., such as could be grown while keeping the place in order and safety.

Any person going East, or who wish a place kept in order for one or two years, without cost, can have satisfactory bonds that this will be done, if it is a good place, by addressing "T. Y. F." through the FARMER Office, with real name: then the advertiser will call on them.

☞ Please state where the place is v7-5 tf

A Gardener at Shares.

AN excellent opportunity can be given to a good practical as well as scientific gardener, for a series of years. To a person who could command a moderate capital a chance will be given that is permanent, and certain (sic) of paying very handsomely.

None need apply unless they can produce the very best testimonials as to ability and character, and one who is free from embarrassment, and can answer the advertiser fully.

A note addressed to "B. C." through the FARMER Office, with real signature, will receive prompt attendon. v7-5 tf

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever has occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for oureel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The rich man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are in *health* ought to secure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance prompts a habit of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart at times yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Section's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,346 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

NORTHERN ASSURANCE COMPANY,

For Fire and Life Assurance at Home and Abroad.

Established in 1836—Incorporated by Act of Parliament.

Capital £1,250,700 Sterling.

Annual premium for an assurance of $100 on a single life:

Ladies' Department.

LITTLE FOOTPRINTS.

BY EMILY P. LEDERNIER.

[Can words be spoken or a more melodious strain be sung than the following—it is much like that exquisite song of the late Mrs Judson, "My Birdling," that we wish to perpetuate it:]

From my home some weeks a ranger,
Stayed by adverse winds and tide—
Frequent dreams of threatened danger—
Menaced my pet darling Ide.

Oft my heart with tenderest longing—
Yearned to clasp its hope and pride,
But strange, busy matters thronging—
Kept me from my nursling's side.

Days went by, and weeks were ended,
Palpitating anxious fears,
Swift I sped me, phantom-tended,
To the home her sweet voice cheers.

Up the lime-tree walk I wended,
Glancing anxiously around,
But no sign of her was blended
With the landscape's well-known bound.

Then at last down-looking, sadly,
That I heard her, saw her not,
My eye lightened on a land-mark
Close beside our rustic cot.

Mother's heart and bosom throbbing
With a faint ecstatic sobbing,
Down I sank, beside the lilies,
Weeping in my happiest way,
O'er a tiny little footprint,
Fresh and recent in the clay,
Where for pastime she had dabbled,
Leaving there that darling token,
Which so rapturously had spoken,
"She is well enough to play."

THE REPROOF.

"To err is human, to forgive divine."

Whisper it softly when nobody's near,
Let not those accents fall harsh on her ear;
She is a blossom, too tender and frail
For the keen blast, the pitiless gale.

Whisper it gently 'twill cost thee no pain,
Gentle words rarely are spoken in vain;
Threats and reproaches the stubborn may move—
Noble the conquest aided by love.

Whisper it kindly, 'twill pay thee to know
Penitent tear-drops down her cheeks flow;
Has she from duty wandered astray,
Guide her feet gently—rough is the way.

Has she a parent? spare them from pain;
Lead her from error, keep her from sin.
Does she lean on thee? cherish and trust—
God the merciful ever is just.

A Good Wife.

How many wives in California—our tradesmen's wives—would be willing to practice the same self-denial and labor, as cheerfully as did "Mary Norton," to help their husbands over the present crisis? And how much are these virtues needed at the present time!

THE TRADESMAN'S CRISIS.

"The causes of success or failure!" no doubt they are legion. Any writer intending to treat such a subject in its fullness, must prepare for a considerable outlay in the simple raw materials of pens, ink, and paper. This, we need not say, is no part of our intention—the smallest supply of stationery will suffice us; we have, however, the means at hand of illustrating just one aspect of the question, by means of a simple story—perhaps a true one—of an only daughter.

It will be sufficient for the reader's purpose if, passing over the heroine's early history, we observe that, at the period that our narrative commences, Mary Norton, the soul and sunshine of her paternal home, was entertaining the very serious intention of leaving it. "How her father and mother will ever bring their minds to part with her, I can't think!" was the somewhat concerned remark of a neighbor, and—(here our story must proceed in the words of the narrator)—"poor Mary herself felt that it would be a very, very hard thing to leave the dear little cottage in which she had passed so many happy days, and, above all, to live no longer under the same roof with her parents. But then, she loved Edward Norris very much, and she was sure he would be a good, kind husband; for he had always been so steady, and such a dutiful son and affectionate brother. And so hope chased the tear from Mary's eye, and the passing pang from her heart.

"It was the eve of her wedding-day, and she was sitting in the arbor, and talking with Edward about their future plans and prospects. They were quite alone, too; for Mrs. Norton was in the house, busily making preparations for the next day, and Mr. Norton was out.

"'Mary, dear,' said Edward, 'I'm so afraid you won't be able to reconcile yourself to living in a town, after being used all your life to this pretty, quiet cottage. C—— is such a bustling place, too, a great deal more so than L——. It will seem such a change.'

"'Never fear, Edward,' replied Mary, 'I think I could make myself happy anywhere, with some one to love; and, besides, I shall find so much to do, that I shall have no time to waste upon discontented musings.' And Mary's eyes looked so bright and hopeful, that Edward's misgiving passed away, and he thought if *love* could make her happy, it should not be wanting. He was rather disposed to be desponding, and cast down by difficulties; but, since his engagement with Mary, he had been often re-assured by her calm, hopeful spirit, and cheered by her encouraging words.

"The next day they were married, and in a week were settled in their new home at C——. There Mary found (as she had said) plenty to employ her time and thoughts. Edward (who had served his apprenticeship to a bookseller and stationer) was now a shopman in the establishment, and was much esteemed by the principal of the concern for his uniform steadiness and attention to business. His house was near the shop, so that he always came home to his meals; and very comfortable meals they were, for Mary was an excellent housewife, and, though they had only a slender income, she was determined that what they *had* should be laid out to the best advantage, as far as *she* was concerned. Edward loved his wife dearly and increasingly, and he had *reason* to do so; for a '*good* wife is from the Lord,' and is among the most precious and valuable of His earthly gifts. And Mary *was* a good wife, in the best sense of the word, for she was a *Christian*, and had learned to make the Word of God her guide and counselor, believing that the Lord alone could enable her faithfully and diligently to perform her new duties. Regulated and controlled by Divine grace, her naturally cheerful temper was a constant source of enjoyment, both to herself and her husband, and to all who came within the sphere of its influence.

"Five years passed away, and Mary was the mother of three children, while death had deprived her of her kind, good parents. Edward had taken a small shop in a country town a few miles from C——, and had commenced business for himself. But he soon found that a young tradesman has many difficulties and struggles to surmount before he can be fairly established. Instead of the small but certain salary which he had hitherto punctually received, he found that there were considerable expenses to meet, in stocking and altering the shop, while, at the same time, the returns were scanty and uncertain. What could he do? He dreaded getting into debt, which he had hitherto scrupulously avoided. The only alternative seemed to be to retrench their expenses, and yet he hardly knew how to do that, since they already lived as prudently and economically as possible. Their present establishment consisted of himself and his wife, their three children (all very young), an experienced servant who had lived with them ever since their marriage, a young girl who acted as nurse, and a shop-boy. It seemed to Edward out of the question to part with any one of their three assistants, and yet there appeared no other way of saving. Mary had but recently recovered from her last confinement, and he was unwilling to distress her with the fears that perplexed his own mind.

"It was late one evening, when after having closed his shop for the night, he entered their small sitting-room, with a weight on his heart, and a cloud on his brow, which he could not conceal from his wife's observant eye.

"'You're not well to-night, Edward,' she said, tenderly; 'you look tired and worn-out.'

"'A little tired, perhaps; but I'm quite well,' he answered, endeavoring (but ineffectually) to brighten up.

"'Well, try and forget business and all its cares,' said Mary, cheerfully. 'I want to finish this little frock to-night; do come and read to me—I should so enjoy it.'

"With a somewhat melancholy smile, Edward at once complied with his wife's request, and, taking a book from the shelf, began to read. But the words fell mechanically from his lips, while other and different thoughts kept crowding into his mind. He looked at the baby in the cradle by Mary's side, and he remembered the two other children who were asleep up stairs. Here was an increasing family, and, consequently, increasing expenses; while at the same time he appeared to be losing ground every day in his business.

"At last his wife suddenly put her hand on his arm, and said, 'dear Edward! what is the matter? I am sure something disturbs you—do tell me all! I can bear anything better than seeing you look so miserable, without knowing the reason!'

"Thus urged, Edward was at last obliged to reveal the cause of his abstraction.

"Mary attentively listened till he had concluded, and then, taking his hand, she said affectionately, 'Poor, dear Edward! you have been brooding over your troubles in secret, till, I can venture to say, things appear a great deal worse than they really are. You are not in debt, you say, at present?'

"'No; thank God!' replied Edward, earnestly. 'But then, Mary, love, if we cannot manage to save in *some* way, we *shall* get into debt; that is, unless my business brings in more than it does now.'

"'Then let us begin to save at *once!*' said Mary, energetically.

"'But in what way can we do so?' asked Edward. 'We are not living extravagantly in any respect; I don't see, at present, in what way we *can* retrench.'

"'Oh! I've thought of several ways already,' said Mary, smiling, and looking so hopeful and happy, that the mere sight of her bright, animated countenance raised her husband's spirits, and made him feel more sanguine than he had done for many days past.

"Then followed a long conversation, carried on in a low voice, interspersed occasionally with a sigh from Edward, followed by an encouraging word from his wife.

"The next morning Mary rose, full of her new plans for saving and economizing. Her youngest child was only six weeks old, the next could just run alone, and the eldest was four years of age. They made plenty of work, as Mary knew very well; but she determined, in the present state of their affairs, to discharge the girl who had acted as nurse, and to manage with one servant. This was no sooner determined than acted upon, though Edward remonstrated against it in very strong terms, telling his wife that she was undertaking too much—that she would overdo herself, and be laid up. But Mary pleasantly combatted all his fears by telling him that exercise always agreed with her, and that it would be no hardship to her to wait upon her two children.

"In a day or two Edward discovered that Tom, the shop-boy, was of very little use to him, that during a great part of the day he was idle, and, therefore, in mischief. He was accordingly installed in a similar situation, which Edward easily procured for him at a neighboring grocer's, and thus two considerable items were at once subtracted from the weekly expenditure.

"Mary seemed at no loss to discover ways and means to lessen the general expenses, and bore her extra amount of work so cheerfully and uncomplainingly, that her husband loved her better than ever. When he was obliged (as occasionally he was) to leave the shop for a short time, Mary was always ready to take his place, and with pleasant manner and active hand to wait upon the customers. And during all this time the household affairs were carried on with as much care and regularity as ever. There was nothing like disorder or neglect, but all was in its place, and everything done at the right time.

"'I can't think how you manage,' said Edward one day, when he came into the neat sitting-room, and sat down to a comfortably dressed dinner, at a time when he knew Mary was in the midst of a large wash.

"'God helps me,' said Mary, kissing his cheek, 'by giving me strength and forethought.'

"In the course of a few months, from the effects of incessant care and attention, Edward's business began sensibly to increase; and in a year or two, from the struggling beginner, he found himself a well-established tradesman. And he felt and acknowledged that this prosperous turn in his affairs was mainly attributable to the influence and exertions of his wife, who, instead of lamenting her hard fate in being obliged to economize and exert herself in every possible way, had resolutely set to work, and, by her cheerful industry and careful management, had averted a melancholy crisis of failure and disgrace."

The heroic Sir Charles Napier wrote very beautifully and touchingly to a lady on the eve of his great victory at Maenee—"If I survive I shall soon be with those I love; if I fall I shall be with those I have loved."

A WARNING TO UNCLES.

The annexed, an adaptation of a portion of a much-abused poem, which was handed to us, a little explanation will render more intelligible. It seems a resident of the City of Brotherly Love, being induced to make some explorations in the Pine-Tree State, was captivated by the graces of a fair "Minnehaha," on the banks of the beautiful Kennebec. While on a subsequent visit to secure his bride, a fair young niece took the occasion to address him the following:

TO MY UNCLE J——.

As thou wanderest thro' the forest,
With thy smiling Minnehaha,
When the Muskoday, the meadow,
Vies in beauty with the prairie,
And the bullfrog, the Dahinda,
Loudly pipes among the marshes,
Or the river, rushes foaming
Thro' its palisades of pine trees,
While the Opeechee, the robin,
Sings his love-lay in the branches,
And the Adjidaumo listens
To the whispering of the lovers,
Let one thought of thine be given
To thy home, thy friends and kindred—
To the merry playful maiden
Thus her love and thoughts expressing,
Love for all thy care and kindness,
Wishes for thy future welfare,—
Straying in the tangled wildwood,
Noting naught but her thy loved one,
Then forget not how Winonah
Told thee once, "bring not a stranger
To the hearth-stone of thy fathers,
Better far a homely maiden
Of thy country, soil and people,
Than the fairest of a people
From the land of the Down-easters,
Famous for its lovely women."
But "'twere vain to warn of danger,
When the bird is taken captive;"
Who can tell what dreams and visions
Fill the fiery brains of young men,
When they meet some charming maiden
Full of mirth, whose peals of laughter
Ring within the ancient forest
Like the falls of Minnehaha;
Even now I hear thee saying,
"Many a lonely mile I've wandered
With my moccasins of deer-skin,
And my mittens Nadjekeewis,
Searching for some one to please me;
But in all my devious journeys,
Never have I met a beauty
Lovlier than my Laughing-water.
She shall be the starlight, moonlight,
Firelight, sunlight of my people—
And where'er my pleasure leads me,
She, my dark-eyed one, shall follow.
Hark again! I hear complaining,
Him, the father, loved and ancient,
Her the mother, good Nokomis,—
"Thus it is our daughters leave us,
Just when they have learned to help us;
Comes a youth with flaunting feather,
Comes a youth with specious pretext,
Our broad woods and lands to purchase,
Sits down at the wigwam doorway,
Tells of all his lonely travels,
Tells of all his strange adventures,
How he wandered through the snow heaps,
Clad in furs and skins of bisons,
With his pistol, ax and shovel,
Fearing nought from storm and darkness,
Thinking nought of harm or danger."
Thus he talked, till Minnehaha
Learned to tell his wondrous story
In the very words and accents,
That for many an hour had pleased her.
Hiawatha the beloved,
Young in years but wise in counsel,
As he told of want and peril,
Of his travels and his yearnings
Oft for some endeared companion,
Gained the heart of Minnehaha,
Won our bright and Laughing-water.
Peace be with them, though they leave us;
May the Manito protect them,
In his love, and pour his blessings
On their path as when the spring showers
Brighten every smiling meadow.
Farewell! then dear Minnehaha,
Still our hearts to thee are clinging,
Still our love is undecaying.
Shortly shall we meet together,
In the islands of the blessed,
In the kingdom of Ponemah,
In the land of the HEREAFTER.

Take Hold.—What are you looking down for? Hold up your head! The world is just as wide to you as to others, and you are just as good as any one—take hold! Remember the mind is full set with jewels, created there and only obscured by the thin vapors that melancholy dreams beget. What foolish dreams! Take hold! and wait not for circumstances, those limping doorkeepers of renown, expecting to gain their favor by standing still—take hold and make circumstances wait upon you—treat them as your slaves. Look out no longer from the dull chambers of slumbering genius upon the world at labor, but go forth and take hold—see how the busy millions work! They are earning their daily bread and storing away the crumbs. If active hands can bring comfort, wealth and position, what cannot active minds do? If the grosser part of man's structure can sustain the vitality of the whole, what cannot the polished members of the inner temple perform?

Take hold and let the mind labor; hire it out to a desirable object and keep it bent over its duty, like the smith over his anvil, from the dawn until the lamps of the firmament are lit, and until indolence has long been upon the journey of sleep. Let misfortune come; let envy blow upon you its poisonous breath, and taint your sphere with calumny; let age spread thick his wrinkles, and failure roll rocks and floods into your path—heed them not, take hold and hold on! and though you are forced to lodge with ruin until it makes you gray, go forward and let the great object of your hope be the sole object of your life.

Take hold! the glory of a purpose is its accomplishment. Never sacrifice principle for gold, nor honesty for office, and never hesitate to run a race when the reward is great. Obtain first by your *hands* that which will obtain honest bread—then free the *mind*. And always think and feel that you are as good as others. Why, when it was said, "let us make man after our own image," the great mold was not broken, and Adam left the only cast! No, all the secret impress of the Deity, and the stamp of that sublime image makes the man, and bids him claim the right of being called a Man indeed.

How much unprofitable discussion would be prevented if persons were to heed the advice of Locke, who said: "One should not dispute with a man who, either through stupidity or shamelessness, denies plain and visible truths."

v6-19 HINCKLEY, HYDE & CO.

FIRST PREMIUM AGAIN!

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,

SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

v6-14 R. H. VANCE.

91 Washington street, Boston. v6-9 6m

MEDICINES, &c.

FOR THE REMOVAL AND PERMANENT CURE OF

All Diseases arising from an Impure State of the Blood or Habit of the System.

In this preparation are strongly concentrated all the medicina properties of Sarsaparilla, combined with the most effectual aids, the most salutary productions, the most potent simples of the vegetable kingdom; and the combination is such that one modifies and improves the other, producing a compound differing entirely in its character and properties from any other preparation, and unrivalled in its operation on the system when laboring under disease. It has been so fully tested, not only by patients themselves, but also by physicians, that it has received their unqualified recommendations and the approbation of the public and has established on its own merits a reputation for VALUE and EFFICACY far superior to the various compounds bearing the name of Sarsaparilla.

From the Army.

MONTEREY, CAL., January 18, 1850.

MESSRS. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefited as I have been. I arrived here by the overland route, about the first of October last. A few days after I was attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely.

With high regards, yours, &c.,
J. H. MILLER, Lieut. U. S. A.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists and Chemists, 100 Fulton-street, corner of William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

CLOVE ANODYNE TOOTHACHE DROPS.

Complain no more of Aching Teeth.

These Drops have been extensively used by thousands, whose experience has proved that the Anodyne will give immediate and permanent relief after the failure of every other remedy. It is pleasant to the taste and smell, and a few applications will entirely remove the pain and soreness from a decayed tooth, so that it may be filled and rendered as useful as ever. When the pain proceeds from the face, or from the gums around a tooth apparently sound, this Anodyne will give a speedy relief by rubbing a few drops on the part affected.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, No. 100 Fulton-street, corner William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v6-21 3m

MEDICINES, &c.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

L. P. & W. F. DODGE'S DOUBLE ACTING PUMP.

(Patented June 7th, 1853.)

THESE Pumps are double acting, and combine both the Suction and Force Principles. The Pistons are of the best bell metal composition, making them available for use in either hot or cold liquids.

The Cylinder is without divisions or chambers, has no valves at the eduction port, and is bored out perfectly true and smooth. From the construction of the cylinder and water passages, the pistons require no packing, being fitted perfectly to the cylinder. Two important evils in Pumps generally, are thus overcome—viz: the amount of power required to work them, and the wear of the packing. The cylinder and pistons being perfectly true and smooth, it naturally follows that there should be less friction, and, consequently, less wear, than in pumps generally.

The water enters the cylinder upon its side, at each end alternately, passes through the piston heads, and is discharged through the round air-vessel in the center of the pump. These pistons are each furnished with a valve, connected in such a manner that both must operate simultaneously, one valve opening at the precise moment the other closes; consequently these pumps may be run at higher speed than pumps generally.

These pumps have received numerous Medals, Diplomas and commendatory notices from various State and and County Fairs, including Medal and Diploma at the Crystal Palace Exhibition in New York.

The power of a single individual applied to the size usually furnished for family use, is sufficient to draw water from a well twenty-five feet deep, and throw it upwards of fifty feet from a hose-pipe, rendering it a very efficient FIRE ENGINE, ready for use at any moment.

Circulars containing full information relative to size, prices, &c, may be obtained by addressing the

The Farmer's Drill.

[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 28th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.

Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.

This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

For full particulars address

M. G. GRIFFITH, Agent, Diamond Springs, Cal.;
Or to C. FINKBONER,
(Of the firm of G. W. Stewart & Co.),
v7-2 3m* Grain Dealers, San Francisco.

To the Farmers.

THE subscriber would respectfully announce to the Farmers of California that he has now on hand and for sale, on the most reasonable terms, a good assortment of Agricultural Implements suitable to the wants of the farmer at this season of the year, amongst which is an IRON GANG PLOW with Steel Mould and Share;

Every variety of Cast Plows of the most approved makes;
Side Hill Plows; Michigan Reclaiming Plows;
Peoria Plows; and a Cincinnati Steel Mould and Shear Plow, of extra quality; Harrows, Corn Sheller;
Cans of superior kinds for Dairymen.

Just received and arriving by every Clipper.

S. L. PALMER,
corner Washington and Davis streets.

THE AUDOBON OF THE PACIFIC.

[Continued from first page of this number—41

out to give them battle and teach them a lesson—that "the white man was not to be trifled with." As they were armed with only bows and arrows, we "calculated" upon an easy victory. But in this we were mistaken, as the sequel will show. Upon our approaching them, over the barren plains, not yet in rifle shot, they gave us some good specimens of the real genuine Indian war-whoop, and warlike curvetings, and then suddenly disappeared amid the meshes of the tulé swamp; not an Indian could be seen, and all was as silent as the desolate region over which we were traveling. Our party did not hesitate, however; and coming up to the tulé we dashed into it, expecting to see a regular stampede among the Indians. But in this we were sadly disappointed, for we were met with such a hurricane of arrows, accompanied with deafening yells, that we were compelled to make a hasty retreat out of the tulé. Some of our party were badly wounded, among whom was Mr. Whitelsy, captain of the Oregon party. We now held a little council of war, and decided upon some maneuvering. It was agreed, that the portion of our small company who were mounted (four in number), and a part of the foot, should make a circuit around the tulé, which was only a few hundred yards in width, in order to draw off their attention in that direction, and a part of us to remain, cautiously venture into the tulé, and take them by surprise—I was among this party. Messrs. Lippincott, Broughton, and myself slipped into the tulé, some distance, which being too high to see over, without some elevating apparatus, my two companions agreed to make themselves that apparatus, by getting upon their all-fours, whilst I was to stand upon their backs, in order to reconnoiter. This was done; and with rifle in hand, my thumb upon the hammer, I cautiously raised my head above the tulé, when, lo! there stood several black, bushy heads of the enemy, within twenty or thirty yards of me, gazing upon the party that had gone upon the opposite side. As quick as I could bring my rifle to bear upon one of the bushy heads I fired, and then we, in turn, gave the war-whoop, and charged in among them. The Indians, taken by surprise, not suspecting but that the whole party had gone upon the opposite side of the break, immediately fled in every direction to the nearest hills, leaving several of their number dead. In their flight to the hills some were captured, but turned loose again, after being disarmed. They again rallied, after getting upon one of the nearest hills, covered with large boulders, among which they had a kind of rude fort built of rocks, and as we ascended the hill they gave us a warm reception with their poisoned arrows. Indeed they here fought bravely, killing one of the horses dead upon the spot, and wounding the rider so severely that he died in a few days after—a Mr. Salley, a most excellent man. Several of our party were wounded, among whom was Mr. Lippincott. Such men as these were a serious loss to our small party, as they could be relied upon in any emergency. We here fought the Indians the balance of the day, till the sun went down, and, yet, were unable to dislodge them from their stronghold. Many of them, however, attempted to escape, but were shot down as soon as they showed themselves above the black and bare rocks among which they were concealed.

Having recovered the cattle belonging to the Oregon company, some of which were shot with arrows, we returned, with tired limbs, to our wagons, where my wife, together with the other ladies of our emigration, had for us a good supper and a hearty welcome, not anticipating the least fears that any one of the party was hurt; but, as soon as the groans of the wounded were heard, caused by the intense suffering from the effects of poisoned arrows, every heart was saddened, and every feeling was awakened to their care and attention.

With these sketches, we introduce to our readers Col. A. J. Grayson, in the character of an early pioneer to California. Col. G. was among the earliest comers, and he was associated with many of the best men of those times, universally known as one of the early merchants of San Francisco, and was among the successful ones; but the usual perils of fire and flood and other California vicissitudes, induced him to seek a "rural life," where we find him forming a new character and a new life, one that is destned to give him a name and fame, if his life is spared, second only to that one that all nations honor. Col. A. J. Grayson has already won for himself the name of the Audubon of the Pacific, as his works will show, and this, too, without a previous training other than that which nature gave him by wandering in the fields.

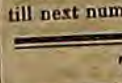
In the year 1854 his attention was given to the Birds of the Pacific, in his gunning excursions, and the Road Runner arrested his attention; this bird he captured, and being struck by its singularity of habit and character he sketched it with his pencil and then painted it. This was his first effort; one or two others were in like manner painted and hung up in his library, without ever thinking he would continue that pursuit—it was mere pastime. These drawings were seen by a friend, and he was urged to exhibit them at the State Fair held at Sacramento in 1855; he did so; they were acknowledged as works of great merit, and the first prize of a silver cup was awarded him. This not only surprised, but encouraged him, and he gave new effort and more care to this pursuit, and his productions attracted great notice. The Smithsonian Institute at Washington recognized his works, and sought the aid of his pencil and brush, and this awoke his genius. At the late Fair at San José, he obtained the first prize again for Drawings; and thus, step by step, he makes known his eminent ability in this line. We know we shall be supported by abundant testimony, when we say he has had no equal in the department of Ornithology, save Audubon himself.

Col. Grayson is destined to win a name and fame commensurate with his eminent abilities, and we regret to know that California is to lose him for a little time, as he leaves for Central America soon, to sketch the birds of that region. He was prepared to leave in the steamer of this day, but very sudden illness prevented; he leaves as soon as his health will permit. His lady accompanies him, and it is but justice to say, in his amiable lady he has an aid and assistant rarely vouchsafed to man in such an adventurous life.

We have much more of interest to give our readers, but want of space compels us to defer till next number.

TRAVELING.

California Steam Navigation Company.



ARRANGEMENT FOR OCTOBER 1st, 1855.

Departure from Pacific street wharf, at 4 o'clock, P. M.

CARRYING UNITED STATES MAIL.

Steamer NEW WORLD, Capt. Samuel Seymour;
" ANTELOPE, Capt. E. A. Poole;
" CONFIDENCE,
" WILSON G. HUNT,
" HELEN HENSLEY Capt. E. C. M. Chadwick;
" J. BRAGDON, Capt. Thos. Seeley;
" URILDA, Capt. E. Z. Clark;

Please notice the Lettering of the Coaches, "Rassette House." v7-3

PACIFIC MUSEUM,

Corner of Clay and Kearny streets.

INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!

THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Worf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montez.

☞ A full Brass Band is in attendance every evening. Open every day and evening (Sundays excepted).

EDUCATION.

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by CORNELIUS J. FLATT, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17TH of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS: PER MONTH

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.

No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.

For further information or references, address the Principal.
v6-24 C. J. FLATT.

Young Ladies' Seminary, Benicia.

MISS MARY ATKINS, : : : : : : : PRINCIPAL.

THE School Year of this Institution is divided into two terms of five months each; but the term commencing January 5, 1857, will close May 1st, 1857, in order that the semi-annual vacations may take place hereafter in May and October.

At the close of each term there will be a thorough examination of the pupils in all of their studies.

The Course of Instruction is such as is usually pursued in High Schools, and also includes the accomplishments of Drawing, Painting, Vocal and Instrumental Music.

The government of the school is gentle, but decided. A daily account of the recitations and deportment of each pupil is sent, monthly, to the parents, who are thus regularly informed of the progress of their daughters.

All of the pupils board either with their parents or at the seminary, and are under the special care of their parents, or of the teachers of the Institution.

The School is open to inspection at any time, and friends are cordially invited to visit it; but no pupils can receive calls from any persons, excepting those introduced by the parents and guardians to the principal.

TERMS: PER MONTH

Tuition in the Higher English Studies	$ 8 00
" " Common " "	6 00
" " Music and use of Instrument	10 00
" " Ancient and Modern Languages	5 00
" " Drawing and Painting	4 00
For Board (per week)	6 00
For Washing (per session)	25 00

No extra charge will be made for Vocal Music or Embroidery; neither are the pupils required to furnish their rooms, bedding, &c.; but each pupil must have every article of clothing distinctly marked with her name.

Payments are to be made invariably at the beginning and middle of each term, in advance.

THE "HORTICULTURIST" AND Journal of Rural Art and Rural Taste.

COMMENCED BY A. J. DOWNING,

Author of "Landscape Gardening," "Designs for Cottage Residences," "Fruit and Fruit Trees of America," "Country Houses," etc.

Edited by J. JAY SMITH, Editor of the North American Sylva.

THIS popular publication, which is gradually extending its influence throughout the country, and is becoming indispensable to the tasteful Gardener, the Fruit Culturist, and the Floriculturist, will be continued under the editorship of J. Jay Smith, whose ability and taste in matters of country life are highly appreciated through the country.

The cultivation of the beautiful, both in Nature and Art, is justly esteemed an important element in education, and recommends itself to the attention of all who wish to make their dwelling and grounds attractive, and to surround themselves with those luxuries and adornments that spring from the fruitful bosom of the earth when cultivated by the practical hand. The typographical execution of the HORTICULTURIST is designed to be an index to its contents—neat, chaste and elegant. It embraces within its scope—

I. THE DESCRIPTION AND CULTIVATION OF FRUIT AND FRUIT TREES—a subject of vast importance, and in which we are already more interested than any other people.
II. THE DESCRIPTION AND CULTIVATION OF FLOWERS AND FLOWERING PLANTS AND SHRUBS, from the most delicate and tender to the most hardy and robust.
III. TO THE DESCRIPTION AND CULTIVATION OF ALL EDIBLE PLANTS, which are, or should be, grown in our gardens.
IV. TO GARDENING AS AN ART OF TASTE—with Designs for Ornamental or Landscape Gardening.
V. TO RURAL ARCHITECTURE—embracing Designs for Rural Cottages and Villas, Farm Houses, Lodges, Gates, Vineries, Ice Houses, etc., etc.
VI. TO ARBORICULTURE—or the Planting and Culture of Forest and Ornamental Trees.
VII. TO BOTANY AND ENTOMOLOGY—so far as these branches are connected with the general subjects to which the work is specially devoted.

The extended and valuable correspondence of THE HORTICULTURIST presents the experience of the most intelligent cultivators in America; the superior illustrations, and the instructive and agreeable articles from the pens of the editor and contributors, make it eagerly sought after by even the general reader interested in country life. To all persons alive to the improvement of their gardens, orchards, or country-seats—to scientific and practical cultivators of the soil—to nurserymen and commercial gardeners, this Journal, giving the latest discoveries and improvements, experiments and acquisitions in Horticulture and those branches of knowledge connected with it, will be invaluable.

A New Volume (12th year) commences with the January number for 1857; and it will be the constant aim of the editor and publisher, by every means in their power, to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style of the periodical press, each number containing 48 pages, embellished with a frontispiece and several other original and well-executed engravings. At the end of the year it will make a volume of six hundred pages, beautifully illustrated with over 100 engravings, many of them drawings of fruit and flowers from nature. These volumes, if taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature.

TERMS—Two Dollars a year—Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the art—Price, $5.

☞ All subscriptions must be addressed to the Agents, or to. ROBERT PEARSALL SMITH,
v6-22 tf 17 and 19 Minor street, Philadelphia.

SEEDS, &c.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

ALSO,—CHUFAS, or EARTH ALMONDS; NEW ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE, OR, SORGHO SUCRE.
PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Syrup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 30 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,
W. P. ORME, Atlanta, Georgia.
ATLANTA, November 7, 1856. v6-22

Dwarf Pears	20 varieties.
Plum	12 "
Apricot Plum	6 "
Foreign Figs (now in fruit)	7 "

All the best varieties of Apple, Peach, Nectarine, &c.
3,000 Los Angeles Grape Vines, now in fruit, three years old.
Strawberry Plants, &c.

Persons wishing to furnish their grounds will do well to visit the above Nursery and select for themselves, bearing in mind that to insure the healthy growth of a tree, it should be transplanted in the fall.

For particulars inquire of S. L. PALMER & CO., agents, corner of Washington and Davis streets, San Francisco, or to GEO. B. COOK, Proprietor.
v6-10 3m

United States Nursery,
On the New Mission Road, San Francisco.

THE Proprietor of this large Nursery and Garden desires to call the particular attention of the friends of Horticulture to the collection now offered, among which are the following:

Fruit and Ornamental Trees;
Roses, of every choice variety;
Green-house Plants, and Garden Plants.

Together with every article needed in Orchard, Garden, Greenhouse, Parlor or Garden.

The undersigned would most respectfully invite purchasers to visit his Garden and Greenhouses. Having been long established in the business he is confident he can furnish everything desired, as agreeably as any other establishment.
v6-21 tf JAMES O'DONNELL.

Shell Mound Nurseries AND FRUIT GARDENS,

Near Brooklyn, Alameda county, directly opposite San Francisco.

THIS well known establishment is now prepared to offer to its patrons and the public in general, an extensive and varied assortment of Fruit and Shade Trees, Shrubs, Plants and Vines, comprising almost every article usually found in the Nurseries of the Atlantic States.

Our stock of Apple, Pear, Peach, Plum and Cherry Trees, we believe is of a quality unsurpassed in California.

Catalogues, with prices annexed, will be furnished on application.

All orders, accompanied by remittances, will receive prompt attention. Please address
R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco;
Or, JASON L. SANFORD, Agent, Brooklyn.

P. S.—We expect to receive in December from 50,000 to 70,000 Trees, Shrubs, Plants and Bulbous Roots, from the East, on the arrival of which a supplementary catalogue will be issued. v6-18 2m

Pioneer Nursery.

THE undersigned, proprietor of this now well established Nursery, to which was awarded the First Premium by the State Agricultural Society at its last Annual Fair, announces to his friends and patrons that he is prepared to offer them, the present season, a collection of Fruit and Ornamental Trees equal to any in the country, and far superior to any heretofore offered.

Having had in bearing last year, forty-seven kinds of Apples, and having in bearing the present year, about thirty-five varieties of Peaches, added to the knowledge we have acquired by comparing them with other varieties grown in various localities, we have been enabled to ascertain with certainty what kinds are worthy of culture, and such varieties only do we offer to the public the present season.

We call your attention particularly to our Seedling Peach, named by the Academy of Natural Sciences "Myers' Rareripe," which we offer this season for the first time. The following certificate will speak for itself:

ALAMEDA, July 25th, 1856.

The subscribers having seen and eaten of the new variety of Peach grown by A. H. Myers, in his "Pioneer Nursery," Alameda, and by the Academy of Natural Sciences of San Francisco named "Myers' Rareripe," do cordially and unhesitatingly pronounce it a most valuable acquisition to the Pomology of our State, in regard both to its early ripening, and its melting, luscious qualities, being in these respects superior to any variety of Peach that we have yet met with on this coast.

George Lee, Lee's Garden, Oakland.
Henry Gibbons, M. D.
N. W. Palmer, firm of Sonntag & Co., Horticulturists.
T. J. Nevins, Amateur Gardener.
A. M. Crane, County Judge.
Wm. Sherman.

We speak to our friends and patrons thus early, that they may be apprised of our ability to supply them with all the desirable varieties of Fruits, and thus save the trouble and expense of sending out of the country for Trees; and we can assure them that time and money will be saved by giving us a call.

Our stock embraces—
40,000 Apple Trees, forty varieties, one, two and three years old;
30,000 Peach Trees, in bud, best varieties;
4,000 Peach Trees, two years old, "
1,000 Pear Trees, "
1,000 Cherry Trees, "
1,000 Plum Trees, "
1,000 Apricot Trees, "
1,000 Nectarine Trees, "
Also, Almond, Fig and Quince Trees;
25,000 Currant Bushes, with a sprinkling of everything rich and rare, usually found in a well regulated Nursery.

We particularly invite our citizens to our Nursery and examine for themselves before purchasing elsewhere. Information respecting the best varieties of fruits, and the planting and pruning of them cheerfully rendered.
A. H. MYERS,
v6-19 3m Pioneer Nursery, Town of Alameda, Alameda Co.

Smith's Pomological Gardens AND NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast.

Care and experience in selecting and propagating varieties are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear,
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Allanthus, and China Tree.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—1,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

*** Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.
A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *having for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ J. F. SWIFT, No. 1 Washington Market, is Sole Agent in San Francisco for Smith's Pomological Gardens.

Agricultural Reviews and Essays---No. 4.

Agricultural Societies.

"Official Report of the California State Agricultural Society, 1856."

"Blackwood's Quarterly Journal of Agriculture."

"Journal of the Royal Agricultural Society of England."

Man is intended to be a social being; to confer by his individual pursuits benefits upon society in general, and to receive from society benefits in return. There is no art or profession in which he engages, in which he does not minister to the common good, as well as to his own; nor any employment which he undertakes, in which knowledge beyond the scope of his own observation is not of service to him. The common sense of mankind admits the assertion, and their common practice confirms it. A little consideration, too, will enable any one to perceive, that in no occupation is individual effort, unaided, and isolated from those who are engaged in the same business, more likely to result in abortive, rather than successful attempts to promote the general interest of others, or of ourselves, than in Agriculture. Hence the advantages of Agricultural Societies. To use the eloquent language of the President of our California Society: "It does a man good to get acquainted with men whom he excels, and quite as much with men who excel him. In the one case, it kindles a laudable pride; in the other, it strengthens that magnanimity which gives to others their due."

But the benefits of Agricultural Societies, when properly conducted, do not stop here. They have been made to furnish information of a much more extensive character than one can expect to derive from conversations with his neighbors, and a mere acquaintance with the appliances of Agriculture, within the petty limits over which local associations exercise supervision. I consider, therefore, that on the present occasion, when our Agricultural Society proposes to ask from the Legislature of this State increased aid to enable it to carry out those objects, which it ought to be assisted to prosecute in a vigorous manner, that the people of California should also be aware of what they have a right to expect from a Society which they are called upon to support, and be fully convinced of the efficiency with which it is conducted, and the manner in which the funds have hitherto been applied.

To enable them to form some conclusion in the matter, the Society has this year very properly published an official report of its Transactions, and given an ample detail of the generally laborious proceedings of the several committees, who were employed in the performance of the different duties, which they were respectively called upon to discharge.

The first and most prominent labor undertaken by the Society, was to award premiums for the best Farms, Gardens, Vineyards, Orchards, Nurseries, &c., over the whole State. This involved an Herculean task; and every one is obliged to admire the manner, in which the Committee appointed to perform that onerous duty have discharged it.

They commenced at the Mission Dolores. To Messrs. Sonntag & Co. they gave great praise. They inspected the well-arranged grounds of the energetic Mr. Center. They called at Mr. O'Donnell's. They paid a visit to Mr. Walker; and made a sort of general inspection of the gardens in San Francisco. From San Francisco they sailed in the steamer for Sacramento City; and they went on, traveling over the whole State, having a kind word for all, going from farm to farm, and from house to house with increasing admiration, as they witnessed the successful operations of our agriculturists and gardeners, and with an untiring devotion to the cause in which they had engaged. There is but one instance in which I would not feel proud in indorsing every word which they have written. "It being inconvenient for any other members to visit Los Angeles county, the Recording Secretary (Rev'd Eli Corwin?) accompanied by Davis Divine, Esq., made a visit to the lower country." There, they were not content with taking notice merely of the farms and gardens, as in duty bound, but of a little circumstance also, which they introduce by way of an episode, which it strikes me they might have omitted. "A two-year old grizzly having been caught in the barley-field the night previous to our arrival, the natives belonging to the establishment amused themselves, just after we came up, by tying the fore-leg of a bullock to the hind-leg of the bear. After several tossings and huggings, while we were faring sumptuously at the table of the Don, his bearship, we were informed, took just *one* horn too much, and died from the effect of an extemporary bowel complaint." The traveler Bruce relates with horror, how the natives of the barbarous country of Abyssinia, not unlike our committee, indulge unfeelingly in their festivities, while the living animal, on whose flesh they are feasting, is bellowing and bleeding to death at the tent door. But not one word of censure is heard from our reverend visitor; but a low joke is thought so good, that it must be included in the Official Report. How different were the feelings and conduct of Captain Brown, as described by Scott in his Guy Mannering! When the poor badger, which the honest Dandie Dinmont was hunting after his own fashion, had vigorously withstood the repeated assaults of the whole pack of his "pepper and mustard" terriers, the heart of Brown was so melted as to make him interpose and ask his life. It is true Dandie was surprised at the proposal, but he readily conceded the request. "We will lug-mark him," he said, "and nobody will touch him after that, for he will be known as the Captain's brock. But Lord! man, wha wad care for a brock?" How different too were the feelings of Uncle Toby! "Do not be afraid, I will not kill thee," said my Uncle Toby, as he opened the window to allow a large fly, which had been buzzing about for some time, to escape. "God help thee! poor fellow, I will not kill thee, there is room enough in this world for me and thee too!" What can the civilized inhabitants of the Atlantic States and of Europe think of us, when they read such unfeeling and unnecessary anecdotes?

It may be doubted, however, whether it is absolutely necessary for the Society to send forth their emissaries on such errands; or at all events, to accomplish the work of inspection in the way which they do. The two great Agricultural Societies of Great Britain seldom undertake, with all their wealth, such extended investigations—such matters being left almost invariably in the hands of local Branch Associations in connection with the parent Society. True, there is no reason why we should imitate them, or any other Societies. But why lay on the shoulders of our Committees so onerous a task, which can be more easily, and more efficiently discharged in another way?

This is not the only alteration which I would propose. The whole affair looks as if all the energies of the Society were expended in getting up a State Fair. Indeed, I very much doubt whether the Agricultural Essays, received by the Society, were looked upon by the Committee who inspected them as other than a sort of model toys on exhibition—to be examined, and treated, as exercises written by tyros for the approbation of those who were competent to judge of style. On this point the Society apparently stands in need of information, and wants reform. What could be the use of the Society asking to have such essays presented by their authors, by the first day of August, and then through their committee stating that they had "only read them once in a cursory manner?" There can be but one conclusion—the essays must have been villainously bad.

In England, as well as in Scotland, Agricultural Essays are looked upon in a very different light. "At the Monthly Council, No. 5, of the Royal Agricultural Society of England, Mr. Evelyn Dennison, M. P., President, in the Chair, Mr. Thomson, Chairman of the Journal Committee, reported that the Judges of Essays had made the following adjudication: To Mr. Thomas F. Jamieson, Factor for Mr. Gordon of Ellon, Aberdeenshire (Scotland), the prize of forty sovereigns ($200), for his Essay on the Chemical results superinduced in newly deepened soil by Atmospheric action." (Magnet of Nov. 10, 1856.) Here, our committee are not content with a simple adjudication, but proceed to quibble about style; and gravely tell the public, that on the real subject which they were called upon to consider, they are not competent to decide. And the general Committee, probably actuated by the spirit of Caleb Balderston, "for the honor of their house," receive their report. "*'Twas strange, 'twas passing strange.* But they did so. And why did they?" says some wicked fellow. "Take Hamlet's answer," says another, "*Thrift, thrift, Horatio!*" There was no other way to avoid paying away too much money, and the society had prudently appended to their Prize List a proviso, in which they stated, "The Judges appointed will in every instance withhold premiums on animals or *articles*, which in their opinion are not worthy, though there be no competition." "So you see," continues our friend, who must be a very bad man to speak so irreverently of *dignities*, "they had not only provided a loop-hole of escape, through which they might pass, and skulk securely behind the respectable Sherman Day, but a breach large enough for a coach-and-six to drive through, with the same worthy gentleman mounted on the top of it." I confess, I feel ashamed to mention such things, especially as I am in some respects a party concerned. But people will talk.

The Show! the Show! too much attention to the Show, and not enough to the graver duties of an Agricultural Society. Even ladies must be exhibited on horseback. Why is this done? I will answer the question myself. At the conclusion of the Anglo-French War, when the allied sovereigns of Europe paid a visit to England, out of respect to a people who had done so much to subdue the Great Napoleon, the Emperor Alexander of Russia was one of the most courteous, and most deservedly popular. He was everywhere among the people; and seemed to take a delight in witnessing their humblest exhibitions, and partaking in their every-day amusements. On one occasion, as he was walking along the streets, he observed the owner of a petty menagerie exhibiting his elephants, and other wild animals, at the low price of one shilling. It struck him that he would like to see the effects of such sights on the wonder-loving Englishman. So he walked up the steps, and paid his shilling like the other visitors. The exhibitor at once recognized him, and concluded to turn his visit to good account. So, running outside, and seizing his speaking-trumpet, he announced as loud as he could bawl: "Unusual opportunity! The price is raised to two shillings; but you may now see, in addition to the Elephants, the emperor of Russia—one shilling for the wild beasts, and one for the emperor. Only two shillings, ladies and gentlemen, for seeing the elephant, and the other wild beasts, and the emperor of Russia! Walk up, ladies and gentlemen." Our ladies, on these occasions, are used as a sort of decoy-ducks, for the purpose of drawing people to the Fair. I am sorry that they should allow themselves to be used for such a purpose; especially as the "man wot owned the donkey" gets as high a premium as the best of them.

These objections may be considered as of too trifling a nature to be gravely entertained. But there are also grave objections to be brought against the manner in which the affairs of the State Agricultural Society have been managed. I observe that Pioche, Bayerque & Co., for the benefit of the Society, and to enable them to pay the several premiums promptly, cashed State Scrip to the amount of $1000; B. Davidson, of $500; and that other respectable Bankers, and Companies, were equally liberal and accommodating. Now, how did the Society make their premiums payable? By appointing some of those Banking Houses as their Bankers? and by taking care that the Corresponding Secretary should, immediately after the adjudication had taken place, forward certificates to the parties who had obtained premiums, containing an order on such Banking House (in San Francisco) for their payment? No! The Society are content with publishing in the California Farmer a notice, that "all premiums would be promptly paid at sight, on application to Dr. J. C. Cobb, *at San Jose.*" But who is likely to go to San José for a premium of five dollars? or ten dollars? or fifteen dollars? or fifty? I would like to know how many of the minor premiums are still unpaid, and in the hands of the Treasurer? The State has generously set apart for the use of the Society an yearly sum of $5,000, on the express condition that the whole amount shall be annually *paid out* in premiums, and not on any account used for other purposes. If the whole amount has not, in any one year, been actually paid as premiums, the balance does not belong to the State Agricultural Society, nor to its officers, but to the people of the State of California; whose money it really is, and for the proper distribution of which, the office-bearers of the Agricultural Society are only trustees.

I think it would have been well, for the satisfaction of the public, that the Society, when they concluded to publish an Official Report, should have presented at the same time their accounts in full from its commencement; showing the whole of their real disbursements, and for what purposes they have been applied. The State ought to give far more than $5,000 to the annual support of the Agricultural Society; for such an institution properly conducted would be the making of the State. But the people have a right to get a little more insight of the Society's matters than they now have, before they give them a single cent; and they should also be assured that their business is conducted, in a way becoming the character of California as an Agricultural State, and indicative of an amount of intelligence inferior to no portion of the civilized world. At present our Society is rather behind.

AGRICOLA.

A garden that is well kept, is kept easily. You must conquer weeds, or weeds will conquer you.

Subsoil Plows.

In the year 1840, Ruggles, Nourse, Mason & Co. imported from Scotland, the first subsoil plow ever in the United States. Although an effective implement, it was too complicated, cumbersome and costly to suit the American farmers; and the importers therefrom made a plow of equal capacity, but much lighter, of simple construction, better adapted to practical use, and of a less price. It being well received by the public, the manufacturers were induced to make several sizes, which have been used with satisfaction in different sections of the country.

The subsoil plow follows directly after and in the channel made by the plow turning the surface soil, loosening and pulverizing the lower soil to any desirable depth, without bringing it to the surface. The subsoil plow is specially valuable in lands where the top soil rests upon hard-pan but a few inches below the surface; and in lands of a stiff clay or other tenacious soil. Although at first thought it may seem a paradox, yet in the working of such lands the use of the subsoil plow is of great advantage, both in dry and wet seasons. If permitted to do so, plants will, in a dry season, extend their roots deeply into the earth; and by use of the subsoil plow the stiff under soil or hard-pan is opened and pulverized, so as to promote the ascent of moisture from below, as well as permit the roots of vegetation to push lower down, and away from the more parching influence of the sun: again, lands of a stiff compact soil, are in a wet season, naturally too cold, clammy and moist; but by being deeply loosened and opened, the excess of moisture filters below, the surface soil thus relieved is made light, mellow and warm, and the crops prosper accordingly.

Wrought Iron and Steel Subsoil Plow.

This plow is made of wrought iron and steel. Its effects are to disintegrate the soil at considerable distance each side as it passes, with much greater ease, and in a better manner than the subsoil plows which raise the soil higher, as it leaves it better disintegrated, and less in lumps, admitting the light and air more completely and equally. It is found to double a sod corn crop, by passing after the sod plow, in first breaking of prairie, to loosen the unturned soil and allow the roots to spread freely.

Text Book on Agriculture for Schools.

We have received a copy of this invaluable little book, "Waring's Elements of Agriculture," from the publishers, Messrs. Appleton & Co., of New York, and we are delighted with it.

This book has been introduced into the Public Schools, of several States, by acclamation. It presents to students the science of agriculture in so pleasing and simple a garb, as to win their attention and interest, and lead them, step by step, to appreciate and love this noble science.

This work is invaluable, and should be in every family, so that children may be permitted to learn important truths. It is a work also that should be introduced into the Public Schools of every State of our Union. This work is dedicated to Prof. J. J. Mapes, Esq., by the author, a pupil of the Professor. We give a brief introductory address of the author to the student, in the opening of the book, showing the purpose of the work:

This book is presented to you, not as a work of science, nor as a dry, chemical treatise, but as a plain statement of the more simple operations by which nature produces many results, so common to our observation, that we are thoughtless of their origin. On these results depend the existence of man and the lower animals. No man should be ignorant of their production.

In the early prosecution of the study, you will find, perhaps, nothing to relieve its tediousness; but, when the foundation of agricultural knowledge is laid in your mind so thoroughly that you know the character and use of every stone, then may your thoughts build on it fabrics of such varied construction, and so varied in their uses, that there will be opened to you a new world, even more wonderful and more beautiful than the outward world which exhibits itself to the senses. Thus may you live two lives, each assisting in the enjoyment of the other.

But you may ask the *practical* use of this. "The world is made up of little things," saith the proverb. So with the productive arts. The steam engine consists of many parts, each part being itself composed of atoms too minute to be detected by our observation. The earth itself, in all its solidity and life, consists entirely of atoms too small to be perceived by the naked eye, each visible particle being an aggregation of thousands of constituent elements. The crop of wheat, which the farmer raises by his labor, and sells for money, is produced by a combination of particles equally small. They are not mysteriously combined, nor irregularly, but each atom is taken from its place of deposit, and carried to its required location in the living plant, by laws as certain as those which regulate the motion of the engine, or the revolutions of the earth.

It is the business of the practical farmer to put together these materials, with the assistance of nature. He may learn her ways, assist her action, and succeed; or he may remain ignorant of her operations, often counteract her beneficial influences, and often fail.

A knowledge of the *inner* world of material things about us will produce pleasure to the thoughtful, and profit to the practical.

The Farmers' Prospects.—A correspondent, writing from Santa Cruz, 21st inst., says that they have had plenty of rain of late, and farmers' prospects are very fair, for good crops, the coming season. We could give an hundred instances, all over the State, where the same feeling prevails. Our correspondents from every section write in the same cheering strain. The crops of the past year have paid well, and the future is full of bright hope for the farmer. On this strong basis we can rest as a sure guarantee of coming prosperity to our State.

The Champion of the Turf in California—Gen. Taylor.

That California has shown fine horses, and fast horses, no one can doubt, for there is no State in the Union that has recorded better races, or races showing more bottom, than has our State. The late two Races at the Course has shown, that we have here in California, horses, that, for speed and endurance, cannot be beaten, if they can be equaled, by any race on record. The first great trial of this champion that occurred, secured him the envy of every competitor. We give below the time of that race.

Pioneer Course, Friday, February 6th, 1857.
Match for $2,000—$1,000 a side, rain or shine, play or pay—for ten miles. New York to go to wagon, and Gen. Taylor as he pleases.
J. M. Daniels' g. s. Gen. Taylor (to sulky)....1
G. N. Ferguson's b. g. New York (to wagon)...2

TIME.	Half.	Mile.	Total.
1st	1.25	2.54	
2d	1.27	2.51	5.45
3d	1.26	3.00	8.45
4th	1.27	2.57½	11.42½
5th	1.27	2.58½	14.41
6th	1.26	2.55	17.36
7th	1.28	3.00	20.36
8th	1.29	2.59½	23.35½
9th	1.27½	3.01½	26.37
10th	1.35	3.04½	29.41½

This signal success provoked another trial, and one almost without a parallel. The result of which race we give below, from the Town Talk:

Union Course, Saturday, February 21st, 1857—
Match for $4,000; $2,000 a side; to go in harness thirty miles—to rule.

14th "	3.28	46.32½	29th "	4.14 1,43.48
15th "	3.39	50.11½	30th "	4.29 1,48.17

This was the crowning act of this victorious and noble animal, and we may say that Gen. Taylor stands before the public as the fastest racing stud on the Pacific Coast.

But while we make these records of the turf, we cannot but feel that such tests of the endurance of this noble animal appears to us a species of inhumanity—a cruel and useless trial. Five, eight, or ten miles, would be a sure test, marking the time as a greater distance; and this would not subject the animals that do so well, to a risk of life and usefulness.

Corns.—The best cure for these troublesome things that we have ever tried, is to soak the feet in hot water for a quarter of an hour, so that the corn becomes soft, and then trim it off as close as possible, and not cause pain. Then take the tincture of the Arbor Vitæ, placed upon a little cotton and apply to the corn, and after a few applications the corn will not only disappear entirely, but will not be likely to return again.

The Condition of the Soil of the South—Its Improvement by Subsoiling.

The following excellent editorial, from the South Carolina Agriculturist, will so well apply to many portions of California, where the practice in plowing and manner of cultivation is so erroneous, that we give the article entire, containing as it does so many scientific and practical truths. Deep plowing, subsoiling and constant cultivation will, restore soils and give to them vitality and strength oftimes more immediate than cords of manure and poor plowing; for the sun and air will subtract the goodness of the manure, and the earth having no depths to nourish the roots or retain the manures, the labor and cost are half thrown away. We hope this subject will receive more attention than it has in time past:

We have spent the days since we last held communion with our readers, in reflections upon the best modes of remedying the increasing sterility of our cultivated soils. It is humiliating in the extreme, to see no permanent fertility effected by improved methods of tillage upon our plantations. It is true, there has been some excitement concerning, and a considerable application of *imported* fertilizers amongst the cotton planters; but, this will result in no enduring improvement of the soil, for the increased production will only serve to swell the amount of the exported material, taken from our fleece-bearing fields; whilst the practical operation of skinning the soil will be increased in the same ratio. We would gladly see millions of tons of guano applied to the cotton fields of the South, if we could also see introduced with this application, accompanying systems of deep and thorough plowing and subsoiling, so that whilst the stimulated over-production of the soil was yielding its returns for the capital employed in the purchase of fertilizers, some regard was paid to the formation of a deep and perfectly pulverized soil, upon which the planter could rely in coming years. This alone can be effected by subsoiling—and we say so confidently, because reason, observation and experience, point out this as the only mode by which the desired amelioration and improvement of most of our exhausted soils can be accomplished. We know that we have prejudice and ignorance, and that sanctity which the tyranny of ancient customs always intrude upon what are termed innovations, to contend with in our recommendations, but, nevertheless, it is our province to speak and reason in advocacy of our system, based, as it is, upon the most practical and convincing foundation. There has been progress in plowing as well as in mechanics—and in planting operations, the same. There is much to be learned by those who consider themselves most perfect.

Let us begin by statement of facts, and see what unbroken ground we have upon which to predicate our subsoiling operations. The average depth of the cultivated soils in the South, is not *three inches*. Below this, in the lower country, wherever there is not a deep, underlying stratum of sand, there is invariably a bed of hard-pan, which prevents the surplus water from descending, and the roots of the cultivated crops from penetrating. From the level character of this section, the surplus water does no damage by washing, but, collecting in partial indentations, forms ponds, scalded or sour places, upon which nothing but unprofitable plants of aquatic habits flourish. Upon the more elevated portions of the country, the disastrous effects of our sudden and violent rains are more apparent; for the underlying stratum being of stiff and compact clays, allows no precipitation of the surplus water, which, not finding a road downwards to accommodate its natural specific gravity, rushes down the inclinations of the hills, and, swelling into torrents in the valleys, sweeps off, with each rain, a proportion of the soil and its fertilizing constituents in solution, never to be returned by the ordinary processes of nature, and but too seldom by the assisting aids of man. A soil naturally wet, as well as one naturally dry, is thus frequently surcharged with an amount of water prejudicial to the production of good crops, from these causes alone. The common depth of the soil, as we have shown, is by far too shallow to allow the roots of our cultivated crops to penetrate below the influence of the droughts of summer, or hot, dry temperature in the season of their growth. The examples of alluvial or bottom land, where the depth and permeability of the soil in all seasons, exhibit a growth superior to the other classes of upland cultivated fields, shows what we should attempt to make all our lands, and what they could be made by proper operations of soiling and manuring.

We have shown, in a former article, the fact that ammonia, the vital food of all plants, is found in large quantities in rain water. We have just said that a superabundance of rain water, when uncontrolled, works great destruction to our cultivated lands, by sweeping off the pith—the marrow of our soils. What would be the effect if we were to break up the tenacious, impermeable, underlying stratum of clay—without turning up that clay to the surface—to the depth of one or two feet below our cultivated soil, by the practicable operation of the subsoil plow? Would not benefit be derived by thus loosening the subsoil, so as to allow the surplus surface water to descend, to be held in reserve for the after requirements of the crops, and at the same time storing up the precipitated ammonia and gradually enriching that soil for after use? What would be the atmospheric influence on the soil? The frequent stirring of the soil is practical proof that the free admission of air to the roots of plants is of vital use to their accelerated growth, and this fact, though not reflected on by many of those who industriously stir the soil, is the secret of the true benefits derived from frequent tillage. Air rises readily through water, but it requires great power to force it downwards. The loosening of the subsoil allows the penetration of the air to the lowest limit to which the operation is carried; and this air there remains, until the atmospheric change of temperature above the surface, by natural laws, causes it to ascend, and it is at this stage that it works its benefits upon the crops, and in dry weather invigorates them by furnishing to their delicate spongelets, or rootlets, the proper and invigorating food which it yields to them. We ask a simple question to make our position clear to the most simple reader: "If we place three inches of the best mold upon a hard, flat rock, would any such results as these follow, when crops planted on that stone required more moisture than was furnished by the falling rains?" The advantages of a deep subsoil, allowing the roots of the crops to descend as far as they can find congenial temperature and proper food in the soil, are incalculable; and again, this permeability of the subsoil, permitting the upward passage of water by capillary attraction, affords a double protection against drought. Here the bigot may attempt to stop me by saying, "*water only finds its true level;*" but this received law of nature is exploded by simply placing a sponge upon a shallow vessel of water, or referring to that system of irrigation so common in the cultivation of pot flowers, where all the necessary moisture to support even gross water-feeding plants, is derived through holes in the bottoms of the pots, from saucers, and which is freely drawn up from six to eighteen inches by this ductile power residing in disintegrated mould. The subsoil of our fields is usually too compact to admit either the downward or upward passage of water, and there are, no doubt, innumerable locations all over the State, where the surface is parched, so as to preclude vegetable production, whilst the simple operation of breaking up the subsoil would, within a few inches, release a deposit of moisture which would gladly rise to the sunlight, and relieve the unsightly sterility above. A uniform system of shallow plowing has a tendency to create a crust upon the bottom of the furrow, which is extremely prejudicial to vegetation, and, aside from the mechanical effects upon the soil, resulting from subsoiling, the chemical action produced by the introduction of atmospheric influence below the surface-soils, and the gradual exposition of their locked up ingredients to this influence, is extremely beneficial.

When we have a depth of earth broken up and properly pulverized, it is unreasonable that, even if it is what is termed poor, it will, by allowing wider range to the roots of cultivated crops, greatly increase their production. The practical examples of the rampant production of weeds and briers—requiring good soil to induce luxuriant growth—which are to be seen on the clays thrown up and exposed on our railroad lines, is convincing proof that *deposited red clay* itself is rich in fertility, when subjected to the proper treatment. Clays, too, hold in solution, with so much tenacity, the essentials of fertilizers, that it is always extremely profitable to deepen such soils in the progress of improvement by manuring. The operation of subsoiling is simple, and, if properly done, always effective of beneficial results on any soil. We believe it essential to all soils, and, from experiments, intend to extend our operations in this line, until every foot of land we cultivate is subsoiled; and when we have accomplished this, we will commence again, and add a few inches more to the depth of our soil by repeating the operation.

Storing Turnips.

The Mark Lane Express has the following on storing turnips, etc., and details experiments, showing the greater value of stored turnips as compared with those fed from the ground:

In a recent trip through Hampshire and the eastern portion of Sussex, we remarked the steady increase in the growth of mangold, and the care with which, during the past month, it was storing in straw and earth-covered clamps. A few days more and swedes will have also to be thus protected from the influence of frost. We well know that most of our readers are not unaware of the importance of the root-storing system; but few of them have perhaps deemed it necessary to institute comparative trials as to the nutritive qualities of the stored and unstored. Such trials, however, have been recently completed by a Scotch farmer—Mr. J. Porter, of Monymusk—and his account (which will be found in the present volume of the Prize Essays and Transactions of the Highland Society) is full of sound practical information. Two lots of cattle, rising two years old, four in each lot, were tied up on the 28th of January, 1855, in the same byre; were fed daily with the same weight of turnips, and oat straw *ad libitum*. Of these two lots the first were fed with the golden-yellow turnips produced in the same field; one, however, with stored turnips, the other with the turnips as they were required from the field. They were weighed when they were put up, and again on the 22d of April, when the following results were obtained:

The four fed on stored turnips.

	Weight in January 28. Cwt.	qrs.	lbs.	Increased weight April 22 Cwt.	qrs.	lbs.
1	8	0	0	0	3	14
2	8	2	0	0	2	14
3	8	0	14	0	3	7
4	9	2	0	0	2	14
Total increase				2	3	21

The weight of the four fed with pulled turnips.

	Cwt.	qrs.	lbs.	Cwt.	qrs.	lbs.
1	9	0	0	0	2	14
2	7	2	14	0	1	7
3	9	2	7	0	2	7
4	8	0	0	0	1	14
Total increase				1	3	14

Here we have nearly double the increase of weight in the cattle fed on stored turnips over those fed with the roots left exposed to the weather and pulled as they were wanted.

The observations of Mr. Porter on the best mode of storing roots, are well worthy of our readers' attention. He is evidently more fearful of the effects of even a slight frost upon the swedes whilst they are storing, than of the ill results of some degree of moisture. He prefers, therefore, of pulling and storing the same day; and advises these stores to be placed at the homestead, as near the byres as convenient, and sufficiently large to contain six or eight weeks' consumption.

The practice in the district of our reporter is to erect these stores of wood, of an oblong shape, six or seven feet wide, to give room for a cart, and about four feet high. The sides are made of two rows of posts, fitted into the ground, about six feet apart, and made close with backs of trees or any old wood. The wood-work is erected piecemeal as the storing proceeds. If wood is scarce, oblong rigid heaps are employed, about seven or eight feet wide at the bottom, and these heaps are thatched with about six inches' depth of straw. It is hardly necessary to enlarge upon the necessity, in turnip storing, of avoiding cutting the bulb of the turnip in removing the bottom and tops, or of rejecting the finger and toed roots.

It would seem, however, from the result of the most recent of observations made in Scotland and the north of England, that this formidable disease does not occur to any extent on land which has been recently limed. Upon the importance of these valuable northern observations we need hardly enlarge, since they tend in the most practical of all directions—to the preservation of our turnip crops from disease, and from injury during those winter months when we have little else to rely upon for the supply of our cattle yards.

Mange in Swine.—I have noticed in one of your late papers an inquiry for the cure of what we "backwoods" people call mange in pigs. Permit me to assure you that I have a *never-failing* remedy, to wit: Give the pig or hog affected, (according to age) from ten to twenty grains of arsenic twice a week for three weeks, feeding him plentifully during the time, and I warrant that he will soon shed off, and become perfectly well, fat and slick. *It will also cure the worst case of mange on any dog.* I speak from experience, and there is *no* danger of doses of that *size* killing either pigs or hogs.—[Cor. of Coun. Gent.

The Grape Crop of Ohio for 1856.

We append below a statement of the grape crop of the Ohio Valley, for the past year, with the effects of the late cold winter upon the vine and its products. We copy from the Farm Journal and Progressive Farmer, and present these facts as of great moment to the growers of the vine in our State.

We ask attention to the facts here given, and we ask also that it should be remembered that even in the wine-making countries of Europe crops fail very frequently, and now, in the best portions of the United States, frequent losses of crops must occur—while, so far as can be learned, the crop of the grape will never fail on account of the seasons in California.

Here have we presented to us one of the most valuable evidences of the prospect before us in the cultivation of the vine and for the manufacture of our own wine.

We ask also that particular notice should be given to the wines of California, that are now attracting the attention of the public mind not only here but in the East and over all Europe:

The grape crop of the Ohio Valley during the past year was a very small one,—probably not more than an average of 80 to 100 gallons to the acre. The severe winter injured many of the vineyards seriously. Some of the vines were killed down to the ground, and about half the buds in others were destroyed. The "rot," or mildew, also injured some of the vineyards very much. But a bad season with the grapes, like other fruits, must be expected to occur occasionally. Experience thus far has proved that the grape is about as reliable a crop as the apple, and perhaps more so.

A fair average crop, for a series of years, is found to be 250 to 300 gallons to the acre, in well cultivated vineyards in the Ohio Valley. The cost of producing this crop will not exceed $50 to $60 per acre—even less, with proper economy.

This cultivation is largely on the increase all over the west and southwest, wherever the conditions are supposed to be favorable; and the consumption of the wine is fully equal to the production. It is now estimated that there is in Vineyard culture, over 4000 acres in the Ohio valley. About half this quantity is in the vicinity of Cincinnati, and probably three-fourths are now in bearing. In the Missouri valley there are about 700 to 800 acres; and in the Upper Mississippi valley 500 to 600 acres.

In Tennessee, Alabama, South Carolina and Georgia, several vineyards of the Cahawba grape have lately been planted with flattering prospects, thus far, of producing far better crops than those of the Ohio valley. How they will hold out is yet to be tested.

Growth of the United States.

The following compact and interesting sketch of the growth of the United States during the past year we take from the Washington *Globe* of the 10th inst.:

During the past year the prosperity of the United States has received an unexampled development. The various sources of true national wealth, the cultivation of new lands; the increase of the crops, the extension of manufactures, the working of mines, the import and export trade, foreign and home commerce, the construction and working of railroads, the growth and embellishment of cities, have all wonderfully increased, and, by adding largely to the capital of the country, have given such impulse and activity to business of all kinds; that it has far surpassed the best result of any preceding year. The growth of property is but partially shown by the published statements of the Secretary of the Treasury, inasmuch as the fiscal year of the Government closes with the 30th June, and, while the results of those statements embrace and are largely affected by the business of the latter half of 1855, they do not include that of the latter 1856. An approximate idea of the business of the year can be formed by examining tables of the commerce on finances of New York in 1856. The transactions of the New York Clearing-House for 1856, show an increase of $1,700,000,000, or thirty per cent. on those of 1855, making the total for the year amount to the enormous sum of $7,300,000,000. The transactions of the London Clearing-House in 1859 amounted to $4,772,000,000. They amount now probably to triple that sum. If so, the business of New York is equal to half that of London. In the imports and exports of New York, there has been an increase of thirty-three per cent. on those of 1855. The increase in railroad traffic has been from twenty to thirty per cent.

The increase in the cultivation of new lands, one of the chief elements of our prosperity, is shown by the large sales of those lands; and by the grants of the public domain, amounting to seventeen million six hundred thousand acres, nearly four times the extent of Massachusetts, or more than Belgium or Holland united. Besides these large appropriations Congress has granted during the year to railroads, or to States that will sooner or later partially make a similar disposition of them, about twenty-one million seven hundred thousand acres; making a total of sales and grants in a year of thirty-nine million three hundred thousand acres, equal in extent to Virginia, or to almost a third of France. Notwithstanding the great decrease for so many years in the Federal domain, the public lands yet remaining unsold in the Territories are equal in extent to the presented thirty-one States, or more than all Europe except Russia. Farming and industrial production has kept pace with other departments. Its approximate value as estimated by the Secretary of the Treasury from the remains of the census of 1840 and that of 1850, was, during the year 1856, about $2,000,000,000, or triple that of 1830.

The Secretary estimates the value of the entire property of the United States, taxed and not taxed, at $11,317,000,000 exclusive of the public domain. He estimates the population at 26,964,312.

At the close of 1855, there were 21,069 miles of railroad. There are now more than 24,000 miles. The telegraph, which does so much to diminish the loss of interest on capital, and to quicken business, by annihilating, as it were, the "magnificent distance" of our territory, now extends in almost every direction throughout the States. It is estimated that the aggregate length of our electric telegraph is from forty to fifty thousand miles.

Our merchant marine has made great progress during the year. They have constructed two hundred and twenty-one steamers, and seventeen hundred and three sail vessels, with an aggregate tonnage of 496,394 tons. Notwithstanding this large addition, the official lists show a decrease in the tonnage of the merchant marine on that of 1855, caused by a more careful examination of the old lists, the effect of which has been to drop from the account a large number of vessels sold abroad, lost, or long since condemned.

During the year, the Federal Government has reduced its debt to twenty-five per cent. It now amounts to $30,000,000, with a residue in the Treasury of 22,000,000, after the payment of all demands. The President states that this debt can be entirely extinguished for the second time, (it having been entirely liquidated in 1835-6) by the beginning of 1858, and he recommends that Congress take measures to prevent the injurious effects that would necessary be produced by too great an accumulation of specie in the Treasury. The statements of the financial affairs of the various States show everywhere a high degree of prosperity. The different cities, counties and railroads, throughout the Union, are in a like flourishing condition. The banks, except a few in the Eastern States, are also generally prosperous, in consequence of the prudent restrictions put upon their transactions by the several Legislatures, and by their own private directors. The Clearing Houses of New York and Boston, the former established in 1853, the latter in 1855, have a wide influence. They may be considered as the indispensable complement of the free banking system. To the salutary influence exercised by these institutions, may be added that of the guarantee, first demanded of the banks by a law of the New York Legislature, and since exacted by the Legislatures of other States, of a deposit with the State to secure the redemption of bank notes. This latter regulation must prevent the risks of paper money, and the possibility of such excessive issues as preceded the crisis of 1837. The increasing proportion of gold as a circulating medium, since the acquisition of California, the system of specie payments adopted by the Government since 1840, and the safe rule for some time pursued by it of making no loans whatever for any purpose, to associations, cities, counties or States, are additional securities for the permanence of our monyed and commercial prosperity.

Our foreign commerce has grown from $499,000,000 to $642,000,000, an increase of thirty per cent. There has been a reduction in the national debt of $41,000,000 from $10,000,000 to 15,000,000, at premiums of ten and fifteen per cent. have been paid on European claims, and $10,000,000 for the purchase of the Mesilla valley, which equals in extent the kingdom of Belgium; our trade with Canada, under the new treaty, has increased from $20,000,000 in 1853, to $50,000,000 in 1856; our railroads, which in 1855 were 16,000 miles long, are now, as already stated, over 24,000 in length; and the mines of California have supplied us with about $170,000,000 in gold, which has paid for our foreign imports, and furnished a residue sufficient for our domestic wants. This residue is obtained by deducting from $170,000,000, the amount of gold received, 129,000,000, the amount of specie exported, giving in three yeaes an addition of $41,000,000 to the circulating medium of the country.

Meanwhile, our tonnage has increased 1,200,000 tons, or twenty-five per cent.; the cultivation of new lands, judging by the sales of public lands, covers an extent of 27,000,000 acres, equal to the State of Ohio, or the kingdom of the Two Cicilies, while the total amount of land sold and granted for various objects, has amounted to 81,800,000 acres, almost equal to New York, Pensylvania and Ohio, or to the British Islands and Belgium.

Important Scientific Explorations.—The N. Y. Herald publishes some very interesting particulars of several exploring and scientific expeditions of various parts of the world. The most important of these is the one recently fitted out by the Viceroy of Egypt, to discover the source of the White Nile. In connection with the recent discoveries of Dr. Livingston, it may result in the development of the whole river and lake system of the African continent. According to M. Jomard, the navigation of the river at the present day is open to Egyptian commerce. For twelve years past European merchants traffic peaceably with the natives, and collect a large amount of ivory. The whole country, in effect, appears swarming with elephants; but the rivalry of trade provokes frequent disorder, without speaking of the imprudence of merchants, who are sometimes guilty of violence towards the inhabitants. These latter are peaceable, hospitable and thickly settled upon either bank. Disputes and quarrels having led to serious tumults, the Epyptian government has introduced a precautionary measure; Egyptian posts have been established upon the White Nile, and the various commandants are charged to protect commerce and the natives, and, at the same time, to prevent the abuses of rivalry. These armed posts and forts have garrisons which render them respected. On the other hand, the Austrian mission has an establishment at Khartoum, and a second one of less importance at the fifth degree of north latitude. The missionaries are on good terms with the natives of the country.

This enterprise, which has for its object the discovery of portions of the African continent now unknown, is commencing under the most favorable auspices, and holds forth the happiest results to science, commerce and civilization. Our travelers began ascending the Nile at the commencement of last october, and it is believed they will return within two years.

Mercantile Prosperity.—A New York paper remarks: "It is seldom that a case of such continued prosperity can be chronicled in the history of any mercantile firm as in that of the Messrs. Howland & Aspinwall. About thirty years ago, the commercial firm of G. E. & S. S. Howland was formed in this city. They were engaged principally in the West India Trade. Ten years afterwards the partners retired from business, wealthy, leaving behind as special partners, $200,000 for their successors, Messrs. Howland and Aspinwall. A few years further on, and the members of this firm also retired, leaving the same amount, as special partners, to a junior Messrs. Howland & Aspinwall; and recently, these latter, have, too, retired, leaving $200,000 for still younger members of the same name and style of firm."

Death of Hugh Miller, the Geologist.—By the steamer Asia, at New York, from Liverpool, we have the mournful intelligence of the death of Hugh Miller, the celebrated Scotch geologist, who was found in his house shot dead. It is supposed that the sad event was accidental. Mr. Miller has achieved a world-wide reputation as a geologist, and as a man of great powers of research and scholarship. His death will be universally deplored as a great loss to the world of science.

Remember that every person, however low, has rights and feelings. In all contentions, let peace be rather your object than triumph. Value triumph as the means of peace.—[Sydney Smith.

An eminent painter was asked what he mixed his colors with to produce so extraordinary an effect? "I mix them with brains, sir," was his answer.

KATE VINTON'S FIRST QUARREL. A Lesson to Wives.

BY ADELAIDE H. RIDDLES.

CHAPTER I.

"Ye that would have obedient wives, beware
Of meddling woman's kind, officious care."

Well, Sir Tobin, I will acknowledge that you are right in some respects, but you know the adage of *rules* and *exceptions*. However, we will look at both sides of the question, first allowing you to be right, and then proving that you are—sometimes wrong.

Kate Vinton, with her sunny smiles, was one of the prettiest little wives in the whole town of Mountford, and when she married George, there was not a young man in the aforesaid town but envied the happy bridegroom. 'T is true, that old gossips shook their heads, and said that Kate was too quick-tempered and obstinate to lead a happy life with one who was quick-tempered and obstinate, too; but then they loved each other; so they were married and—settled.

Two months of rose-colored felicity passed by, and then came clouds over the sunshine.

In consequence of the illness of his employer, one afternoon, George's work was brought to a stand-still, and he therefore returned home at the hour of three, instead of the usual one of six. Now Kate thought this would be a good opportunity to go down town, and call on one or two friends; but George had made up his mind to spend a quiet afternoon at home. Neither would succumb to the other; so Kate went down town by herself, and George remained in his domestic domicile to console himself with the reflection that his wife preferred other people's society to that of her husband's.

"Oh, well," said George, firmly, "I don't see why I should submit to her caprices; since she can find pleasure elsewhere—so can I. When I was insane enough to get married, I gave up the society of all my old associates to please her; but I have no doubt they will be glad enough to see me amongst them again."

So, rising with a determined air, he put on his hat, and, a minute after, was seen wending his way to their old rendezvous.

When Kate returned home, it was half-sorrowfully, for she felt a kind of depression upon her spirits; but she had not the least intention of "making it up;" oh, no! "She was not going to be tyrannized over, and he must not expect it. He should see that she had a spirit. There was a time when he felt proud to go out with her; but now, of course, he was tired of that sort of thing."

What was her astonishment, upon entering the little parlor, to find it vacant. The fire (which the chill autumn day rendered quite necessary) had died away, so that he must have been absent some time. She was a little amazed, but instantly set to work, relit the fire, and proceeded to get ready the tea.

Five o'clock came; the fire was blazing brightly, and the tea kettle singing like a merry sprite, as though it was the best-natured tea-kettle in Mountford; the tea-pot was on the hob, and the plate of buttered toast, all brown and crisp on the fender; whilst the little painted clock behind the door beat an accompaniment to the tea-kettle's song, with its unvarying "tick, tick," each vibration being a sweep of the unerring scythe of the reaper, Time; and each moment as it flew, being a bright blossom bound up in his sheaves.

Six o'clock came, and the toast was still uneaten, and the tea untouched. Katie began to feel her temper rising like a whirlwind.

"I shall wait no longer," she pettishly exclaimed. "If he chooses to stay out till this time, he may get his tea the best way he can. I shall not wait for him!"

With this brave determination, she sat down, and proceeded with her tea; but that wholesome beverage might have been compounded of glue and starch—lime, for what she could have told; and she felt so vexed that she did not care whether she was eating buttered-toast, or a slice of mahogany buttered with turpentine.

She sat, with her lips drawn up into the most successful pout, and her eyes fixed upon the tea-tray, scanning the exquisite painting upon it, of a basket containing several bunches of distorted looking grapes, and half-a-dozen apples and plums, tinted with colors that no one but the artist ever dreamed of.

Being satisfied with the appearance of the great effect of art, she silently commenced her autograph upon the said tea-tray, using for her pen and ink the end of a teaspoon, previously immersed in the milk-jug. Having attained some proficiency in this novel trade of chirography, she started up, and, with the greatest determination, commenced clearing the table, when a ring came at the door of the little cottage. Katie opened it slowly, as the frown upon her face deepened into one of "midnight gloom."

"Good evening, Mrs. Vinton. I thought I would just call and ask you how you were getting on."

Kate looked up. It was not George, after all, but a neighbor, of the name of Miss Blackit, an unmarried lady of a certain, or rather uncertain age.

Miss Seraphina Blackit was on the wintry side of forty. Her sylph-like form towered up to the extent of five feet eight, which somewhat accounted for its extreme thinness, and skeleton-like appearance, which gave you the idea that she had originally been stout; but, by some strange freak in nature, she had since been *rolled out*. Her disposition was decidedly *acid*, and had she been analyzed, the following would have been the result: sulphuric acid, 40; essence of lemons, 30; cream of *tartar*, 30.

Having been for twenty-three years in the pursuit of that valuable household article, a husband, and having most singularly failed, she had come to the conclusion that the "grapes were sour," and tried, with great *acid*-ity, to convince all young wives that they ought to be of her opinion.

In reply to Kate's invitation, she carefully untied the strings of her bonnet (which, in defiance of all prevailing fashions, she persisted in wearing *on* her head, and which somewhat resembled an antique coal-scuttle) unrolled herself out of a huge shawl, in which she had been swathed like an Egyptian mummy, and seated herself in the arm-chair.

"So you're quite alone, are you, Mrs. Vinton? You must be very lonesome here. 'Tis true, I live alone, but then I have no husband, thank Heaven! If I had, I should expect him to stay at home a *little*, and not roam about in the streets of evenings."

"George has merely gone down town to pay a visit to some friends," said Kate.

"Oh, indeed! Then I must have been mistaken when I fancied I saw him going into Hand's billiard-room just now, laughing and talking with half-a-dozen young fellows."

The color fled from Kate's cheeks, as she exclaimed—"No, no; 't was not George."

"Indeed, my dear, it was; and you must be very blind if you don't see that his conduct is greatly changed since he has been married. He

never used to play at billiards, and leave his home of evenings."

"True," sighed Kate.

"Ah, it 's just like all the men! They are the greatest hypocrites upon the face of the earth—all honey and love before marriage, and all vinegar and temper after. Now, you know, my dear, that I speak only for your good; but if you put up quietly with such treatment, you have less spirit than I think you have."

Kate's eyes flashed proudly, as she answered—"I will *not* submit to it."

"That 's right, my dear; show him that you have a will of your own, and can exert it. Why should you be compelled to lead a miserable life, fretting and grieving at home by yourself, whilst he is enjoying himself with his boisterous companions, and wasting all his money. It 's cruel, but it is the way of the world. Poor woman is always the victim, always a slave! Talk of poor negroes being slaves! why, it 's nothing compared with poor wives!"

"He shall not make a slave of *me!*" said Kate. He thinks he has to deal with a child, but he shall find out his mistake!"

"You are perfectly right, my dear. Of course, I have no motive but your own good, for it makes no difference to me; but when I see a young, trusting wife so shamefully treated, why, I naturally feel an interest in her welfare; and I am sure, my dear, you will not attribute it to any other motive?"

"Oh, no, Miss Blackit, certainly not. I am sure that I am very much obliged to you for your kindness."

"It is no kindness on my part," said the disinterested Blackit. "I feel that it is my duty. I'm sure—as I said to Mrs. Mason, the other day; says I—'When men can so far forget what is due to their wives—to the beings they have sworn to love and honor—to the fond, confiding creatures who have resigned happy homes for their sakes—when men can so far forget what is due to them as wives—as women—why, it's quite time——'"

There is no knowing to what interminable length this flowery harangue might have been extended, but at this moment the little clock with its clear, silvery voice, rang out the hour of nine.

"Dear me," said Miss Blackit, "I had no idea it was so late; I must go, for I have one or two other calls to make. I promised Mrs. Simpson to call and see her little Jane who is very sick. I think the poor child will never get over it; looks shocking bad; I don't think it's taken care of properly; not that I think it's the poor mother's fault, though they say that she visits a great deal, and neglects her home; she is not to be blamed, for her home cannot be a very happy one, for, between you and me, her husband drinks, the wretch! and I *have* heard say that he treats her like a slave."

With this, she again donned her antique coal-scuttle, robed herself in her Egyptian mummy-cloth, and with sundry warnings to Kate, that she was not to give in to her brute of a husband, she departed.

When Kate was alone, she finished clearing up the little parlor, and sat down before the fire. There was an air of comfort in that little apartment, with its closed window-curtains, its neat and simple furniture, and its brightly-blazing fire, and as Kate glanced round the room, she murmured——

"Miss Blackit is right. I do all in my power to make his home comfortable, and yet he deserts it for the billiard-table, wasting his hard earnings. It's shameful! when he comes home, he shall repent it. By Heaven I will *not* bear such treatment."

Still the minute-hand went on its endless road, with unvarying but slow step, like a weary horse in a traveling circus, and then came ringing out the hour of ten.

"Ten o'clock, and he has not returned. I have a very great mind to lock him out. It would only serve him right; where can he be?"

But there came no answer to her question, save the monotonous tick-tick of the little clock. Several times a step approached, and then Kate would start, and the expression of her face grew more sullen, more tempestuous, but the footsteps died away, and all was silent.

Kate rose and paced up and down the room, in no very enviable state of humor.

"*Eleven o'clock!*"

Eleven. He never stayed out so before. His latest hour for returning had hitherto been half-past nine—Kate's firmness was giving way, her lips quivered, and the tears were just springing to her eyes, when the sound of a footstep caused her to suppress them, and with the same old look of determination, she advanced towards the door. The sound of the bell caused her to open it, and with a firm step and sullen look, George entered.

He passed her by without a word, and lighting a candle was about to leave the room again in silence.

"Where have you been all the night, I should like to know. I think it's a great pity that you have returned at all."

"I have been," answered George, "where I could find that pleasure which it was useless to seek at home, and I returned, because I wished to do so. I suppose this is my own house, and I can enter and leave it when I please."

And without waiting for another word from Kate, he left the room, and ascended to his chamber.

Kate felt her constancy flying from her, and she had a great mind to sit down and cry; but her old obstinacy rushed to her aid and she firmly exclaimed—"No, by Heaven, he shall not trample over me. I'll let him see that I have a spirit as proud as his own. If he thinks that I am a spiritless child, he shall find that he is sadly mistaken. If he does not repent his conduct of to-night, my name is not Kate Vinton."

And with this brave determination she retired, and the little cottage was soon in darkness.

CHAPTER II.

Strange, how a few heedless words, a single hasty action can separate two hearts which have been so firmly, so fondly bound together; and too often one rash speech will lay the foundation for the eternal severance of two loving souls.

The next day brought but a repetition of their tempers—the same reproaches, the same obstinate determination not to yield.

The evening came, and George again sought the society of his old associates, and spent the hours at the billiard and card tables, then returned to his home to listen to the same bitter invectives, to utter the same harsh retorts.

A week passed away, and no word of reconciliation had crossed their lips, no feeling of love sprung from their hearts, as a blade of grass in the parched desert, and each were determined that that rubicon of words—the *first*, should never pass their lips. In George's soul, the poison had spread, the influence of his associates was exerting its power over him, more and more each day, until he really wondered how he could have been so blind to his own happiness as to resign their society for that of a woman.

It was on the evening of the ninth day that Kate was seated alone in her little room, waiting as usual for the time to pass, until the hour of twelve should bring her husband home. There was an expression of care upon her face, and her cheek had grown more pallid, but there was the same firmness depicted in every line of her features.

A ring came at the door.

"Who can that possibly be?" asked Kate, as she proceeded to unfasten the door.

"Is this the residence of Mr. and Mrs. Vinton?" asked a female voice.

A glance of recognition passed between them, and in a moment they were in each other's arms.

"Why, my dear old schoolmate, Emma Dale. Oh, how pleased I am to see you. Come in, and tell me where you have been all this long time."

Accepting the invitation she entered, and seated herself. Laying aside her bonnet she disclosed a pretty, good-humored face, surrounded by a "wealth of dark brown hair," and as pretty a pair of dark blue eyes as ever glittered with mirth, or shed tears at sorrow's call.

"And so, Katy, you are married to George, after all. I thought that would be the finish of all your moonlight ramblings, and mysterious interviews. Married and happy—eh, Kate?"

Kate seriously shook her head, and a tear stole up to her eyes as she answered:

"No, Emma, I am not happy. When we were first married, our life was like one long summer's day, a thing of flowers and sunshine. Now, alas! 'tis bleak as winter. Emma, we have known each other for years, ever since we learned our simple tasks from the same books, and I can confide in you as in a sister. My husband no longer loves me. He seldom speaks to me, and when he does, it is with coldness. He leaves me all the long evenings by myself, whilst he seeks the society of others, and passes his time at the billiard table. I am very wretched, Emma. Would to heaven that I had never seen him."

"Hush! hush! Kate," said Emma, reprovingly. "That is wrong; and, besides that, it is useless. Since the past is irretrievable, your whole thought should be directed to the future. Ask yourself, Katy, how far the fault lies with yourself. Have you done all in your power to cause him to love his home? Have you been loving, gentle and forgiving?"

"What," said Kate, with flashing eyes, "would you have me crouch before him, and, like a hound, lick the hand that spurns me? No, Emma, by Heaven, he shall find that *my* spirit is as proud a one as his own."

"Kate," said her friend, "you are wrecking your own happiness forever. All men are liable to error, but did you ever hear of one who was led back to the right path by reproaches, or who loved a home where his only welcome was a frown?"

"Well," admitted Kate, "perhaps you are in the right, but still, I don't see why woman should always be a slave to man's caprices; to be gay when he is mirthful, sorrowful when he is sad. But a brighter day will yet arrive, when woman will occupy her true sphere, and when her rights will be universally acknowledged, and then——"

"Then she will have lost her greatest charm, the one which idealizes her with the sweet word *Home, her right!* She has them now; a gentle, loving woman wields as proud a sceptre as any of earth's mighty monarchs; whilst her law is love, she will ever gain obedience from her subjects, and whilst her dominion is home, she will ever reign with undisputed authority. But let her once quit her own realms, or seek by the laws of annexation, to appropriate the domains of science, she will be treated as a usurper, and from that moment her bright love-power will fade."

"Well, Emma, you may be right in the abstract; but I do not see how it will apply to my individual case. You surely would not have me ask the forgiveness of a man who I consider has done me wrong?"

"You *'consider.'* But does that *prove* that he is wrong? If you think it humiliating to ask forgiveness, why should he not think the same? You are still inflexible. Kate, have you ever thought how fearful a thing it is to be a *drunkard's* wife?"

Kate started at the words, and the solemn manner in which they were spoken touched her heart; but, recovering herself, she said:

"There is no fear of that, Emma. My husband's worst fault is a love of billiards, and an occasional game at cards. He never was an intemperate man, and drunkenness is his aversion."

"But who knows," said Emma, "how long it will remain so? A month back, and if any one had suggested that he should desert his home for the society of his former companions, he would have resisted the temptation, and scorned the proposal. Yet see how familiar a thing it has grown to him; step by step they may lead him on, until he is irrecoverably lost. Then, Kate, how sad will be your lot. To see the look of pity cast upon you whenever you leave your house, to bear the pangs of hunger until the light of your taper grows pale before that of the dawning day. His heart will grow harder and harder, until all its own love will be swept away, and harshness, perhaps brutality usurp its place."

Kate burst into tears, and exclaimed—

"Oh, Emma, for pity's sake be silent. I should never live to see him so changed; it would break my heart. I feel that I have been in the wrong, and I will try to lead him back again."

"Do so, Kate. Even should your entreaties fail at first, they will at length succeed, if you only show him that he is still dear to you. And if his heart is hardened, be patient with him, and reflect that it may have been caused by your reproaches."

"Heaven bless you, Emma," sobbed Kate. "I will try for the future to make him happy, and be to him a gentle, loving wife."

"That's right, Kate; you may find him at first rather an unwilling pupil, but your trouble will be amply repaid by the first fond kiss of love, or the first happy evening you will spend together beneath this roof."

At this moment the hour of ten sounded.

"So late," said Emma, "and I promised aunt to be home by nine. You must come and see me, Kate. I shall only stay here a short time; but aunt was so anxious to have me visit here. Good-by, for the present, and don't forget my injunctions."

And with a kiss of love, the warm-hearted girl departed.

When she was gone, Kate sat and meditated, and pouted her pretty lips, and rocked herself in her chair.

"Well, it is a hard task, but I can but try, and perhaps, after all, George loves me. Oh, if I could but feel sure that he did, how happy I should be."

Eleven o'clock came round again, and George's well-known footsteps bounded near. Kate's heart beat at a slightly accelerated rate as she opened the door.

George entered with his usual look of sullen obstinacy, and sat down like a man prepared for the worst. But, contrary to his expectations, Kate took up her work and proceeded with it, as though she was the happiest of wives. He felt slightly uneasy; he wished she would say something, if it were only a reproach. He could have borne that; but to watch her sitting there so silently, and contrasting how wearily the night must have passed with her, whilst with him it had flown so merrily, somewhat touched his heart. At least the silence grew irksome. So, turning to her, he said, calmly—

"Well, Kate, why don't you begin?"

She raised her eyes from her work, and looked quietly at him, then replied—

"Begin what, George?"

"Why, your usual amount of scolding."

"I have done with it forever, George, and will strive for the future to make you love your home by giving you no pretext for quitting it. I know that I cannot offer you any great inducement to leave the society of your male companions, but God grant that the time will come when you will grow weary of it. Then, George, you will be my own husband once again."

George felt unhappy at these words. His conscience began to tell him that he might have acted differently, and have been happier. He had a great mind to ask her forgiveness; but then to supplicate to a *woman*—how unmanly; and if his male companions should hear of it, how they would laugh at him. No, no, he was not going to be her slave—to stay at home and go out just when she pleased. So, without making any reply, he went to his chamber.

When Kate found that her words had proved of no avail, and that he had left her without one word of reconciliation, her courage forsook her and she wept. But the thought of Emma's words somewhat reassured her. "Even should you fail at first, you must in the end succeed; and the first kiss of love will amply repay you."

The next morning passed without a word. Kate felt the words rise up to her lips, and the tears start to her eyes; but she repressed them, and she saw him leave the house to attend to his daily duties, without a look of sorrow, or word of reconciliation.

Evening came, and as the clock struck six, he entered for his tea; but he still was silent. The meal being over, he rose and took up his hat.

Kate's fortitude was leaving her. She never expected for a moment that he again would leave her without a word of kindness, or promise of amendment.

"George," she softly said, "are you going out again this evening?"

"Yes; I promised to be there by half-past six."

He paused, waiting calmly to hear a torrent of reproaches, but he was mistaken. Kate had schooled herself nobly, and only said—

"You will not stay out *very* late, George?"

His conscience began to trouble him, and he really wished that she would passionately reproach him. Her gentle words were harder to bear than all her bad temper.

"No, Kate, I will not," he answered, and left the house.

"Alone," said Kate—"alone once again, with a long dreary evening before me, and he never casting a thought upon me. Oh, I fear he will never more love his home. The poison has entered his mind too deeply. Had I but dealt kindly with him at the first, he might have been my own husband, long ago, ere this; but my reproaches have hardened his heart, and his love is now lost to me forever. Heaven help me, I am very wretched."

The work fell from her hands, and, laying her head down upon the table, she sobbed for the hours of sunny happiness that once shed their cheering rays upon her, when her step was light, and her song as mirthful as the notes of the forest birds, or the gentle murmurs of the summer wind.

For a long time she sat there weeping, but at length was aroused by the sound of the door bell. Quickly drying her eyes, she hastened to open it. What was her surprise to see her husband; but what was her joy when she beheld him extend his hand to her, and ask her, in entreating tones—

"Can you forgive me, Kate?"

Ah, how precious were those words. They spoke of regret for the past, amendment for the future. Tears of happiness coursed down her cheek, and, like a timid bird, she nestled her head upon his breast, and wept.

You should have seen them an half-hour after. How happy they looked. Not the false and transient happiness which the goddess of the world's pleasure bestows upon her votaries; but the deep, pure joy, which gushes up—like a fountain springing to catch the sunbeams—from the depth of two loving hearts.

"I should never have thought of returning, Kate, but, as I passed by the window, I noticed that you had neglected to draw the curtains. I peeped in, and there I saw you with your head bowed down, and the bitter tears flowing. Ah, Katie, the greatest criminal upon the earth need not have envied my feelings at that moment. For a few minutes, there was a bitter struggle in my heart, but at last some of the old love came back again, and it conquered. And so, Katie, here I am, your own loving George once again. I have erred, but it is repented of, and for the future, Katie, your face shall be lighted with smiles, and never—never more dimmed with tears."

He kept his word. Kate Vinton is one of the happiest wives in Mountford, and George is "a model husband."

Miss Blackit sighed piteously at Kate's want of spirit, and prophesied that in less than a year they would be separated; but Kate only shakes her head and laughs, for she has in her possession a talisman in which she places great faith, —forbearance and gentle words.

Emma is looked upon as their guardian angel, and the gentle-hearted girl ever finds a warm welcome at their pretty cottage; though it is whispered that a certain young man has offered her the possession of *his*, together with his hand and heart; and rumor also says that she is not very averse to accepting it.

If you should happen to pass through the town of Mountford, and should inquire after Mr. and Mrs. Vinton, you will hear them spoken of as patterns of goodness; for they have never forgotten the lessons of *mutual forbearance* and *mutual forgiveness* which that FIRST QUARREL taught them.—[True Flag.

Blows suspended over the head fall upon the soul.

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,

SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

By EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:

Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

Carriage Bows on hand and made to order.

N. B.—Prices to suit the times v7-1 3m

H. WELLS & CO.,

FLORENCE, New Hampshire Co., Mass.,

ARE at all times prepared to fill orders for any size (single or double) of WELL'S PATENT (Improved) PREMIUM CIRCULAR SAW MILLS, which take the lead of all other mills in market for manufacturing lumber.

Also, MORRISON'S SHINGLE MACHINES, which rive, shave and joint perfectly, sixty shingles per minute.

Self-Setting, Shingle and Lath Sawing Machines, capable of sawing 1,000 shingles per hour, or 4,000 laths per day. Cuts and List of Prices sent by mail when desired. v6-19 3m

The California Farmer.

SAN FRANCISCO, FRIDAY, FEBRUARY 27, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

Bring in Your Wheat

We cannot but note with pleasure the general expression of gladness among all classes of business men, in knowing that the farmers are now receiving good prices for their grain.

Fictitious, unnatural speculations, never result in any good to the community; however often we may see large fortunes acquired by sudden speculations, especially in Bread Stuffs, just so often we see them suddenly disappear—and bring with them a train of disasters very ruinous—while a gradual rise in the value of all agricultural produce, and especially grains, diffuses a general prosperity among all classes in the community.

When speculations are rife it creates an unnatural state of business that cannot last. Every wise and prudent business man sees it, and, instead of looking for an increased business, he is looking for the reaction that he believes must inevitably follow a baseless expansion of a staple commodity—and, instead of inspiring him with confidence in the future, he is filled with distrust. This was the case the last year, when a body of men attempted to raise the value of Bread Stuffs. The history of the past is a lesson for the future.

The present year has placed the community in a totally different light. Last year speculators held the great bulk of wheat—the present year they do not hold quite all! The farmers hold a little grain, and over our State there are parcels still left that will keep the people from starving. The farmers have learned a lesson, by the experience of the past, and they are united in the determination to make the most of their labor, under all circumstances.

At the present time an effort is made, by those who hold quantities of wheat, to advance it beyond its real value, and their object is personal gain, regardless of any fatal consequences that may ensue to our people generally. "Self" is their motto, and self only. Every farmer, every grain grower, should see this, and, forgetful of his own mere personal gain, for the time being, he should join with his brother farmers in these measures which will secure to them always a permanent, well-paying market. This can only be accomplished by a union of all the farmers in all their plans which tend to the general good.

Farmers should watch, with a zealous eye, all efforts that tend to raise the price of grain to a point that will induce the shipment of grain and flour from other countries to our own State. It were better they should not receive quite so high a price for a season, on a part of their crop, than, by a fictitious value, excite competition from abroad.

It should be the aim of the grain grower, rather by a system of better cultivation, to produce a large crop, that may keep down the market to a certain paying price, than to labor to advance it to such a price as would bring in foreign competition. There must be a better understanding among the grain growers of California, of their true position, and of the vast interests they have at stake.

The present year will be one of great moment—already we see the signs of "events that cast their shadows before." The present copious rains all over the State—its influence upon all the products of the country—the increase it will give to these products, and to the yield of gold—all will tend to an expansion of trade, so opposite to its present stagnant condition as to startle people. The present high price of grain and flour, is, even now, inducing many, at this season, to increase the quantity of their grain fields. All these circumstances induce us to the certain belief that farmers should reflect upon their present position, and be as "wise as serpents and as harmless as doves."

We have always labored to secure to the farmer the benefit of all rise in prices of produce, believing that it was their just dues, and for this purpose ever opposed all false speculations in the great staple products of California.

The last year we aimed to secure to the grain growers this benefit, by urging them to hold on to their wheat until about January—and about that time to sell—our word then was, "sell now." Those that regarded this received the benefit, and many a farmer received a generous reward—and we rejoice at the success that accrued to them, for it relieved many from embarrassment, and they are now in a very prosperous condition. The present year, the farmers, in most instances, have been the managers of their crops, and they have managed their own business—managed it wisely too—and have been greatly the gainers.

The recent rise gave evidence that there was still heavy parcels of wheat in first hands. At the first rise to any extent, five thousand bags came suddenly to market, and the speculation lulled. Again it goes up, and four thousand bags come to market in a day, and thus, it will be perceived, that there is still a *few bags* left. We believe now, that we have ample wheat in the country for our own wants—and believe it is in the hands of the farmers, to be brought to market as it is wanted. This is as it should be—the market should not be crowded at one time, neither should it be permitted to run too low. The farmers, themselves, should watch this, and govern themselves in this matter. They can have all the lawful gain if they will, at the same time giving the miller, merchant and trader their due profits in the way of trade. It is the too sudden and repeated fluctuations that cause the ruin—and every merchant can also testify that it has, almost in every instance in California, resulted in ruin to those engaged in it.

It should be the fixed purpose of all the grain growers and grain dealers, of millers, and all interested in this great staple of our country, to look to it with care, and so plan, labor and manage, as to make this market not only independent of all other markets, but to be able to become exporters of this great staple. That this can be done we have no doubt, and we shall try to show, at an early day, that an opening will be had for our wheat crop and other great staples, in all coming years, if we act wisely and judiciously, and prevent those unwise and fictitious speculations that raise our market above what can be long sustained, and open it to our foreign competitors.

We believe, as we have expressed before, that we have a sufficient supply on hand for all the wants of California. We believe, too, that the crop of the present year will far exceed that of any previous year, and that it will be far superior in quality to any ever yet grown, and that we shall be able to show that there will be a market for all we can grow. We say then to farmers, to grain growers, bring your grain to market now, as it is wanted—the present price is a glorious return for your labors. And if you are in debt, sell now and be relieved. We do not believe that the price can advance materially, therefore the present price is worth securing, and your money can be put at interest, bringing in a constantly accumulating fund. Be wise—be prudent—be cautious—and your success is certain.

Home Manufactures.

"Home is where the heart is."

When the citizens of California shall settle the question of Home; when they shall, with one united voice say, "California is my Home;" then we shall see a due regard paid to all those embellishments and comforts which belong to that dearest of all earth's bright places—Home. It is this unsettled, uneasy, wavering, vacillating mind of so many of the people of California that tends to hinder her prosperity, and to retard the developments of her own home industry.

No country in the world can present so many attractive features for a home as California. In no country can a home be made more beautiful with the materials which truly belong to and are identified with the place, either in nature, art or science, as California; and when the heart settles down upon California, then we shall see permanent and beautiful homes. Already we see them springing up all over our State; bursting upon our vision, in their brightness, as the stars peep out from the sky, at eventide. But we want them to be universal: we want them to cover our whole land as thickly as the stars cover the beautiful blue above us.

We were led to these thoughts by seeing a most beautiful marble mantel-piece, made from our own native marble, quarried at Suisun, wrought and finished by Messrs. McCormick, at their workshops on Mission street, and now exhibited at the extensive Furniture Warehouse of George O. Whitney & Co, California street. We are particular in naming the place thus, that all may see this superb specimen of California Home Industry. The quarry from whence this marble is taken is but a few miles from the head of Suisun creek, in the valley of Suisun. It is of a peculiar variety, presenting numerous and diversified grainings—some, like bird'seye maple, others of oak, and, again, all the other changes found in the richest features of agates, or Italian marble. It should be called the agate-grained marble of California. It is susceptible of the highest polish, and we hope it will be brought into use extensively. This sample mantel-piece, we learn, is ordered for one of the government houses, at Mare Island, and we are pleased to know that this is the case. We believe that it is the duty of every government, to labor to encourage, foster and bring out the rich resources of a State, as a parent would strive to reveal the intelligence, worth and affections of a child.

We believe this marble quarry will be of inestimable benefit to our State; not only giving us the means to beautify our homes, but to give a new stimulus to our workmen.

Messrs. Fay & Willis, we learn, have the control of the quarries, or are acting for their extensive development. We hope those who are building homes will prefer California manufactures in their embellishments; and while they admire this superb piece of mantel work, urge our friends, the Messrs. Whitney, who have so large a warehouse of furniture, to see if *they* cannot *manufacture* furniture *here*, and save the large amount of gold that goes abroad for what should be made here.

Subsoil Plowing.

In our present issue we show the Subsoil Plow, and the Side-Hill Plow. Both implements are of great value to a California farmer, but as yet but little used.

The Subsoil Plow is beginning to be appreciated by our orchardists and vegetable growers. There are several orchards and gardens where, in former years, large sums were expended for irrigation, and now not a dollar is spent, or a gallon of water used. The Subsoil Plow has accomplished more than irrigation. Orchards are more flourishing—crops are larger, and work is done at less cost. Innumerable instances can be shown of success in this matter. The columns of the Farmer, during the past year, have given facts enough to satisfy any one of the great benefit of subsoiling and deep plowing, in a country like California, to admit of a doubt of its utility and its necessity.

The cut of the Subsoil Plow represents its general features and uses. It is one of the best patterns, and is from one of the best agricultural warehouses in the United States—Messrs. Ruggles, Nourse & Mason, of Boston, Mass. These plows can be obtained of Messrs. Treadwell & Co., of San Francisco, or their branch house at Marysville, and of other houses, and every cultivator, to any extent, should use them.

The Side-Hill Plow, as represented in the cut, is specified as a good road plow. It is all this, and more—it is invaluable to California, for the use it was expressly made for—hillside plowing. Although, as yet, but little attention has been given to the improvement of our hillsides, the time will soon come when orchards, vineyards and grain fields will occupy our beautiful hills and slopes, for some of the most fertile and luxurious soil is found there, and ere long the Side-Hill Plow will be called into requisition, and these now waste places be made fertile and beautiful. We earnestly commend both these plows to the consideration of those who have tracts of land that now lay waste and unprofitable, which might be made sources of large income.

Report of Committee on State Prison Labor.

Hall of the Mechanics' Institute,
San Francisco, February 25, 1857.

Your Committee, appointed to take into consideration the subject of State Prison labor as coming in competition with honest labor of this State, and, also, to examine and report upon a Circular on the same subject, entitled "The State Prison System of California," beg leave to submit the following report:

Your Committee, after availing themselves of all the information which they could obtain on the subject, are of the opinion that the present system of farming out the prison labor, and allowing the Lessee to pursue, by the use of that labor, all the different mechanical branches, in competition with honest labor, is fraught with evils of the most serious character, and, if continued, will seriously affect the prosperity of the State, by preventing the immigration of that most useful class of citizens, the mechanic and laborer, and be ruinous to all mechanical pursuits in the State.

Your Committee have examined the Circular above alluded to, and most heartily indorse the sentiments therein contained. The writer has not only shown the evil effects of the present system, but has given some excellent ideas and valuable suggestions, by which that labor may be employed to advantage by the State, without injury to private individuals. He has more forcibly shown the evil of the present system, by a comparison with twenty-two of the Atlantic States, which shows that, by judicious management, the prison labor may be made a source of revenue to the State, instead of paying the enormous sum of one hundred and twenty thousand dollars a year, to support a system by which the honest mechanic is deprived of the labor to which he is legitimately entitled.

Your Committee would recommend the following means, by which the evils of the present system may be remedied:

First, that the Mechanics' Institute send a Memorial to the Legislature, praying for a change of this system.

And secondly, that the Institute make a general call for a meeting, in this city, of all interested: and at such meeting make arrangements for issuing a Circular calculated to create a general interest throughout the State, which should be accompanied by petitions for signatures, praying that the present system be abolished, and that the State have control of the convicts who shall be managed by a Superintendent, who shall direct their labor to such branches of industry as will not interfere with any branch that can practically be prosecuted with honest labor.

Your Committee, believing this subject to be within the province of this Institute, would earnestly recommend that the most active measures be taken by which a reform may speedily be brought about; and show by our acts that we are truly the friends and defenders of the laboring class, and that the Mechanics' Institute is willing to lead the van in any reform—whose object is to defend and protect the Mechanic, and sustain the dignity of labor.

All of which is respectfully submitted.

G. D. Street,
D. Van Pelt,
Jas. A. Banks.

Adopted by the Board of Directors, February 25, 1857, and ordered published, with a request that all the Papers throughout the State, favorable to the change recommended, copy the same, with a request that all the Mechanics in the State, interested in the subject matter, will take immediate action on the same.

Agricola's Criticisms.

Our readers will find a rather sharp review of the State Agricultural Society's Reports, or, rather, the doings of the State Society by its government the past year. The source from whence this criticism emanates—a writer like Agricola; one of long experience in agricultural matters, and one particularly and thoroughly versed in the science and practical uses of agriculture—claims from us the use of our columns and we cannot deny them, however much we may differ with him upon the matters which he handles so severely.

It will be remembered by our readers that the State Agricultural Society advertised *special premiums* for Essays upon given subjects. Agricola was the only competitor. These essays have all been published in the Farmer, and our readers can judge of their merits. We feel sure they have been spoken of in the highest terms both here and abroad. One of these essays received the award, the other two were rejected. At this Agricola feels aggrieved, and as he is one of our most esteemed correspondents, and highly appreciated by our readers, we feel it a duty to give him an opportunity to make his appeal, and to criticise freely the action of any public corporation that have published their doings through our journal.

If Agricola has been too severe, or unjust in any degree, our journal is open for a reply. For ourselves, we are free to confess that we differ entirely from Agricola in his opinions relative to "Equestrianism of Ladies." We approve of public performances by ladies, believing it conduces to a better state of society, as well as health. We differ with Agricola in other of his criticisms, yet we cannot in justice refuse his communication, and in publishing his letter we offer an opportunity to those of whom he has spoken to make reply, and trust all error and wrong may be corrected and pass away.

Valuable Donations of Books, &c.—We are under many obligations to Hon. C. Mason, of the Patent Office, for the valuable reports sent us last mail.

To Hon. J. B. Weller, also, for like favors.

To Messrs. Blackie & Son we are much indebted for the following valuable works: Engineer and Machinist's Assistant, Clark's Railway Machinery, Cabinet-Maker's Assistant, Engineer and Machinist's Drawing Book, Imperial Gazetteer, Italy Illustrated, Burns' Complete Works, illustrated. If the above seven works are a style of the works published or sold by this house, they are evidences of their high merit.

We received recently an invoice of beautiful books purchased of Messrs. Blackie & Son, containing a selection which we think was hardly ever excelled. It consisted of Rhind's Vegetable Kingdom, and Goldsmith's Animated Nature, both illustrated with rich plates and colored engravings—the latter having twenty-four hundred plates, large octavo volumes. Messrs. Blackie & Son are a house to whom persons wanting valuable works can send with confidence.

Special Favors Received.—Among the many acts of kindness we so often receive from our friends, we shall ever feel true gratitude to those who generously make exertions to extend the circulation of our journal. Such favors do us a double good, for it cheers us on in our labors to know we have many friends that appreciate our efforts—and it also enables us to do more, and make our paper still more worthy such acts of kindness. The past week, many kind favors of this kind have been registered in our heart. Our very kind friend from Mariposa has placed us under many obligations for his generous list of friends sent in.

MSS. Copy Received.—We welcome to our columns our spirited and happy "Clara Wildwood"—she will grace our ladies' department next week. Mabel will be most welcome again. E. M. S. also—her subjects are always good. Eva, too, our new friend, shall always be hailed with pleasure. We see a kind providence in sending us two new friends. They come, as Cupid steals away Katie King and Jennie. But may we not hope, that though Cupid changes the names of our former esteemed correspondents, that they may still sing over the same or some other name?

Furniture.—We would call especial attention to the card of the "Empire Furniture Warehouse," on Washington street. The "Empire" is one of the long established houses, and has always maintained a high reputation for the very best stock of finished furniture. It is only necessary for us to point to the advertisement, to insure to this establishment a liberal patronage.

Hutchings' California Magazine.—The March number of this sprightly monthly comes to us with still increased attractions. By the excellent articles and beautiful illustrations for which this periodical is celebrated, it has made itself a welcome visitor to all.

Deferred Articles.—We regret that we are obliged to defer a sketch of the extensive Iron Foundry, of Peter Donahue, and a sketch of Smith's Pomological Gardens, Sacramento, also several valuable letters received, that we cannot note till our next issue.

The Turf.—The Liverpool Times, of January 10th, says: "Mr. Bell, of the Liverpool Adelphia Stables, has, during the week, forwarded to America a pure, thoroughbred Arabian mare for R. Richards, Esq., a most extensive breeder in Louisiana. The mare was bred in the Great Desert of Sahara, and purchased from the chief of a tribe of Arabs by E. Troye, Esq., the celebrated artist, so well known in America. For his judicious care and attention in shipping this valuable animal, Mr. Troye, who has had great experience in the transference of horses and cattle by sea, and knows its difficulty, has written a letter of thanks to Mr. Bell.

The Amount of Tobacco on the Globe.—The present annual production of tobacco has been estimated by an English writer at 4,000,000,000 pounds! This is smoked, chewed and snuffed. Suppose it all made into cigars, one hundred to the pound, it would produce 400,000,000,000. Four hundred billions of cigars! Allowing this tobbacco, unmanufactured, to cost on the average, ten cents a pound, and we have $400,000,000 expended every year, in producing a noxious, deleterious weed. At least one and a half times as much more is required to manufacture it into a marketable form, and dispose of it to the consumer. If this be so, then the human family expend, *every year*, one thousand millions of dollars in the gratification of an acquired habit, or one dollar for every man, woman and child upon the earth!

Holloway's Ointment and Pills.—Astonishingly efficacious in the cure of Salt Rheum, Scrofula, and all other skin diseases; they will effect cures when all other means fail. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot or box.

Pardoned.—The Governor has pardoned Stonecifer, convicted of the murder of Richardson, in Sacramento. The pardon was unconditional, it having been represented that the deed was done in self-defense.

The use of the Assembly Chamber has been given to the ladies of Sacramento for Friday evening, March 6th, for the purpose of holding a calico party in aid of the Public School Fund.

Notes for our Friends at Panama and Elsewhere.

It is our intention to place copies of our journal, on each trip of the steamers, in the hands of suitable agents, at Panama, for *free distribution*. The object of such a distribution will be to make known some of the bright features of our Pacific homes, so that all new comers, as well as old Californians, shall have a copy on their arrival to greet them.

In these copies we shall give them a brief sketch of some of the principal hotels, where they can find a home when they arrive, and such other prominent furnishing stores and places of interest, which will be of much advantage to them—and besides, we wish they should know, however dark the pictures others may give of California, there is still a bright side, and that is, the *country*—is safe.

Strangers, and all who come to our Pacific shores, will find the following notices reliable, and they can be sure of finding a home, and all the necessary comforts, at either of the following Hotels.

The Oriental.

This long known and well established Hotel, which has withstood the raging element so many times, stands as a monument of former days, and it is a Hotel where thousands of our citizens have spent many happy hours. Although fire has not changed it for another form, it has lately changed in proprietorship, and we find names now floating upon the flag of favor that are familiarly and kindly remembered by many thousands. Geo. E. Watriss, Esq., formerly of the St. Charles Hotel, New Orleans, and of the Astor House, New York, and Samuel Loring, Esq., formerly of the Tremont House, Boston, are now proprietors, and their names will recall pleasant memories, and lead their old friends to them, when they come to our shores, and they will find the Oriental Hotel, of San Francisco, will afford them as much oriental luxury as they need. The proprietors, Messrs. Watriss and Loring, will be happy to see their friends at all times.

The Rassette House.

This celebrated House is now one of the corner stones of the great mass that makes the "Commercial Emporium" of the Pacific coast. The Rassette House stands out among the Hotels of the Pacific, as prominently as the mountain shows among the hills of the plain. Joseph Rassette is a familiar name with the great traveling public, and the parlors, reading-rooms, and halls of the Rassette will show that citizens of all parts congregate there. Mr. Rassette has passed through many trials. His great Hotel was consumed by fire, but a greater one arose from the ashes. He has had, like old '49 laborers, great trials, but he is able to endure greater, and now we see that, by energy and perseverance, he has established a Hotel that is most favorably known the world over.

One of the very favorable features of the Rassette, is, that it is a "social home" for a family; the large parlors are always enlivened with the many families that have made it their home. And great praise is due to the many ladies that reside there for the social and intellectual enjoyment which their agreeable presence always furnishes to those that are the long and permanent inmates of this popular Hotel. Strangers visiting the Pacific, and all who seek a home, will find that Mr. and Mrs. Rassette will render them every attention, and strive to make them happy.

The International Hotel.

This Hotel, since the new opening under the auspices of Mr. and Mrs. Haley (so long known at the Railroad House), and since the remodeling and refurnishing of the Hotel, has become quite a popular place of resort, both for strangers from abroad and for travelers of our cities. The International, like its compeers, can tender to its patrons all the comfort and luxuries of a bounteous table, good rooms and spacious parlors, agreeable and entertaining boarders, and most kind and attentive host and hostess. We speak from knowledge when we say, no proprietors can labor with greater effort to please all who call at this Hotel, than Mr. and Mrs. Haley and those who belong to each and every department.

The What Cheer House.

This overflowing Hotel is indeed the great storehouse of the traveling people, and it is but the plain truth when we say, there is no other establishment on the whole Pacific shores that is so constantly crowded, and so often stowed as full, as the What Cheer House.

Woodward has a peculiar way of keeping a full house—and he has such a house, it is like a great museum. The What Cheer is like a great castle, and it is a safe one, too, for although you may see five hundred persons there, they all find good rooms. Everything good to eat, fine beds, and plenty of amusement. Woodward's What Cheer, however, we notice is particularly intended as a hotel for single men—for the masses—and is not intended so much for families, although there is room enough for all. The What Cheer is a famous house.

Refreshing.

Besides the hotels of the Pacific coast, strangers coming to our shores, and tarrying but a little, sometimes need some "delicacy," some "bon bon," or some luxury. Being strangers with us, we shall point out to them such places as are worthy of notice.

A gentleman of family, or even single, has only to call at "Jobs" on Washington street, and tea, coffee, a mutton chop, a broiled chicken, or ice creams and other delicacies, will be found equal to any that our friends on the Atlantic side can boast of.

Besides Job's fine saloon, we can point to "Winn's," a name that has been connected with weddings and festivals until it has become a synonymous term.

The epicure who loves a "rare bit", an oyster in the shell, or other dainty, will please call at Dan's Oyster Saloon. "A word to the wise."

The Best and Cheapest Durable Fence. The value of the Osage Orange for a Hedge, is universally acknowledged, as it makes the most perfect and durable fence known, not only against the largest animals, but as has been remarked, can be made nearly "rat proof." As this plant is peculiarly adapted to California, where some kind of a hedge fence is very desirable in consequence of the scarcity of timber on our prairies, we know Farmers will advance their own interests if they take notice of the advertisement of Osage Orange Plants, in this paper, and send a liberal order to Mr. Paul for them. We are confident they will never regret it, but will acknowledge the justice of our remarks. A word to the wise, &c.

A Card.

☞ The Report of the Agricultural Society, for the year 1856, including the full Reports of the Visiting Committees to the Farms and Vineyards throughout the State, Reports on the Exhibition, the Annual Address of the President, Address of Col. J. B. Crockett, detailed list of the Exhibited Articles, the Prize Essay on the Potato, with other important matter, is now issued in a neat Pamphlet of about eighty pages, illustrated. Persons desirous of obtaining copies will please address the Office of the California Farmer, when copies will be forwarded as per order. Price Fifty Cents.

For sale at the Offices of the California Farmer, State Agricultural Society's Rooms, Sacramento—and at No. 130 Washington street, San Francisco. Also, at Ullman & Co.'s, J. W. Sullivan's, J. J. LeCount's, San Francisco; Dr. J. C. Cobb, and J. B. Manny, San Jose.

☞ Newspaper Route for Sale.—We can offer a good Route for the city of San Francisco, and one for Sacramento, to one who has the taste for making known our journal. A very profitable route can be thus secured to active and experienced men.

From the East.

The Nicaragua steamer Orizaba, Capt. J. H. Blethen, arrived yesterday evening, from Panama, and San Juan del Sud; bringing dates from New York to 29th January, New Orleans 28th, Liverpool Jan. 14th, and from the city of Mexico January 29th.

Mr. Buchanan has arrived at Washington. The N. Y. Herald says he visited the President to say that he would take all the servants, etc., at the White House, till he could make other arrangements. It is usual for the President to vacate the Presidential Mansion a few days before the inauguration. Mr. Buchanan has requested Mr. Pierce to remain in the house till after the inauguration, and then remain his guest till he desires to leave for New Hampshire. To this graceful invitation Mr. Pierce has acceeded.

The Cabinet appointments are as much a matter of conjecture as ever.

The Submarine Telegraph bill was before the House, and it was thought an effort would be made to pass it under a suspension of the rules. A sample of the cable is on view at the National Hotel, and attracts a good deal of attention.

The amended tariff bill was reported to the House, on the 17th January. The direct reduction of the revenues annually, will be about $13,000,000, which, it is supposed, will be increased some millions by the effects of the measure, in substituting home manufactures for those imported.

Preston S. Brooks, of South Carolina, died in Washington, of the croup, on the 27th ult. He leaves a wife and four children.

Both Houses of Congress adjourned on the 28th, in consequence of the death of Mr. Brooks. The body was to be removed on the 29th, to his late residence in South Carolina.

The estimable and venerable widow of the late William Wirt, died at Annapolis, Maryland, on the 24th. Her remains were interred by the side of those of her illustrious husband, in the Congressional burying ground.

The Bostonians cut a channel in the ice to permit the steamer America to sail on the 27th January, but as she could not turn around without jeopardizing her rudder she did not sail.

The United States Agricultural Society, before its adjournment, decided to hold the next annual fair at Louisville, Ky., in September next. The programme of arrangements will soon be issued.

The Military Wagon Road Bill, from Missouri to California, it is now thought, will pass this session.

Snow was falling rapidly at Washington, on the 28th ult. The weather was mild.

The N.Y. News of the 28th, says that all the mails are deranged. They come in floods, or come not at all. There are no less than eight mails due from New Orleans.

Travel between New York and Washington, which had been interrupted by the snow storms, was resumed on the 22d ult.

A bill has passed the House of Representatives to increase the pay of Army officers.

J. W. Faber, Republican, has been elected Speaker of the Minnesota Legislature.

The disease known as the "hog cholera," which has been so fatal in the West, is said to have made it appearance in Massachusetts, and to be quite fatal there.

It is stated that Gen. Harney has withdrawn his flag of truce, and declared war against the Florida Indians, Billy Bowlegs included.

There was a meeting in favor of Walker, at New Orleans, on the 20th ult., at which $1,700 was subscribed to his aid.

The New York papers continue to give accounts of shipwrecks and disasters, in consequence of the late severe storms. The crews of several vessels wrecked on the coast, had been rescued. Many were so severely bitten by the frost that their lives were in danger. The telegraphic communication between New York and Sandy Hook was resumed on the 28th ult.

Kansas.—The St. Louis Republican, of the 20th of January, published an advance copy of Governor Geary's Message. His views on squatter sovereignty are embodied in the following words:

"When the interests of the people shall require a State government, and a direct popular vote is necessary to give it sanction and effect, will be the proper occasion, once for all, to decide the grave political question which underlies all well regulated commonwealths."

He advises the Legislature to let slavery alone, where the constitution places it, and forego legislation in reference to it until a State constitution is formed; recommends that errors and omissions in the statute book be corrected; denounces the test oath act, and recommends its repeal; disapproves of the present mode of collecting jurors, and recommends their election by lot; thinks that the adoption of the ballot plan of voting should be insisted on, and suggests the enactment of a law requiring a residence in the Territory of ten days, to prevent illegal voting.

A telegraphic dispatch, dated St. Louis, January 23, states that the Territorial Convention, at Lecompton, Kansas, adjourned on the 14th of January, after passing resolutions embodying the views of the principles of the party hereafter to be called the "National Democratic Party." Both branches of the Kansas Legislature repudiate that portion of Governor Geary's Message relating to the repeal of obnoxious enactments.

From Europe.—The news from Europe is to the 14th January, brought by the steamer Arago, which arrived at New York, 28th ult.

The Neuchatel question may be regarded as settled. England and France have proposed terms to the Federal Council, which that body considers acceptable. The envoys of Switzerland have also come to an understanding with the French government. Switzerland will set at liberty the prisoners on the assurance of the two mediating Powers, that Prussia will acknowledge the independence of Neuchatel, and at once put a stop to all military preparations.

By telegraph via Trieste news had been received in England of a great battle near Bayuk, between the Russians and Circassians. The former retreated, with a loss of nearly 2,000 men and several guns, the attack being made by a Circassian corps of 10,000 strong.

A hurricane was experienced at Malta, on the 4th of January, during which some ships sunk, and three hundred boats were dashed to pieces against the quays.

A late number of the Journal Pratique d'Agriculture, states, that for the first time during the last three years, it is able to announce that there has been a fall in all the corn markets of France.

The French Government has not resolved to abandon the occupation of Tahiti.

A horrible tragedy was enacted in Paris, on the evening of 3d January, when the Archbishop of Paris was assassinated while performing religious services in the Church St. Etienne, by a discharged priest named Verges. The assassin stepped forward, and lifting the prelate's cape, plunged a Cataline knife into his heart, exclaiming, "Down with the Goddess!" an expression which he afterwards explained referred to the doctrine of the immaculate conception. The Bishop fell to the pavement and instantly expired. The general opinion is that Verges is deranged. The funeral of the Archbishop took place in the cathedral of the Notre Dame, with great pomp, amidst throngs of people. The trial of the assassin was expected to take place about the 25th.

Lord Napier has been appointed by the British Government Minister to Washington. It is stated he is a practical diplomatist, having served in Austria, Persia, Naples and Turkey. The London Times objects to the appointment of Lord Napier, on the ground that, though well fitted by his diplomatic experience to represent his country in the East, or at any of the despotic and Military Courts of Continental Europe, he is not the right man to send to Washington.

Mexico.—The Mexican Extraordinary, of Jan. 27th, says: The evacuation of Lower California by Gen. Blancarte and forces has given rise to reports of a serious character. It was said he had pronounced at Tepic for Religion y Fueros and for Santa Ana. This is undoubtedly without foundation. We learn, from good authority, that Gen. Blancarte deserted Lower California for the reason that he was unable to sustain himself longer without supplies. A gentleman, who says he has a letter from him, informs us that Blancarte is fully impressed with the idea that Lower California will soon fall under the ban of some American expedition. He says, already the Mexican population are anxious for such an advent. Most of the large landed proprietors are now in Upper California, endeavoring to sell their lands to Americans.

There are various reports in town of more recent engagements than are noticed in our news of to-day, between the government troops and the pronunciados. As yet nothing definite has been received from the direction of San Luis.

A rumor is now current on the streets that a loan is being negotiated with the United States. Although the business is as yet enshrouded in diplomatic mystery, we have no doubt, when once developed, it will appear that Mexico will be placed independent of her present depressed financial condition. There is need of it, and for her sake we sincerely hope that something may be speedily done.

A Spaniard was murdered at Paducca on the 19th January by robbers. On the 19th instant, a band of robbers attacked the town of Nochistlan, in the Department of Tepescolula. They broke open the doors of the prison and liberated more than fifty criminals, and at the cries of "Religion y Fueros," sacked the commercial houses and wounded the sub-prefect. After two hours of disorder they abandoned the town, and then the prefect, with some of the citizens, actively pursued them and managed to catch the head man, Don Manuel Dolores Rodriguez. The people of the small town of Xnastla, have taken twenty-four of the same band.

The band that was headed by the priests, Amezquita and Fuentes, have been hotly pursued by the troops at Guanajuato, and ten of the rebels have been taken. The priests and their soldiers have pillaged the Mineral de Santa Ana.

Gen. Moreno, recently appointed Governor and Commandante-General of Tamaulipas, has left for Tampico. Don Ignacio Munoz Cambuzano accompanies him in the capacity of Secretary. Eight hundred troops have also been directed to the same destination; the active battalion of Mexico forms a portion of this force.

MARRIED.

A neat, white envelope, bearing our address, inclosed a very pretty card, which we read thus—

Mr. and Mrs. E. A. Shephard.

In one corner of the card we also read, A. Nettie Westerhaven, and we must construe it thus: our friend E. A. Shephard (of the firm of Beach & Shephard, nurserymen and florists of the New England Nursery, near Marysville), has entered into a new partnership. He has sought a "Western Haven," and his new partner has found a "Shepherd."

A gentle shepherd we know our friend will prove, and will dearly prize the lamb he has taken to his fold. May happiness attend the new firm. May the young plants that may be reared in the nursery be carefully trained, and the flock that shall be confided to the shepherd be gently cared for and watched over. Much happiness we wish our friends, and while we may regret that this same shepherd has come and stolen away the fair "Jennie" from the Farmer's flock, we would fain hope we may still hear an occasional song from the warbler on the banks of the Plumas.

Osage Orange for Hedge.

A FEW THOUSAND strong, healthy PLANTS, three years old. For sale low, if applied for soon.

Address to WM. PAUL,

State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

A PERFUMED BREATH

What lady or gentleman would remain under the curse of a disagreeable breath, when by using the "Balm of a Thousand Flowers" as a dentifrice would not only render it sweet, but leave the teeth white as alabaster? Many persons do not know their breath is bad, and the subject is so delicate their friends will never mention it. Pour a single drop of the "Balm" on your tooth-brush, and wash the teeth night and morning. A fifty cent bottle will last a year.

A Beautiful Complexion may easily be acquired by using the "Balm of a Thousand Flowers." It will remove tan, pimples and freckles from the skin, leaving it of a soft and roseate hue. Wet a towel, pour on two or three drops, and wash the face night and morning.

Shaving Made Easy.—Wet your shaving-brush in either warm or cold water, pour on two or three drops of "Balsam of a Thousand Flowers," rub the beard well and it will make a beautiful soft lather much facilitating the operation of shaving. Price only Fifty Cents.

W. P. FETRIDGE & CO.,

ORDERS for all kinds of Farming Implements, Mill Machinery, Bolting Cloths, Screen Wire, &c., &c., promptly filled by
v7-6 2m BRYANT & CO., 68 Battery street.

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that wherever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain* means by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a certain provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance present s habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,346 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

NORTHERN ASSURANCE COMPANY,
For Fire and Life Assurance at Home and Abroad.
Established in 1836—Incorporated by Act of Parliament.
Capital £1,250,760 Sterling.

Annual premium for an assurance of $100 on a single life:

Ladies' Department.

POOR LITTLE NELLY.

BY C. CHAUNCEY BURR.

Poor little Nelly's gone to sleep—
She left no mother here to weep.

She used to sit beside the gate,
Selling her apples very late.

Early she dared not go, though cold—
She said her "father's wife" would scold.

Must earn "five shillings" every day,
Else on the hearth all night she lay.

She never laughed and never cried,
After the day her mother died.

Patient, and cold, and without play,
She sold her apples all the day.

She had no mother here, to weep,
And now poor Nelly's gone to sleep.

Good Puddings.

A good Pudding is a real luxury, and it is a matter of great moment that "good pudding" should be more common; we therefore give a chapter on Puddings, from the Home Magazine:

A CHAPTER ON PUDDINGS.

Potato Pudding.—To two pounds of white potatoes, boiled and mashed smooth, and one-half pound of butter; the yelk of eight eggs, and the whites of three; one-half pound of sugar, two gills of cream. Bake in deep dishes, with a rich puff paste and rather a thick edging. Some persons put in one-half pound of dried currants.

Potato Pudding.—One pound of potatoes, one gill of wine, one gill of cream, seven eggs, the juice and peel of two lemons, one-quarter pound of butter—sugar to your taste. Strew over the top an ounce of citron, shred fine.

Potato Pudding, eaten hot.—One pound of sifted potato, one-half pound of butter, one-half pound of sugar, ten eggs, one glass of wine, one of rose water. Put no paste round the dish, and bake in one hour. Serve it with cold sauce.

Baked Almond Pudding.—Blanch one-half pound of almonds, beat them smooth in a mortar; one spoonful rose water; one of cream or milk, thickened with one large spoonful of pounded biscuit; one-half pound of sugar; seven eggs, and one nutmeg.

Boiled Almond Pudding.—Blanch one pound of almonds; beat them in a mortar to a smooth paste, with three tea-spoonsful of rose water. Add one gill of wine, one pint of cream, one gill of milk, one egg, one spoonful of flour. Boil one-half hour.

Sago Pudding.—Wash half a pound of sage in three or four waters; put it into one quart of milk. Boil these together till thick, stirring it carefully. Stir in, when hot, one half pound of butter; when cold, add eight eggs, beaten well; four spoonsful of wine; two of rose water; and sweeten to your taste. Bake this in paste, or not, as you like.

Boiled Bread Pudding.—Grate half a pound of stale bread, pour over it a pint of hot milk, and leave the mixture to soak for an hour in a covered basin; then beat it up with the yelks of two eggs. Put the whole into a covered basin just large enough to hold it, which must be tied in a cloth and placed in boiling water for half an hour.

Boiled Flour and Milk.—Knead any quantity of wheaten flour with water into a ball, and tie the whole firmly in a linen cloth; put it into a pan with water, and boil it slowly for twelve hours. Place it before the fire to dry, and afterwards, on removing the cloth, separate a thin skin or rind which has formed, and again dry the ball.

A table-spoonful or more of this, grated and boiled with a pint of milk, forms an excellent article of diet in convalescence from diarrhea. It also makes very suitable food for young children.

USEFUL HINTS TO HOUSEKEEPERS.—Never suffer your rooms to be littered, but keep your tables and chairs in their proper places.

Rub your own tables, if you wish to be warm all day.

Take the tradesman's receipt, though you pay in ready money.

Look now and then into your kitchen and larder, and always know what is for dinner.

Be regular in keeping your accounts. It will secure your husband's esteem.

Never enter an auction room, for there you will be tempted to buy what you do not want.

Keep no more servants than you can employ.

Never pay a tradesman's bill till you have cast it up.

If you have a family, and not very affluent, remember that a pin a day is a groat a year.

If you keep a drunken servant, insure your house against fire, and yourself against the censures of your neighbors.

If you are rich, be liberal in your expenses.

Waste not; want not; is a good motto for a kitchen.

When you sit down to a luxurious banquet, consider how many persons there are in the world who would be glad of the crumbs that fall from your table.

In the morning, think on what you are to do in the day; and at night, think on what you have done.

Do not leave that to be done to-morrow, that conveniently may be done to-day.

A "MILEY WAY" AT SEA.—A lady on her voyage to Calcutta, writes as follows:

"When in the Gulf of Aden, we saw a very remarkable sight. It was a rough and blowy evening that we were called on deck to see the 'milky water,' which is only seen just in this region. It is still undecided whether the effect is produced by electricity, by atmospheric causes, or by animalculæ. Instead of water, it seems as if the vessel were plunging through great drifts of snow. The appearance extended even to the horizon, and if the air had been colder, and I could have caught the sound of sleigh-bells, I should have lost all idea of the sea, and imagined myself enjoying a magnificent sleigh-ride. It was a splendid sight, and it is very remarkable that no chemical analysis can detect any peculiarity in the composition of the water; and as soon as daylight or moonlight comes, it vanishes. The milky way lasted for three nights, and then suddenly stopped, and every evening afterward the water was as usual."—[N. Y. Observer.

TO CLEAN WALL PAPER.—Soiled wall papers may be made to look as well almost as new, in most cases, by the following expedient:—Take about two quarts of wheat bran, tie it up in a bundle in coarse flannel, and rub it over the paper. It will cleanse the whole paper of all description of dirt and spots, better than any other means that can be used. Some use bread, but dry bran is better.

A Tribute to Science.

WILL it not be pardoned if one who for thirty years has been almost constantly engaged in the examination of nature should bear testimony, from his own experience, to the charms and pleasures of science? I know it would be vanity for me to pretend to a profound acquaintance with science, or to distinction in it. But I cannot feel that it is vanity to profess a strong attachment to it. Indeed, how ungrateful in me not to recommend with enthusiasm that which has spread before me so many and such delightful prospects along the path of life; which has furnished a delightful retreat from the agitations and vexations of the world: which has thrown so many gleams of light into the darkest part of my path; which has led me to many a clear and sparkling fountain, and permitted me to breathe an atmosphere of purity and happiness! Often have I known the time, when, through feeble health, the languid eye looked out with indifference, if not absolute disgust, upon all the ordinary objects of life; but never has a view of nature, dressed in the garb of science, failed to rally back the sinking powers, relume the leaden eye, and diffuse animation and joy through the soul. A distinguished writer of fiction and false philosophy, in chagrin and disgust, expressed a regret that he had ever been born. But leaving every thing else out of the account, I can bless the day in which I was born, because I have enjoyed so much in studying the works of nature. And when I see so many noble-minded youths placing all their hopes of earthly happiness, some in the hot strife after political distinction, some in the possession of wealth, equipage and power, some in following the tasteless round of fashionable amusements, and above all, when I see some whose chief source of happiness lies in a devoted attachment to fictitious literature, how gladly would I win them into those fields of science, at which we have this evening glanced, and thus save them from the disappointment and disgust which I know they will ere long experience, and which may lead them also to lament that they were ever born!

Many, many are the bright eyes that are turned upon me at this moment; eyes sparkling with health and hope. Must any of these be palsied by the withering touch of such disappointment? O, if their possessors will not place their hopes of happiness in factitious and natural pursuits, but in a knowledge and a love of nature, they will have a refuge amid all the storms and fluctuations of life, and those eyes may be bright and sparkling even amid the frosts of age.

"O, how canst thou renounce the boundless store
Of charms which Nature to her votary yields?—
The warbling woodland, the resounding shore,
The pomp of groves, and garniture of fields;
All that the genial ray of morning gilds,
And all the echoes of the song of even;
All that the mountain's sheltering bosom shields,
And all the dread magnificence of heaven:—
O, how canst thou renounce and hope to be forgiven?"

I would not undervalue other sources of happiness, which are mercifully provided for us in this world. I only wish to know that the pursuit of science, as a means of happiness, has strong claims upon the attention; that it does not interfere with any other innocent enjoyment; that it is able effectually to overcome the appetite for artificial excitement and dissipation which makes so many miserable; that it furnishes in youth a rich fund of happiness; to the man in middle life, a delightful relaxation from business and professional duties; and that, unlike most other sources of enjoyment, the relish for it grows stronger by age, so that in advanced life, when the common objects of life ceases to interest, those of science still possess the charm of novelty.

Let me not, however, be understood to imply that there are not pursuits and pleasures of a more noble and satisfying character than even those of science. I would not bring them into competition with the result of active benevolence and piety. But the two pursuits are not inconsistent with each other; and he who chooses can make the pleasures of both his own. Such a man has reached the highest point of earthly happiness. For every wonder of science now becomes invested with the double interest of being beautiful in itself and an exhibition of divine wisdom. And then, what delightful anticipations crowd upon his mind! He soon learns that even the veteran in conscience can obtain but little more than a glimpse of nature in this world, and that much cloud and darkness rest upon the brightest spots. Yet he knows that the works of the Deity will form objects of study in a future state, where nothing intercepts the pure rays of truth, and that those works are vast enough to fill and feast the soul through the round of eternal ages. Such hopes as these constitute the true nobility of man:—

"For how great
To mingle interests, converse, amities,
With all the sons of reason scattered wide
Through habitable space, wherever born!
To call heaven's rich, unfathomable mines
Our own! To rise in science as in bliss!
To read creation, read its mighty plan,
In the bare bosom of the Deity!
In an eternity, what scenes shall strike!
Adventures thicken! novelties surprise!
What webs of wonder shall unravel there!
What full day pour on all the paths of heaven,
And light th' Almighty's footsteps in the deep!"

—[From Lectures by Prof. Hitchcock.

KEEP THE MOUTH SHUT DURING COLD WEATHER.—Dr. Hall advises every person who goes out into the open air from a warm apartment, to keep the mouth shut while walking or riding. He says—"Before you leave the room, bundle up well your gloves, cloak and comforter; shut your mouth before you open the street door, and keep it resolutely closed until you have walked briskly for some ten minutes; then, if you keep on walking or have reached your home, you may talk as much as you please. Not so doing, many a heart once happy and young now lies in the churchyard, that might have been young and happy still. But how? If you keep your mouth closed and walk rapidly, the air can only reach the lungs by a circuit of the nose and head, and becomes warmed before reaching the lungs, thus causing no derangement; but if you converse, large draughts of cold air dash directly upon the lungs, chilling the whole frame almost instantly. The brisk walking throws the blood to the surface of the body, thus keeping up a vigorous circulation, making a cold impossible, if you don't get into a cold bed too quickly after you get home. Neglect of these precautions brings sickness and premature death to multitudes every year.

REVENGE.—The noblest revenge we can take upon our enemies is to do them a kindness, for to return malice for malice, and injury, will afford but a temporary gratification to our evil passions, and our enemies will only be rendered the more bitter against us. But, to take the first opportunity of showing them how superior we are to them, by doing them a kindness, or by rendering them a service, the sting of reproach will enter deeply in their soul; and, while unto us it will be a noble retaliation, our triumph will not unfrequently be rendered complete, not only by blotting out the malice that had otherwise stood against us, but by bringing repentant hearts to offer themselves at the shrine of friendship.

MY PIPE AND I.

Sitting all alone, this cold December,
Solitary,—but with fertile thought,
Gazing on the coal, whose dying ember
Typified the worth of "friendship sought;"
Gazing—'till my heart grew sad, and sadder,
Mourning over hope's defeated aims:—
In this state of melancholy musing,
Grieved, dejected, at the world's misusing,
Did I, with a listless effort, try
The panacea of "MY PIPE AND I."

Soon the fragrant weed, it's life exhaling,
Steeped my senses with a soothing balm;
Graceful columns, in their flight revealing
Phantom images of grotesque form;
Now advancing, and anon retreating,
Ever changing—ne'er the same repeating;—
Thus the mystic circles 'round me hie,
Fairy offspring of "MY PIPE AND I."

Now no longer gloomy thoughts oppressed me,
Gone were all the promptings of despair;
Better, kinder influences possessed me,
Overcoming dull, corroding care;
And my heart, so filled with new emotions,
Gathered strength to battle on once more.
Thus, with hope and energy attending,
Wishing now, to meet the ills impending:—
Could I fail to bless the genial tie
Binding us so close, "MY PIPE AND I?"

FARMERS' BOYS.

Out in every tempest,
Out in every gale,
Buffeting the weather,
Wind and storm and hail;
In the meadow mowing,
In the shady wood,
Letting in the sunlight,
Where the tall oaks stood.
Every fitting moment,
Each skillful hand employs—
Bless me! were there ever
Things like farmers' boys?

Though the palm be callous,
Holding fast the plow,
The round cheek is ruddy,
And the open brow
Has no lines and furrows
Wrought by evil hours,
For that heart keeps wholesome,
Trained in nature's bowers,
Healthy, hearty pastime,
The spirit never cloys;
Heaven bless the manly,
Honest farmers' boys!

At the merry husking,
At the apple bee,
How their hearts run over,
With genial, harmless glee,
How the country maidens,
Blush with conscious bliss,
At the love word whispered,
With a parting kiss;
Then the winter evenings,
With their social joys!
Bless me! they are pleasant,
Spent with farmers' boys.

[Merry's Museum.

THE PARTING HOUR.—The hour is coming, and it is a fearful and solemn hour, even to the wisest and the best; the hour is coming, when we must bid adieu to the scenes which please us, to the families we love, and to the friends we esteem. Whether we think, or whether we think not, that the body which is now warm and active with life shall be cold and motionless in death—the countenance must be pale, the eye must be closed, the voice must be silenced, the senses must be destroyed, the whole appearance must be changed by the remorseless hand of our last enemy. We may banish the remembrance of the weakness of our human nature, we may tremble at the prospect of dissolution, but our reluctance to reflect upon it, and our attempts to drive it from our recollection, are in vain. We know that we are sentenced to die, and though we sometimes succeed in casting off for a season the conviction of this unwelcome truth, we never can entirely remove it. The reflection haunts us still; it haunts us in solitude; it follows us into society; it lies down with us at night—it awakens with us at morning. The irrevocable doom is passed upon us, and too well do we know it. "Dust thou art, and to dust thou shalt return."—Townsend.

FORTUNE AND THE DREAM.—A dream flitted past the cavern where Fortune was sleeping, and awoke her from her slumber.

"Whence comest thou?" asked the goddess.

"From a maiden," said her aerial visitor, "over whose pillow I have hovered all night. I wore the shape of a lover, of rank and wealth, with horses and equipages, and a train of liveried servants. I kneeled and kissed her hand, and had just won her consent to be mine, when day broke and I vanished. But the good child will think of me all day and be happy."

"My fate is not so happy a one as thine," replied Fortune. "'T was but lately I visited a merchant, and made him prosperous and rich. While I remained with him he was contented, but yesterday I turned away my face from him and he hung himself. Why should those whom thou visitest feel thy disappearance less? Am not I, too, a dream?"

Extracts from "Never too Late to Mend."

It is a noble sight to see an honest man "cleave his own heart in twain, and fling away the baser part."

When two loving hearts are torn asunder, it is a shade better to be the one that is driven away into action, than the bereaved twin that petrifies at home.

Good men are human suns! They brighten and warm wherever they pass. Fools count them mad till death wrenches open foolish eyes. They are not often sung by poets when they die; but the hearts they heal and their own are their rich reward on earth, and their place is high in heaven.

Good is stronger than evil. A single really good man in an ill place is like a little yeast in a gallon of dough: it can leaven the mass.

Treat a man like a dog, and you make him one.

GREAT MOUSE HUNT.—"A great mouse hunt," says a Bridgport paper, "recently came off in this vicinity, consisting of two parties of forty a side, with a large number of dogs, which succeeded in killing, during a day's sport, 959 rats, and 31½ bushels of mice. The captains of the two parties were Joseph Fletcher and Charles H. Hill; and Mr. Fletcher's party won by 65 rats and 4½ bushels of mice." If this story were not pretty squarely told, we should hardly be disposed to credit it.

A lady relating her matrimonial experience said: "At first, on retiring of a cold night, my husband would say to me, 'put your dear little tootics with mine;' but soon it was, 'keep your cold hoofs off me.'"

HORTICULTURAL.

Commercial Nursery,

Three-Quarters of a Mile East of the City of San Jose.

THE Proprietors of this Nursery, having received the award of the

FIRST PREMIUM OF THE STATE SOCIETY

the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of

FRUIT AND ORNAMENTAL TREES,

For the Trade of 1856 and 1857,

that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.

Our Stock consists of

One Hundred Thousand Trees,

FROM FOUR TO ELEVEN FEET IN HIGHT.

Apples, 20 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;

TOGETHER WITH

Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.

The French Garden,

Near the Cottage, on the Santa Clara Road.

A. DELMAS, ... PROPRIETOR.

GRAPE VINES! GRAPE VINES!!

THE Proprietor of these extensive grounds would take pleasure in calling the attention of the public to the very great collection of Grape Vines, which he will offer the present season.

The Fruit from this Garden was exhibited at the late State Fair, and received the Diploma of the Society. The White Wine made from this Vineyard received the First Premium of the State Society. This Vineyard also obtained the First Premium for the Best Vineyard of Foreign Grapes, the present year.

The Proprietor will offer the present season his grand collection of Eighty One Varieties. Among this splendid assortment will be found—

Black Hamburg;
Chasselas of Fontainbleau;
Chasselas of Frontignac;
Cannon Hall Muscat;
Muscat of Alexandria;
Charlesworth's Tokay;
Syrian; Black July;
Golden Chasselas;

Together with every variety of the Grape known and approved.

The undersigned is confident that this collection is the largest and most complete in the country, and to this the attention of the public is particularly invited.

The subscriber would also offer—

APPLE, PEAR, PLUM, PEACH, APRICOT, NECTARINE, and other Fruit Trees.

—Also,—

RASPBERRY, CURRANT AND GOOSEBERRY TREES,

In good assortment.

Catalogues of all the varieties grown in this Garden will be sent to all who desire them, by addressing letters to the proprietor.

All orders will be answered promptly, and Trees and Vines carefully packed for any place in the country.

A. DELMAS,
French Gardens, San Jose.

San Jose Nursery.

THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of

FRUIT AND ORNAMENTAL TREES,

ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.

Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 69 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.

The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer

Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.

In each of the above the very best and most approved varieties.

The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—

Black and Honey Locust;
Chinese Allanthus, Catalpas.

—Also,—

20,000 Mulberry Trees,

All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!

In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.

The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.

Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.

L. P. & W. F. DODGE'S

DOUBLE ACTING PUMP.

(Patented June 7th, 1853.)

THESE Pumps are double acting, and combine both the Suction and Force Principles. The Pistons are of the best bell metal composition, making them available for use in either hot or cold liquids.

The Cylinder is without divisions or chambers, has no valves at the eduction port, and is bored out perfectly true and smooth. From the construction of the cylinder and water passages, the pistons require no packing, being fitted perfectly to the cylinder. Two important evils in Pumps generally, are thus overcome—viz: the amount of power required to work them, and the wear of the packing. The cylinder and pistons being perfectly true and smooth, it naturally follows that there should be less friction, and, consequently, less wear, than in pumps generally.

The water enters the cylinder upon its side, at each end alternately, passes through the piston heads, and is discharged through the round air-vessel in the center of the pump. These pistons are each furnished with a valve, connected in such a manner that both must operate simultaneously, one valve opening at the precise moment the other closes; consequently these pumps may be run at higher speed than pumps generally.

These pumps have received numerous Medals, Diplomas and commendatory notices from various State and and County Fairs, including Medal and Diploma at the Crystal Palace Exhibition in New York.

The power of a single individual applied to the size usually furnished for family use, is sufficient to draw water from a well twenty-five feet deep, and throw it upwards of fifty feet from a hose-pipe, rendering it a very efficient FIRE ENGINE, ready for use at any moment.

Circulars containing full information relative to size, prices, &c., may be obtained by addressing the

The Mathematical Works of Professor Davies are too well known to require special notice. They are the text-books (in connection with those of Professors Church and Bartlett) of the United States Military Academy at West Point, and nearly all the colleges in the United States. The elementary Course of Mathematics, consisting of the revised editions of Arithmetics, Algebra, Geometries, &c., and recommended by the superintendents of public instruction of Michigan, Illinois, Missouri, Wisconsin, Minnesota and North Carolina, and are used in the best schools and academies throughout the United States. Clark's English Grammar, Willard's School Histories, Parker's School Philosophy, Fulton and Eastman's Book-keeping, and Monteith's and McNally's School Geographies are also the favorite books in each of the above named States, as well as in all parts of the country where they are used. v7-1 2m

The Farmer's Drill.

[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baldimore, Oct. 28th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.

Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.

This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

For full particulars address
M. G. GRIFFITH, Agent, Diamond Springs, Cal.;
Or to C. FINKBONER
(Of the firm of G. W. Stewart & Co.),
v7-2 3m* Grain Dealers, San Francisco.

To the Farmers.

THE subscriber would respectfully announce to the Farmers of California that he has now on hand and for sale, on the most reasonable terms, a good assortment of Agricultural Implements suitable to the wants of the farmer at this season of the year, amongst which is an IRON GANG PLOW with Steel Mould and Shear;
Every variety of Cast Plows of the most approved makes.
Side Hill Plows; Michigan Reclaiming Plows;
Peoria Plows; and a Cincinnati Steel Mould and Shear Plow, of extra quality; Harrows, Corn Shellers;
Cans of superior kinds for Dairymen.
Just received and arriving by every Clipper.

J. L. POLHEMUS
DRUGGIST
190
J. St.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.
I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.
Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for
Half the Price Usually Charged
By other Druggists, legitimate or illegitimate, and of
The Purest Drugs and Chemicals.

THIRDLY.
I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.
We Keep Open all Night!
And charge no more for medicines than in the day time.

FIFTHLY.
We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.
Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.
We have received the agencies for the following valuable articles:
Budds' Nerve and Bone Liniment, warranted the best in California.
Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.
Flower of the West, for Fever and Ague.
Delight's Spanish Lustral, for the Hair.
HUDSON'S CALIFORNIA GROWN MUSTARD.
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.
We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

FIRST PREMIUM AGAIN!

R. H. VANCE,
HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.
Rooms, cor. Sacramento and Montgomery streets,
SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

v6-14 R. H. VANCE.

MEDICINES, &c.

FOR THE REMOVAL AND PERMANENT CURE OF
All Diseases arising from an Impure State of the Blood or Habit of the System.

In this preparation are strongly concentrated all the medicina properties of Sarsaparilla, combined with the most effectual aids, the most salutary productions, the most potent simples of the vegetable kingdom; and the combination is such that one modifies and improves the other, producing a compound differing entirely in its character and properties from any other preparation, and unrivalled in its operation on the system when laboring under disease. It has been so fully tested, not only by patients themselves, but also by physicians, that it has received their unqualified recommendations and the approbation of the public and has established on its own merits a reputation for VALUE and EFFICACY far superior to the various compounds bearing the name of Sarsaparilla.

From the Army.

MONTEREY, CAL., January 18, 1850.

MESSRS. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefited as I have been. I arrived here by the overland route, about the first of October last. A few days after I was attacked with a very disagreeable eruption of the skin, which my physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely.

With high regards, yours, &c.,
J. H. MILLER, Lieut. U. S. A.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists and Chemists, 100 Fulton-street, corner of William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

CLOVE ANODYNE
TOOTHACHE DROPS.
Complain no more of Aching Teeth.

These Drops have been extensively used by thousands, whose experience has proved that the Anodyne will give immediate and permanent relief after the failure of every other remedy. It is pleasant to the taste and smell, and a few applications will entirely remove the pain and soreness from a decayed tooth, so that it may be filled and rendered as useful as ever. When the pain proceeds from the face, or from the gums around a tooth apparently sound, this Anodyne will give a speedy relief by rubbing a few drops on the part affected.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, No. 100 Fulton-street, corner William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v6 21 3m

THE TRIUMPH OF PHILOLOGY.—*A Multiform and Many-Colored Multitude.*—Philology, or the acquisition of languages is in itself a very harmless and amusing pursuit for those who have time to spare, and not enough of brains to devote themselves with any prospect of success to the creation of original ideas. But the importance laid upon a knowledge of the dead languages by all the European colleges and by too many of our own, is supremely ridiculous. It is very true that an acquaintance with the works of Homer, Plato, Sophocles and Cicero, may be desirable; but have we not translations of these in the English tongue, and might it not profit us somewhat more to have carefully rehearsed and studied the noble teachings of Bacon, Shakspeare, Milton Locke, and Webster? If a man has but one idea, though he may have half a dozen different tongues to express it in, he has but one idea after all. Elihu Burritt, for example, "the learned blacksmith" of Worcester, can converse and write in over half a hundred different languages and dialects; but he has never been suspected of any inordinate supply of brains—and up to the present moment—we are unacquainted with any river that has been set on fire by his genius.

Philology pursued for its own sake is a rank humbug and nothing else; but when a mastery of tongues is used, as Professor Holloway has used it, for the dissemination of new ideas and truly valuable discoveries among all tribes and nationalities of men, we recognize in it one of the noblest instruments of civilization, and are grateful for the assistance it imparts.

Whether the long and laborious scientific researches and experiments which Holloway had to undergo before he succeeded in perfecting his universal remedies, left him time for the personal acquisition of all the languages now spoken upon earth, we do not know, and, were we speaking of an ordinary man, should think they could not possibly; but in our estimate of such a character as his, the common standard of intellectual measurement is at fault; and it seems not improbable that the mind which obtained dominion over all forms of human malady, could easily obtain the key to every tongue.

Whether this be so, or not, certain it is that Holloway has established printed journals, in all the known languages of the world—journals especially devoted to the furtherance of medical truth and a proclamation of the saving principles embodied in the use of his Universal Remedies. The philologist could desire no richer treat than a perusal of the many thousand files of papers, all of them in different tongues, which can be seen in in his establishment; and the British Museum, endowed as it has been both by the munificence of individuals and bodies corporate, is indebted to no single individual more than it is to Professor Holloway.

If we needed a grand interpreter of humanity, an interpreter whose former deeds and general character would everywhere secure a favorable audience for whatever new ideas he might choose to lay before the assembled congregation of mankind, it is to Holloway that we should of necessity apply. He indeed, has turned philology to good account; and is reward is this—that it enables him to understand the manifold and ceaseless songs of benediction and gratitude which arise to him from the full hearts of the millions his Universal Remedies have rescued from the very jaws of the grave.

This indeed is the most pregnant triumph of philology, and by far the most useful purpose that the possession of many tongues has hitherto been applied to. All honor to Professor Holloway, and may he long continue to dispense the Universal Remedies to the multiform and many-colored multitude who have been taught by experience to look to him as their medical redeemer. —N. Y. Nat. Police Gazette.

SOUTH AMERICA.—Dates from Valparaiso to the 16th, and from Callao to the 26th January, have been received.

The whole wheat crop of Chili promised to be abundant; the reaping season had arrived, and the new grain would soon be in market.

The floating dock being constructed at Valparaiso, although not finished, had been launched; and the building of a dry dock, to cost $200,000, was in contemplation.

Chili continues her exertions to diffuse useful information amongst her people; during the last fortnight four new schools had been endowed—one for boys and three for girls.

The Copiapo mines promise better for the year 1857. The first advices received this year from that province are satisfactory.

In Peru the revolution was progressing, although the Vivanco party had made little or no further progress towards gaining possession of Callao and Lima, the only two points now in the hands of Castillo.

McCOMBE & Co.'s AMERICAN EXPRESS.—Our friends at San Mateo, Redwood City, Woodside, Santa Clara and San Jose, or any other place on the route of this Express Company, can forward to us through them, as they are agents for us.

To Poultry Raisers.

A SURE Remedy for the Disease of Fowls, peculiar to California, put up in half pound packages, sufficient to cure from forty to fifty fowls.

Full description of the disease and directions for cure accompanying each package. Price $1.

For sale by WARREN & CO.,

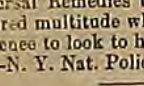
PACIFIC MUSEUM,

Corner of Clay and Kearny streets.

INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!



THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Worf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montez.

☞ A full Brass Band is in attendance every evening. Open every day and evening (Sundays excepted).

THE "HORTICULTURIST" AND Journal of Rural Art and Rural Taste.

COMMENCED BY A. J. DOWNING,

Author of "Landscape Gardening," "Designs for Cottage Residences," "Fruit and Fruit Trees of America," "Country Houses," &c.

Edited by J. JAY SMITH, Editor of the North American Sylva.

THIS popular publication, which is gradually extending its influence throughout the country, and is becoming indispensable to the tasteful Gardener, the Fruit Culturist, and the Floriculturist, will be continued under the editorship of J. Jay Smith, whose ability and taste in matters of country life are highly appreciated through the country.

The cultivation of the beautiful, both in Nature and Art, is justly esteemed an important element in education, and recommends itself to the attention of all who wish to make their dwelling and grounds attractive, and to surround themselves with those luxuries and adornments that spring from the fruitful bosom of the earth when cultivated by the practical hand. The typographical execution of the HORTICULTURIST is designed to be an index to its contents—neat, chaste and elegant. It embraces within its scope—

I. THE DESCRIPTION AND CULTIVATION OF FRUIT AND FRUIT TREES—a subject of vast importance, and in which we are already more interested than any other people.

II. THE DESCRIPTION AND CULTIVATION OF FLOWERS AND FLOWERING PLANTS AND SHRUBS, from the most delicate and tender to the most hardy and robust.

III. TO THE DESCRIPTION AND CULTIVATION OF ALL EDIBLE PLANTS, which are, or should be, grown in our gardens.

IV. TO GARDENING AS AN ART OF TASTE—with Designs for Ornamental or Landscape Gardening.

V. TO RURAL ARCHITECTURE—embracing Designs for Rural Cottages and Villas, Farm Houses, Lodges, Gates, Vineries, Ice Houses, etc., etc.

VI. TO ARBORICULTURE—or the Planting and Culture of Forest and Ornamental Trees.

VII. TO BOTANY AND ENTOMOLOGY—so far as these branches are connected with the general subjects to which the work is specially devoted.

The extended and valuable correspondence of THE HORTICULTURIST presents the experience of the most intelligent cultivators in America; the superior illustrations, and the instructive and agreeable articles from the pens of the editor and contributors, make it eagerly sought after by even the general reader interested in country life. To all persons alive to the improvement of their gardens, orchards, or country-seats—to scientific and practical cultivators of the soil—to nurserymen and commercial gardeners, this Journal, giving the latest discoveries and improvements, experiments and acquisitions in Horticulture and those branches of knowledge connected with it, will be invaluable.

A New Volume (12th year) commences with the January number for 1857; and it will be the constant aim of the editor and publisher, by every means in their power, to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style of the periodical press, each number containing 48 pages, embellished with a frontispiece and several other original and well-executed engravings. At the end of the year it will make a volume of six hundred pages, beautifully illustrated with over 100 engravings, many of them drawings of fruit and flowers from nature. These volumes, if taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature.

TERMS—Two Dollars a year—Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the art—Price, $5.

Sale of the Superior Shorthorn Herd

OF THE LATE

NOEL J. BECAR.

To the Editors of the California Farmer:

DEAR SIRS: I wish to communicate through your columns, to the Breeders of Shorthorns, that I have been authorized, by the executors of the late Noel J. Becar, to dispose of his entire herd of far famed Shorthorns. We have also determined not to sell a single animal from that herd until JUNE, 1857, on the day of my annual sale, which generally takes place about the 20th.

Many inquiries have been made by letter, and otherwise, and I take this course to answer previous and future questions. A very full and explanatory Catalogue will be issued in due time, and very generally circulated to all my present correspondents, and as many others as may desire it.

SEEDS, &c.

DIOSCOREA BATATAS, New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid.* Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty-five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

ALSO,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

CHINESE SUGAR CANE, OR, SORGHO SUCRE. PURE SEED.

THE subscriber hereby informs the Planters, Farmers and Gardeners of the United States, that he has obtained from R. Peters, Esq. of this city, the control of his crop of Seed of this valuable plant, some of the properties of which may be briefly summed up as follows:

First. An acre of the stalks properly cultivated, will yield from 400 to 500 gallons of pure Sirup, equal to the best New Orleans.

Second. It surpasses all other plants for fodder and for feeding green to cattle or hogs, on account of the great abundance of sugary juice which it contains; and, sown in close drills, will yield from 30,000 to 50,000 pounds of superior Green Fodder to the acre.

Third. It is so certain and prolific a crop that planters may be sure of succeeding with it as a sirup plant anywhere south of the State of New York.

This seed, which has been carefully kept pure, is now offered in cloth packages, each containing enough to plant half an acre four feet by one and a-half, will be furnished by mail at $1 30 each, or at $1, if sent by express, freight unpaid.

Dealers in Seeds and Country Merchants, or persons wishing to plant by the quantity, can be supplied at a liberal discount from retail rates.

A pamphlet containing a full description of this plant, its history, valuable properties, and a plate of the horse mill used for crushing, will be furnished by mail to all applicants.

Address, with plain directions for mailing or shipping,
W. P. ORME, Atlanta, Georgia.

Shell Mound Nurseries AND FRUIT GARDENS,

Near Brooklyn, Alameda county, directly opposite San Francisco.

THIS well known establishment is now prepared to offer to its patrons and the public in general, an extensive and varied assortment of Fruit and Shade Trees, Shrubs, Plants and Vines, comprising almost every article usually found in the Nurseries of the Atlantic States.

Our stock of Apple, Pear, Peach, Plum and Cherry Trees, we believe is of a quality unsurpassed in California.

Catalogues, with prices annexed, will be furnished on application.

All orders, accompanied by remittances, will receive prompt attention. Please address

R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco;
Or, JASON L. SANFORD, Agent, Brooklyn.

P. S.—We expect to receive in December from 50,000 to 70,000 Trees, Shrubs, Plants and Bulbous Roots, from the East, on the arrival of which a supplementary catalogue will be issued. v6-18 3m

Pioneer Nursery.

THE undersigned, proprietor of this now well established Nursery, to which was awarded the First Premium by the State Agricultural Society at its last Annual Fair, announces to his friends and patrons that he is prepared to offer them, the present season, a collection of Fruit and Ornamental Trees equal to any in the country, and far superior to any heretofore offered.

Having had in bearing last year, forty-seven kinds of Apples, and having in bearing the present year, about thirty-five varieties of Peaches, added to the knowledge we have acquired by comparing them with other varieties grown in various localities, we have been enabled to ascertain with certainty what kinds are worthy of culture, and such varieties only do we offer to the public the present season.

We call your attention particularly to our Seedling Peach, named by the Academy of Natural Sciences, "Myers' Rareripe," which we offer this season for the first time. The following certificate will speak for itself:

ALAMEDA, July 25th, 1856.

The subscribers having seen and eaten of the new variety of Peach grown by A. H. Myers, in his "Pioneer Nursery," Alameda, and by the Academy of Natural Sciences of San Francisco named "Myers' Rareripe," do cordially and unhesitatingly pronounce it a most valuable acquisition to the Pomology of our State, in regard both to its early ripening, and its melting, luscious qualities, being in these respects superior to any variety of Peach that we have yet met with on this coast.

George Lee, Lee's Garden, Oakland.
Henry Gibbons, M. D.
N. W. Palmer, firm of Sonntag & Co., Horticulturists.
T. J. Nevins, Amateur Gardener.
A. M. Crane, County Judge.
Wm. Sherman.

We speak to our friends and patrons thus early, that they may be apprised of our ability to supply them with all the desirable varieties of Fruits, and thus save the trouble and expense of sending out of the country for Trees; and we can assure them that time and money will be saved by giving us a call.

Our stock embraces—

40,000 Apple Trees, forty varieties, one, two and three years old;	
30,000 Peach Trees, in bud, best varieties;	
4,000 Peach Trees, two years old,	"
1,000 Pear Trees,	"
1,000 Cherry Trees,	"
1,000 Plum Trees,	"
1,000 Apricot Trees,	"
1,000 Nectarine Trees,	"

Also, Almond, Fig and Quince Trees;

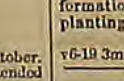
25,000 Currant Bushes, with a sprinkling of everything rich and rare, usually found in a well regulated Nursery.

We particularly invite our citizens to our Nursery and examine for themselves before purchasing elsewhere. Information respecting the best varieties of fruits, and the planting and pruning of them cheerfully rendered.

A. H. MYERS,
v6-19 3m Pioneer Nursery, Town of Alameda, Alameda Co.

Smith's Pomological Gardens AND NURSERY.

On the American River, 2½ miles from Sacramento.



THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast.

Care and experience in selecting and propagating varieties are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear,
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Allanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of extra size Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for beauty and beauty we challenge comparison.

GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

*** Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, and *for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

Agricultural Reviews and Essays—No. 5.

China and its Provinces.

"TRAVELS in Tartary, Thibet and China, by Mons. Huc."
"BARROW'S Account of Lord Macartney's Embassy to China."

HE who wishes to get acquainted with the Agriculture of China, the singular implements which its inhabitants use in cultivating the soil, and the peculiar methods used by them for raising water for the purpose of irrigation, should read "Barrow's Account of Macartney's Embassy" to that country. It is true the work is minute and tedious, and it was written a long time ago; but the little that is known of that singular people makes anything in the shape of information interesting; and besides, as the arts with them are stationary, and improvement at a perfect stand, those circumstances which would be serious objections in almost any other case, in this instance are scarcely to be looked upon as objections at all.

Ever since Sir William Chambers introduced to the public notice, in the Royal Gardens at Kew, an entirely new system of Landscape gardening from that country, which with various modifications is now universally recognized and adopted, the attention of the world has been directed to the natural mode of laying out pleasure grounds in China, which has there prevailed from time immemorial. But the minuteness of their system of Agriculture, not even surpassed by the garden-system of Belgium, is also deserving of better investigation; and nothing would have kept the civilized nations of Europe and America so much in the dark regarding it as they are, but the extreme jealousy of the Chinese government, which throws every obstacle in the way of traveling through the interior of the country.

It is with no ordinary feeling of interest, therefore, that the reader peruses the agreeable account of the journeyings of two French Missionaries (Gabet and Huck), who recently traveled through a portion of that empire, of which very little was previously known. Although, owing to their object being entirely of a religious character, there is little in their journal of interest to the farmer as such, yet at the present time, when the existing difficulties with ourselves and the English at Canton, under proper management may lead to objects of great national importance, and more particularly (in consequence of our proximity) to the people of the State of California, I believe the readers of the FARMER will excuse me if on this occasion I introduce subjects which, from the general title which I have assumed for this Series, under other circumstances might be looked upon as suppositions.

Monsieur Huc, in company with his associate Gabet, traveled westwards from Pekin, pretty much in the direction of, and along the line of the Great Chinese Wall, which formed the boundary of the ancient Empire—sometimes on the one side among the Mongol Tartars, and sometimes among the Chinese (proper). He is a simple and rather weak-minded man; and with the natural garrulity of such people keeps talking away about himself, and looks on his mission as of such paramount importance, as to give the reader only occasional glimpses, and apparently without intending to do so, of objects of more general interest.

The Tartars, among whom he principally traveled, are descended from the ancient Scythians, and preserve to this day the dexterity of their ancestors in archery and horsemanship. Their first conqueror seems to be the Madyes of Herodotus; who, with his Scythian hordes, carried his arms into Syria; and reached even the confines of Egypt. Towards the year 48 of our era, the Tartar empire was divided into northern and southern. Under the dynasty of Han, the northern Huns were completely defeated by the Chinese armies. Obliged to abandon the regions wherein they had settled, they proceeded in large numbers towards the west, to the borders of the Caspian Sea; and spread themselves over the countries watered by the Volga, and around the Palus Mœotis. In 376 they commenced those formidable irruptions upon the Roman empire, so brilliantly described by Gibbon; and in the beginning of the fifth century drove before them the Suevi, the Goths, the Gepidæ and the Vandals; with whom they advanced to ravage Germany. The southern Huns who had remained in Tartary were for a long time weakened by the dispersion of their northern countrymen; but they recovered by insensible degrees, and towards the close of the twelfth century, under the famous Tchen-Kis-Khan, the power of the Tarters, long confined within the desert steppes of Mongolia, broke at length its bounds, and carried pillage and death even to the most remote regions. China, India, Persia, Syria, Muscovy, Poland, Hungary, Austria—all felt the terrible blows of the victorious Tartar. But the conquests of Tchen-Kis-Khan and his successors, and in later times those of Tamerlane (or Timour), who transferred the seat of the Mongol empire to Samarcand, contributed to renew the intercourse of Europe with the East, and favored discoveries which have been so useful in the arts and sciences. The irruption of the Mongols, by throwing everything into agitation, neutralized distances, and brought nations together. By this shock of nations, the darkness of the middle ages was dispersed. Calamities, which at first aspect seemed only destined to afflict mankind, served to arouse them from the lethargy in which they had remained for ages; and the subversion of empires was the price, at which Providence accorded to Europe the light of modern civilization!

The manners of a people of such historical importance give an interest to the journal of our obscure missionaries, which otherwise it would not deserve. They tell us that those Tartars who succeeded in conquering China, and establishing a Tartar dynasty on the throne, at the present day, are mere tributaries of that country; whose sovereigns now treat this land of their ancestors more as if it had been conquered, than as deserving of especial filial respect on their part for being the cradle of the conquerors.

In consequence of this subjugation, if we may so call it, of the Tartars, but little of the former spirit of those mountaineers, in that portion of Tartary which approaches Pekin, belongs to them now. "The occupations of the men," says Monsieur Huc, "are of a very limited range; and consist wholly in conducting the flocks and herds to pasture. This, for men accustomed from infancy to horseback, is rather an amusement than a labor. In point of fact, the nearest approach to fatigue they ever incur is when some of their cattle escape. They then dash off at full gallop in pursuit, up hill and down dale, until they have found the missing animals, and brought them back to the herd. The Tartars sometimes hunt, but it is rather with a view to what they can catch, than from any amusement they derive from the exercise. With the exception of their equestrian exercises, the Mongol Tartars pass their time in absolute *far niente;* sleeping all night and squatting all day in their tents, dozing, drinking tea, or smoking."

On the borders of Thibet they are less subservient to their imperial masters, and exhibit more of their original boldness of character; and our author adduces several instances, tending to show the feeble tenure of the Chinese authorities, over the indomitable mountain tribes residing in that distant region.

To qualify themselves for their journey, our travelers assumed a dress which they thought would be more indicative of their real character than the Chinese garb which they had worn at Pekin. "We announced to the christians of the inn that we were resolved no longer to look like Chinese merchants; that we were about to cut off our long tails, and to shave our heads. This intimation created great agitation; some of our disciples even wept; all sought by their eloquence to divert us from a resolution which seemed to them fraught with danger; but their pathetic remonstrances were of no avail. We put on a long yellow robe fastened at the right side with five gilt buttons, and round the waist by a long red sash; over this was a red jacket with a collar of purple velvet; and a yellow cap, surmounted by a red tuft completed our new costume. Breakfast followed this decisive operation, but it was silent and sad. When the Controller of the Chest brought in some glasses, and an urn wherein smoked the hot wine drunk by the Chinese, we told him, that having changed our habit of dress, we should change also our habit of living. 'Take away,' said we, 'that wine, and that chaffing-dish; henceforth we renounce drinking and smoking. You know,' added we laughing, 'that good Lamas abstain from wine and tobacco.' The Chinese christians who surrounded us did not join in the laugh; they looked at us without speaking, and with deep commisseration, fully persuaded that we should die of privation and misery in the deserts of Tartary."

The reader is ready to admit, that in their new rig they must have been a pair of perfect missionary dandies; and no doubt they believed, with fops in general, that their dress was calculated to make an impression on all beholders. Such however does not appear to have been the case. So the next suit they got, when the approach of winter made it necessary for them to buy warmer clothing, was of a very different character. "Upon a consideration of the meagerness of our exchequer, we came to the resolution, that it would be better to purchase what we required at some second-hand shop. In China, and Tartary, no one has the smallest repugnance to wear other people's clothes. People who buy clothes buy them indifferently, new or second-hand. The question of price is alone taken into consideration; for there is no more delicacy felt about putting on another man's hat or trowsers, than there is about living in a house that some one else has occupied before you. We went out, therefore, in search of a second-hand clothes shop, of which in every town there is a greater or less number, for the most part in connection with pawn-shops. We were shown magnificent garments, handsome garments, fair garments, endurable garments; but the consideration of expense was in each instance an impracticable stumbling-block. After going about the whole day, after making the acquaintance of all the rag-merchants in the Blue Town, after turning over and over all their old clothes, we were fain to return to the second-hand dealer whom we had first visited, and to make the best bargain we could with him. We purchased from him, at last, two ancient robes of sheepskin, covered with some material, the nature of which it was impossible to identify, but the original color of which we suspected to have been yellow. We proceeded to try them on, and it was at once evident that the tailor, in making them, had by no means had us in his eye. M. Gabet's was too short, and M. Huc's too long; but a friendly exchange was impracticable, the difference in hight between the two missionaries being altogether disproportionate. We at first thought of cutting the excess from the one in order to make up the deficiency of the other; but then we should have had to call in the aid of a tailor, and this would have involved another drain upon our purse. The pecuniary consideration decided the question, and we determined to wear the clothes as they were—M. Huc adopting the excellent expedient of holding up, by means of a girdle, the surplus of his robe, and M. Gabet resigning himself to the exposure to the public gaze of a portion of his legs. Provided with our sheepskin coats we next asked the dealer to show us his collection of winter hats. We examined several of these, and at last selected two caps of fox-skin. These purchases completed, each of us put under his arm his packet of old clothes, and returned to the Hotel of the Three Perfections."

What a transformation! What a descent from the sublime to the ridiculous! Instead of their former "rainbow-robes," half-worn dresses of dirty sheepskin, and rough greasy caps made from the skin of a stinking fox! Truly, when thus equipped, they must have looked

"Rather more like guys than swells!"

It was worse than "the dog returning to his vomit"—it was like the butterfly re-assuming the crawling form of the grub, or the human soul returning from heaven, to re-animate the "prison-house" from which it had escaped!

Our travelers seem perfectly oblivious of the propriety of giving the latitudes and longitudes of the different places which they visited; and though they have appended to their book an old map of China, on which they have been at the trouble of having a dark line drawn, indicating their route, it is with difficulty that we ascertain their different whereabouts, as very few places which they describe are marked upon it. The farmer too feels annoyed that they give him no definite description of their modes of agriculture. We are therefore left to presume that they resemble pretty much in that respect the Chinese, as described by Barrow. But after all, it was a pastoral, and not an agricultural country through which they passed—consisting in some places of sandy steppes, in others of vast grassy prairies; and now of mountainous districts, with broken and varied scenery. In this latter portion there is abundance of metals, including gold and silver. Now and then, however, we do hear a little of their Agriculture. "The Mongol Tartars of Western Taumet do not lead the pastoral and nomadic life; but cultivate their lands and apply themselves to the arts of civilized nations. As may well be imagined, they have completely lost the stamp of their original Mongol character, and become more or less Chinese. Many of them do not even speak a word of the Mongol language. Indeed they are perfectly right in preferring the occupation of the agriculturist to that of shepherd; for they have magnificent plains, well watered, and favorable to the production of all kinds of grain crops. Everything about Western Taumet bears the impress of affluence; and all the villages and roads are beautified with groups and avenues of fine trees."

Some of the animals of Thibet seem peculiar to that country, but of all their animals the most wonderful is the Unicorn—not however the unicorn of the Scriptures, which was evidently the one-horned rhinoceros, nor the fabulous animal on the royal arms of England, but a sprightly animal of the gazelle kind; although of their unicorn they also have fables in the truth of which they firmly believe. "The Unicorn of Thibet is called in the language of the country *serou*, in Mongol *kere*, and in Chinese *tou-kio-cheou* which means the one-horned animal, or *kio-touan* which means the straight-horn. The Chinese, Mahometan, and Mongol historians agree in the following tradition: Tchingis-khan having subdued Enedkek (India), as he was ascending Mount Djadanaring, he perceived a wild beast approaching him of the species called serou, which has but one horn on the top of his head. The beast knelt thrice before the monarch, as if to show him respect. Every one being astonished at this event, the monarch exclaimed, 'The Empire of Hindostan is, they say, the birthplace of the majestic Buddhas and the Buddhistavas, and also of the powerful Bogdas or princes of antiquity. What then can be the means of this animal saluting me like a human being?' Having thus spake, he returned to his country. But Mr. Hodgson, an English resident in Nepaul, has at length achieved the possession of a unicorn, and put beyond doubt the question of the existence of this species of antelope. Its form is graceful like that of all the other animals of the antelope tribe, and it has likewise the incomparable eyes of the animals of that species. Its color is reddish like that of the fawn in the upper parts, and white below. Its distinctive features are first a black horn, long and pointed, with three slight curvatures, and circular annulations towards the base. These annulations are more prominent before than behind. There are two tufts of hair which project from the exterior of each nostril, and much down round the nose and mouth, which gives the animal's head a heavy appearance. The hair is rough, and seems not low, like that of all animals north of the Himalaya, which Mr. Hodgson had the opportunity of examining. The hair is about two inches long, and so thick that it seems to the touch a solid mass. Beneath the hair its body is covered with a very fine and delicate down, as are almost all the quadrupeds that inhabit the lofty regions of the Himalaya mountains, particularly the famous Cashmere goats."

But the great object of our missionaries was not to acquire a knowledge of the agriculture of the country, nor to become acquainted with its zoology. They went for the purpose of overturning the religion of Buddha, and establishing that of Christ; and, as might have been expected, with very little success. In fact, they found a system prevailing in those countries which was supported by arguments, so much akin to those which they intended to use in favor of Christianity, that those simple men considered it could only be attributed to a special contrivance of the Devil. The religion of Buddha teaches the belief in one great divinity, whose throne is in heaven, but who condescends to live with men perpetually in the person of the Tale Lama. What could our missionaries say to such a system, to which their priests might not have a ready and unobjectionable answer? Their own system also embraced the reasonableness of the Divine nature being connected with the human for a time, and being a partaker of all the sorrows incidental to humanity, and condescending to be in person a guide and director of erring mortals. They do not abrogate such a doctrine, but extend it; by saying that at no time is such a guide not wanted, and that it is not likely that he, who was so benevolently inclined in former times, has less regard for his creatures now.

Leaving such matters for the consideration of divines, the statesman and politician discover, in this grand article of their faith, the means by which the whole country may be subdued, without striking an angry blow. The Chinese have been foolish enough, just now, to provoke the great, though in their eyes dormant, powers of England and the United States to avenge petty insults and open outrages, which it may reasonably be supposed, if not vigorously checked, will form a source of endless and insufferable annoyances. Now, what an excellent opportunity is held out for an intriguing government like that of England, by getting possession of the person of their terrestrial god, and keeping him as a splendid prisoner, of making him a mere puppet in their hands, and compelling him to dispense his blessings and maledictions as they tell him! By so doing they could rule as they pleased, for he who resisted their wishes would also, if they played their cards properly, be looked upon as a rebel against Heaven!

AGRICOLA.

A NEW VARIETY OF TOBACCO.—We have been informed by a friend that there is a new and valuable kind of Tobacco grown in the hilly portions of Ohio, called the "Kite Foot" Tobacco. This tobacco takes its name from the bird, and the leaf resembles in some degree the foot of the bird. It has been grown for foreign markets, and has always commanded very high prices. We should be glad to be advised relative to it, by any one that can enlighten us upon its true characteristics.

Irrigation vs. Deep Plowing.

WE have a very interesting letter before us, from the Merced river country, relative to Irrigation, and making inquiries about the best method of irrigating lands, the uses of the hydraulic ram, its power, cost, etc.

In answer to our correspondent, we would say, that the hydraulic ram can be had in the city of San Francisco, of various sizes and powers suitable for conveying water for ornamental purposes, or for irrigation to some little extent; but we have a much better plan for our friend of the Merced, than any that could be devised by a contrivance like the hydraulic ram. The best contrivance that ever was planned to supply moisture and nourishment to vegetation, and to secure a good crop in a dry country, or in a dry soil, is the subsoil plow, or the *deep tiller*.

We would earnestly urge our readers, not only on the Merced, but everywhere, to examine well the thousand proofs we have in this country, where deep plowing, and constant cultivation, have entirely done away with the costly machinery so long and so injuriously used upon the land of many of our cultivators. We are thoroughly satisfied that more injury has been done by improper and expensive flooding orchards and gardens, than all the gain ever effected; and we can recall many a farmer who has entirely ruined his crops, besides injuring his land and wasting his time, by a want of knowledge upon the subject.

We have presented so many articles upon the value of *subsoiling* and *deep plowing*, and have given so many proofs of its utility of late, that we had hoped those who were readers of our journal had been in some degree aware of the importance of a change of action in this respect, and had substituted the plow and cultivator for the water wheel and water pipe.

We are glad to have such inquiries made, for they elicit discussion; and we now ask those cultivators who have formerly spent thousands in irrigation, and who now have abandoned it and substituted the better plan of deep cultivation, to give us their experience. All who are large cultivators, or even to any considerable extent, who yet continue to flood lands that are half plowed in order to nourish crops, we invite them to visit the orchards and gardens of the Messrs. Thompson, at Suscol, that are *irrigated* by our plan of deep cultivation—where tens of thousands of trees are in the most flourishing condition, and where thousands of bushels of rich and luscious peaches were raised the past year, without a drop of water artificially given. We ask all who think *irrigation* necessary for general purposes, to go and see these grounds, and the manner of cultivation practiced there, and they will soon abandon all other plans but the subsoil plow, and deep and constant cultivation. We will, however, at an early day, further answer our friends of the Merced, relative to the use, value and cost of the hydraulic ram.

Beet Sugar.

THERE is an increasing interest and attention given to this subject among those who are cultivators of the soil. We have spoken of the interest shown by a public meeting at San José, and we rejoice to see this movement; good men, and men of means, have hold of the work. San José has most excellent soil for raising the Sugar Beet, and we believe they can succeed in this enterprise, if they will unite and work together; everything is in their favor,

We notice also, by the San José papers, that $10,000 have already been subscribed to begin the work. Success we say to the citizens of San José, and all honor to the county that shall be the first to establish a sugar manufactory on the Pacific coast.

THE LATE RAINS AT SAN JOSE.—The late heavy rains, says the San Jose Telegraph, have rendered the lands about San Jose more favorable for crops the ensuing season, than they have been for several years past. A farmer had remarked to the editor that his lands, which were high and dry, were wet last winter only to the depth of eight inches; but now they are saturated to the depth of at least three feet. The crops of grain and grass promise to be heavier this season than they have been since 1853. The farmers are all very busily engaged at present putting in their grain. Many had delayed until they had assurance of sufficient rain to bring forward a crop, and are now the more active to make up for lost time. Wheat put in by the middle of March stands a good chance of doing well, when the season is favorable. Much of the land in the valley is too high and dry to yield heavy crops, unless there is abundance of rain. But this, it is thought, should render it the more favorable for the growth of fruit trees; as these after being once fairly started, do better in a dry, gravelly soil, than in a stiff and wet one. Last season was one of uncommon drought, and yet the fruit trees never were more thrifty.

Flax Seed.

It has occurred to us that we could not serve the interests of our readers better than to give them some thoughts on the cultivation of flax seed. This crop is exciting more than usual interest throughout the country, on account of the demand for the fibre, as well as the seed.

For many years the most intelligent and thorough farmers in the older-sections of the Union have cultivated this crop for the seed alone; particularly in Ohio, New York, and other Eastern and Middle States. The usual practice is to raise on the same piece of land, a crop of wheat one year, and the next year flax; sowing the flax early, so as to have it out of the way in time for early wheat sowing, and, after the wheat is taken off the stubble and a good stock of clover is turned under by a fall plowing. There are farmers that have pursued this course for twenty years, without exhausting the soil, and always reaping profitable harvests every year, avoiding the loss of every alternate year in summer following, as is usual with most farmers. The flax crop, when sown thin, as is the practice when raising it for the seed, leaves the land in fine condition for almost any other crop, a fact which is not generally known or appreciated.

It is a very common practice to sow barley and flax together, as they mature and are harvested at the same time and can be threshed together, and the two very easily separated with suitable screens in the fan. This practice is meeting with much favor, and is said to be a very profitable method of cultivating both barley and flax seed; indeed some farmers assert that the yield of flax seed is not diminished by the growth of the barley, nor is the yield of barley less on account of the flax seed. But we give these items more for the expectation that every farmer will make tests for himself, than that he will take the statements as settled facts for all kinds of farms in all localities. But nothing can be more certain than that the farmers through the entire West—the length and breadth of the Mississippi Valley can make the cultivation of flax seed a very profitable crop, not second in value to wheat, corn or any other; the seed alway commanding ready sale for cash, at high prices. It is a remarkable fact, that the demand for flax seed has increased for the last year from one to two hundred per cent. The "Patent Press Oil Works" (Latourette & Wyman), of St. Louis, completed and in operation the last year, are capable of consuming one hundred and fifty to two hundred thousand bushels per annum. The proprietors of these works are offering to contract largely, and offering every inducement to farmers to turn their attention more generally to the cultivation of flax seed. The Collier Lead and Oil Works, of this city (H. T. Blow), also consume about as large a quantity of flax seed annually. In addition to this, there have been several Oil Mills erected the past year, within the range of country trading with this city. We subjoin some practical directions for cultivation:

NATURE OF THE SOIL.

Almost all kinds of soil will grow flax seed successfully, especially such as are adapted to wheat. If sown on rich bottom lands, you get a luxuriant growth of straw, but not so much seed as when sown on upland. Clay, hardpan, or sandy lands, are better for a good yield of seed, though rich loam, or prairie lands are good, especially if they are rolling and well drained. It must be borne in mind that a selection with a view to a good crop of seed, is quite different from one for a good crop of fiber—the one requiring a harder, dryer soil, while the other should have a low, rich, moist land. A dry season is favorable to a crop of seed, while a wet season is almost indispensable to a good crop of the fiber.

PREPARING THE GROUND.

The ground for flax seed should be plowed the fall before, and again in the spring, and finely pulverized with a heavy harrow. Thorough, deep plowing, and pulverizing the earth as far as possible, should never be neglected. The seed should be sown broadcast, and should have as light a covering of earth as possible, and to this end, a brush should be used instead of a harrow, so as not to cover the seed too deep. The field should be laid off in furrows or lands, and trenches run with the plow to carry off the surplus water.

TIME OF SOWING.

It may be sown as early in the spring as can be done with safety against frost. Many persons pay no attention to frost, and sow quite early, some even sow it on the snow in February or March, as about nineteen cases in twenty frost does not injure it; but there is a particular stage of the growth of the young sprout, when, if the frost takes it, it will perish, which gives the preference to ordinary spring sowing. If not sown till rather late in the spring, it frequently does not get sufficient growth before the dry weather overtakes it. Therefore, sow late enough to avoid the frost, and early enough to secure early spring rains.

KIND OF SEED.

Particular care should be taken to get large, full, and well matured seed, for sowing. Where the crop has been very thick on the ground, the stalk is pale and weakly, and does not afford sufficient maturity for the berry, and seed from such a crop should always be avoided. The best plan is to have one corner of a field sown on purpose to get seed for sowing the next year, and on this corner, the less seed you can get evenly scattered over the ground, the more vigorous and mature will be the stalks and the seed. There are different varieties of flax seed, and some are preferable to others, for their seed-yielding and oil-producing qualities. But it is so difficult to get any pure species, it is, perhaps, better to disregard varieties, and select seed for its apparent goodness. Always sow pure flax seed, without any mixture of foreign seeds. Too much care cannot be taken on this point. Be particular to riddle out all yellow grass, cockle, mustard, rape, or other seed, and starting with a pure seed, you will have no difficulty with foul stuff, and will always have the greatest yield per acre, and obtain the highest price when you market your seed.

QUANTITY OF SEED.

Much difference of opinion exists in regard to the quantity of seed to be sown per acre, but the probability is that the quantity should be varied according to the condition of the ground, season, etc. The most successful raisers practice very light sowing, some even as low as eight quarts per acre; but a fair average quantity for all farms and all circumstances, is, say from twelve to twenty quarts, when the crop is cultivated exclusively for the seed—thus securing plenty of room for the stalks to stand upon the ground and spread out their branches, and giving the sun access to their roots, and securing strength of earth for nourishment and maturity of the stalk. When sown thin, the stalk branches nearly down to the ground, and each branch is loaded with bowls. When sown thick, the stalks are spindling and weak, and often have but a single berry on the top, and perhaps no seed at all; besides, exhausting the soil to a wonderful rate. A piece of ground that has been burdened with a thick mass of flax fiber is good for nothing for years after. When sown thin for the seed, the fiber is very short and coarse; but in the new linen process, as well as for the paper mills, is quite equal to the fine fiber. In Ireland, where the finest linen is produced, it is not uncommon to see as much as twelve bushels of seed sown to the acre, so that the stalks are little above fine threads, growing up through each other in a dense mass, and producing no seed at all. In Russia, the German States, other portions of Europe, and in India, the quantity of seed sown is regulated more to a view of both seed and fiber, and the quantity ranges from ¼ to 2¾ bushels per acre.

TIME OF HARVESTING.

Flax seed should be cut before it is quite ripe, when the bowls are beginning to pass from the yellow to the brown color, and it is better to let it lay a few hours, if the weather is dry, before it is bound up, so that the seed can fall and ripen from the nutriment remaining in the stalk. If it is left standing till the seed is quite ripe, a large proportion of the seed will be lost in gathering the crop.

MANNER OF GATHERING.

The crop can be cut with the cradle, or in any of the usual modes. After laying in the swath a few hours it should be bound up in bundles and put in stack or barn, secure from the weather. Some farmers mow the crop the same as hay, and handle it in bulk; but the best way is to cradle, rake, and bind in bundles.

TRESHING—TIME AND MODE.

It should be threshed as early in the fall as possible, and in a time of dry weather, for if it lays too long, the seed is apt to adhere to the shell, and is more difficult to thresh and clean up, and for the same reason, it should not be threshed in damp weather.

Any of the usual modes of thrashing wheat or oats, will do for flax seed. When a thrashing machine is used, the cylinder should he of the open kind, *i. e.* with the teeth set in a cross-bar, and an open space between them. The tow is apt to wind around a tight cylinder, but the open cylinder machine will clear itself.

CLEANING UP AND MARKETING.

The seed should be cleaned up on the barn floor, and in still weather. When it is cleaned up in the field, or when the wind is driving dust about, the dust and dirt gets in with the seed, in spite of all efforts to clean it with the fan, causing it to look dull and dusty, and the oil makers will not buy it as prime seed. When it is cleaned up and ready for market, it should be put into new, strong bags; for there is no other seed, or other grain, that will creep out of so small a hole, or that is so likely to burst the bag. If the seed is plum and clean, and your half bushel is correct, you will find that it will more than hold out by weight. The standard weight of a bushel is fifty-six pounds, and you will find that prime seed will go sixty pounds.—[Ky. Valley Farmer.

New Grapes.

We give a list of new grapes, from Hovey's Magazine, Boston, with the opinion of European cultivators, and notes from those who have seen the fruit. We hope, however, that we in California will not depend upon others for new fruit, altogether, but set to work and raise new seedling fruits of all kinds, that shall surpass all others. We can do this in California if we will.

The Barbarossa Grape.—Sometime since we noticed the exhibition of two fine clusters of this grape before the Massachusetts Horticultural Society, from R. S. Rogers, Esq., of Salem. At a late meeting of the British Pomological Society (Nov. 6), a handsome bunch was exhibited, weighing five pounds seven ounces (5 lb. 7 oz). It is a popular and valuable late grape.

The Bowood Muscat Grape.—This is a new variety, raised at Bowood, the seat of the Marquis of Landsdowne, between the Cannon Hall and the Muscat of Alexandria. It differs somewhat from both of its parents; although it is a week or ten days later in breaking in the spring, the fruit ripens rather earlier than the common Muscat. The bunches are broader and shorter; every bloom sets, even in a temperature comparatively low. This is a marked feature, and the bunches are invariably compact, and regular in consequence, and must be well thinned out to allow the berries to attain their full size. The berries are oval; when grown in a light house we find them pear shaped, more than oval, large, and of a bright amber color when ripe. The habit is scarcely so vigorous as that of the common Muscat. It is very productive, there being frequently three and four bunches on a shoot. Such is the account of this variety as grown by Mr. Spencer, the intelligent gardener. To this Mr. R. Thompson, of the London Horticultural Society adds the following:

This is a very fine thing and perfectly distinct. The bunch is very large and well shouldered, with strong footstalks. Berries very large, inclining to obovate, one and a quarter inches long by nine-tenths of an inch in diameter; the skin is greenish yellow, or of the same color as that of the White Muscat of Alexandria, but it was evident that the berries had not acquired the color of complete maturity. The flesh is firm, juicy, with a rich sugary Muscat flavor: Seeds, 2—4. This variety, from its being an abundant bearer, and a free setter, forming magnificent well shouldered bunches, appears to be well deserving of cultivation.

The Editor adds: We have never seen a variety of greater promise. The appearance of the bunch and berries is most magnificent. The quality much the same as that of the Cannon Hall.

With such threefold evidence of the Bowood Muscat, it would appear to be a great acquisition, and destined to replace the Cannon Hall, the noblest of the Muscats, but too uncertain for general cultivation.

Stockwood Golden Hamburgh Grape.—This is another new variety, said to have been raised from the Black Hamburgh, impregnated with the Chasselas or Sweet Water. The growth of the vines resembles the male parent, but the foliage is similar to the Hamburgh, being large, five lobed, with the veins and footstalks tinged with red. The bunches are large, loose, branching and shouldered, varying from six to nine inches long, and the footstalks are short and stout. The berries are large and hang loosely on the bunches, an inch long, seven-eighths of an inch in diameter, and of a uniform oval shape. The berry stalks are long, stout, and considerably warted. Skin thin, tender, of a pale yellow color, but, when fully ripened, of a pale amber. Flesh delicate and melting, very juicy, and remarkably rich and vinous.

Though apparently, from this description, a valuable variety, it is not so remarkable a seedling as the Bowood Muscat. It will be well, however, for our grape growers to give it a trial.

Right Action.

We copy from the Maine Farmer the doings of the Board of Agriculture of Maine, at their late sitting, at Augusta, the capital of the State.

It will be seen that by such action the true value of the agriculture of the State is appreciated. It is understood to be, and is, the chief source of wealth, the basis of all prosperity; and the cause is taken up by her best citizens, and acted upon according to its merits.

Among the names of delegates to this meeting will be found Senators and Representatives, and the best men of the State, and it will also be seen that they have taken the most important items for consideration. Such action it is that advances the State.

If our down-east sister, with her seven months of winter, can thus act for Agriculture, what should be done in California, where nature has been so bountiful? When will California have a Board of Agriculture, to consider her great interests? We commend the following to our Senators and Representatives:

MAINE BOARD OF AGRICULTURE.

The Maine Board of Agriculture met in Agricultural Hall, at the State House, on Wednesday, 21st Jan., and were called to order by the Secretary. Hon. Robert Martin of Androscoggin was nominated as Chairman. The following are the members of the Board:

MEMBERS.

Hon. H. Hamlin, of Hampden, } *ex officio.*
Alden Jackson, Sec. of State, }

SOCIETY.	NAMES.	P. O. ADDRESS.
York,	S. L. Goodale,	Saco.
Oxford,	Darius Forbes,	South Paris.
Cumberland,	E. G. Buxton,	Yarmouth.
Lincoln,	Eben. Cobb,	Union.
Androscoggin,	Robert Martin,	W. Danville.
Sagadahoc,	Chas. J. Gilman,	Brunswick.
Kennebec,	Horace Parlin,	E. Winthrop.
N. Kennebec,	I. W. Britton,	Winslow,*
S. Kennebec,	Nathan Foster,	Gardiner.*
Franklin,	Joseph Keith,	Chesterville.
N. Franklin,	Seward Dill,	Phillips.*
E. Somerset,	Thos. Fuller,	Hartland.
Piscataquis,	C. Chamberlain,	Foxcroft.
Waldo,	T.W.Cunningham,	Belmont.
Penobscot,	E. F. Crane,	Kenduskeag.
N. Penobscot,	Wm. R. Hersey,	Lincoln.*
N. Aroostook,	Joseph D. Pike,	Presque Isle.*
Washington,	Nathan Pettengill,	Pembroke.
Bangor Hort.	Henry Little,	Bangor.*
Maine Pom. and Hort.,	D. A. Fairbanks,	Augusta.*
Penobscot and Aroostook Union,	Morgan Gerry, No. 3, Aroostook.*	

*Not members by statute, but received as honorary.

The Board, finding several gentlemen present chosen by Societies not entitled to a member, it was *Ordered*, That all gentlemen having certificates of election from duly incorporated Societies be invited to take seats at this Board, and aid us with their counsel and advice.

Ordered, That a Committee of three be appointed on each of the following topics:

1. To inquire what amendments, in the present law relating to the Board of Agriculture, are expedient and necessary to secure its highest efficiency. *Committee*—Hamlin, Little, Buxton.

2. To inquire what the Board ought to recommend in relation to the trial of the speed of horses, at our Agricultural Shows.

3. To inquire whether the Board ought to take any action relative to the exhibition of female equestrian skill, at our Agricultural Shows. *Committee*—Crane, Fuller, Parlin.

4. To report on the question as to what is the immediate object to be aimed at, in our legislative and associated action in behalf of agriculture. *Committee*—Forbes, Pettengill, Gerry.

5. To inquire whether it be advisable to recommend any legislative provision, to enable the farmers of the State more easily and at low rates of interest, to obtain capital to invest in their business. *Committee*—Fairbanks, Cobb, Britton.

6. To inquire into the expediency of this Board arranging the time for the usual Shows of the Agricultural Societies, in the State, so that they may not interfere with each other, and recommend the same to the adoption of the several Societies. *Committee*—Britton, Gerry, Goodale.

7. To inquire whether it would be expedient for this Board to recommend to the Legislature the appointment of a special commission, to inquire into the cause or causes which hinder the more rapid settlement of the State lands, and to report on the same to the next Legislature. *Committee*—Little, Dill, Buxton.

8. To consider the bill at the close of the Secretary's report, and commend such action on it as may be deemed necessary and expedient. *Committee*—Jackson, Pettingill, Goodale, Gilman, Forbes.

9. To inquire whether this Board will recommend any action by this Legislature for the encouragement of underdraining and thorough draining of lands in this State. *Committee*—Goodale, Little, Hersey.

10. To inquire whether any legislation is necessary to secure more complete and perfect agricultural statistics of this State. *Committee*—Chamberlain, Keith, Buxton.

The Best Profession.

There are many young men of earnest and noble purpose who are asking themselves the question, what is the best profession? There are many parents who have sons of promise, who are seeking an answer to the same inquiry. We propose to address a few words to such on the subject in which they are so much interested.

It is well that they are interested in this inquiry, for a profession is generally a life business. It is at once an occupation, a field of usefulness, and a school of culture. It is more than a question of food and raiment—it is a question of character, standing and usefulness! A man's life, be it good or bad, is made in his profession. The profession often makes the man; not because the profession is intrinsically so important; but because it is adapted to the man's mental characteristics. What is the best profession for one man is not always for another. One may do well in the law, and fail elsewhere. Another may succeed nobly on the farm and make poor headway in other pursuits. Another may be very useful in the ministry, and be of little service in any other calling. Another may make his name great and his life a blessing in a machine shop, who would make a poor figure anywhere else. So it is; men differ as well as professions. The first question is, what am I best adapted to? What is my son made for? It is vain to put a natural born farmer into the pulpit or the bar. It is suicidal to put a fine mercantile ability into a blacksmith's shop, or a genuine blacksmith at a jeweler's bench. Almost every boy has a peculiar adaptedness to some calling. Much as we honor the profession of Agriculture, we know many men make a sorry job of it, because they were made for something else. There is bad farming, as well as bad preaching and bad pleading. So there is bad mechanism and merchandising. And much of all bad work in all professions is done by men who are out of their places. Many a minister ought to be a farmer; many a lawyer ought to be a mechanic; many a farmer ought to be in some other profession. It is a great thing to get in the right place, and the first thing to be aimed at.

But still the question is unanswered, what is the best profession? or what profession is best for the greatest number? There is undoubtedly some one calling better than any other; some one which on the whole answers the great ends of life better than any other. We say, undoubtedly, that one is the farmer's.

It is best, in the first place, because it suits the greatest number; is best adapted to the general tastes and abilities of mankind; is best because it combines mechanical and mercantile operations with its own; is best because it supplies the leading wants of families and society; is best because it is surest and safest; is best because it is most essential and must always be the chief pursuit of man; is best because it is healthiest, and affords the best physical school for our bodily powers; is best because it is the most independent and confers the most peace; is best because it confers the most solid blessings upon a country, is, in a word, the grand source of national wealth, virtue and prosperity; is best because it is most favorable to liberty, virtue and good will among men.

We do not contend that in the present state of society agriculture is the best profession for everybody, but best for the greatest numbers; is best for the most purposes; and for the most substantial reasons.

We wish to say much more upon the general subject in the course of the present volume, and call attention to it now chiefly to introduce the subject and awaken thought.—[Valley Farmer.

Artesian Wells in Paris.

The construction of Artesian wells in the Bois de Boulogne, spoken of in a previous number, is progressing with activity. The boring is now carried down 435 meters, and it is hoped to reach by the end of October a depth from which the water will rise.

No difference has yet been experienced in the nature and thickness of the earth pierced by the auger and that which it was necessary to pierce for the establishment of the Artesian well of Grenelle. It is known that the section of the wells at Passy will be 60 centimeters in diameter throughout its depth, and that it will be sunk at least 25 metres in the humid bed of greensand that lies at an average of 550 meters below the plain of Passy.

The boring is much easier at Passy than at Grenelle. The construction of the latter well continued through seven years; and it was several times abandoned because of discouragement. Arago and Hericart de Thury by urgency secured the resuming of the works which it is well known were crowned with success, a jet of water having been obtained rising 28 metres above the soil.

When the well at Passy shall be finished its sides will be supported by an oak lining forming a *tube de retenue;* such tubes have previously been of iron.

Unexpected accidents sometimes impede work. For some months the boring machine was occupied, at a depth of 366 meters in a mass of gray sandstone, where the resistance was so great that a part of the instrument weighing 50 kilograms rested in the rock. It was proposed to extricate it by means of powerful electro-magnets, but it appears that the German laborers employed in the work opposed this experiment so decidedly that there was no other resource than to break the piece of iron by the chisel. Thirty-three days were spent on this tedious task. The pieces of apparatus are now arranged in order among the specimens of strata successively traversed, making a very interesting collection.

Artificial Milk.—For some time a liquid has been prepared which is said to have so far the qualities of milk that it is called artificial milk or "lait-viande." It is prepared as follows. Into a Papin's digester three kilograms of fresh pounded bones are put and one kilogram of meat, with five or six times as much of water. The top is hermetically closed; double sides surround it, and in the cavity between, a current of steam circulates which raises the temperature of the digester up to 140° F. At the end of forty minutes after reaching this temperature, a stop-cock with a small orifice is opened which lets out a vapor having the odor of broth; but some seconds after, there issues a white liquid which is nothing but the artificial milk. After this milk has passed out, the digester contains only the meat, the boiled bones, and a soup of inferior quality. The artificial milk resembles milk in color, consistence, odor, and even taste. But in composition it is different; for it is only an emulsion produced by the fat mixed with the water by means of the gelatine. Although the name artificial milk is not proper, it has some nutritious qualities, and for this reason it is now under trial at the hospitals of Paris.

Universal Exhibition of Photography.—In a recent exhibition in Belgium for the encouragement of the useful arts, a large part was devoted to photography. Many of the objects had already been exhibited at Paris; but there were some novelties. Heliographic engraving, brought out but yesterday, has already attained great perfection, judging from the specimens exhibited by Mr. Riffaut as well as Mr. Negre. Fine photolithographic views were exhibited by Mr. Poiterin and Dr. Harles, the latter after a process of his own invention.

Among the photographic objectives on exhibition, those of Mr. Jamin, of Paris, deserve special mention. There was one of 14 inches which would answer for obtaining pictures 1 6 meters to 1-2. There was a portrait taken on a glass 60 centimeters by 80, with a double objective of 22 centimeters diameter. The objective was furnished with a conical centralizer.—[Silliman's Journal.

To tell Good Eggs.—If you desire to be certain that your eggs are good and fresh, put them in water; if the buts turn up they are not fresh. This is an infallible rule to distinguish a good egg from a bad one

Disease among Horses.

A disease somewhat resembling that prevailing in Boston and New York, and described by Dr. Dadd, in the monthly New England Farmer for February, 1856, lately broke out in a stable of nine horses in this neighborhood, and so rapid were its ravages, that four of the nine died in forty-eight hours from its discovery.

An experienced farrier was called the second morning after the disease broke out, who recommended as a preventive a plug of tobacco nailed to the manger before each horse, he stating that he had known it a successful preventive when the black tongue was prevalent among horses.

The recommendation was carried out, and a week from its adoption there has been no new case of the disease.

We make the disclosures with the impression that if the tobacco is a preventive it should be known. If it is not, in all cases, it is a cheap and simple operation; try it, and it can do no harm.—[W. Bacon, in N. E. Farmer.

Destruction of Rats.—Before storing crops, destroy the rats about your premises. The following recipes may be recommended:

1. A correspondent of the Mark Lane Express suggests the following plan for the destruction of these vermin: Feed them with flour and a few sweet almonds bruised, and mix with a small quantity of molasses to form a paste, together with a few drops of aniseed, for five or six nights, until they take it freely, never laying more of the mixture than they will eat up clean; then add a tea-spoonful of carbonate of barytes to about a pound of the paste. By using the above composition, the correspondent of the Mark Lane Express says that he kept his premises clear of rats, at a small expense a year.

2. Place fresh fish in the place of their resort for several nights in succession; and when you find they consume them freely, sprinkle arsenic over the fish. Rats are passionately fond of fresh fish, readily eat them, while the poison will speedily give them their quietus.

Coffee as a Deodoriser.—Now that the "sporting season" has again come in, we beg to remind sportsmen and others, that fresh ground coffee is a perfect and safe deodoriser; a sprinkling will keep game fresh and sweet for several days. Clean your game—that is wipe off the blood—cover the wounded parts with absorbent paper, wrap up the heads, and then sprinkle ground coffee over and amongst the feathers or fur, as the case may be; pack up carefully, and the game will be preserved fresh and sweet in the most unfavorable weather. Game sent open and loose cannot, of course, be treated in this manner; but all game packed in boxes or hampers may be deodorised as described. A tea-spoonful of coffee is enough for a brace of birds, and in this proportion for more or larger game. Fresh ground coffee may be used with advantage in a sick room; a few spoonsful spread and exposed on a plate, and burned by a red hot iron, is a safe fumigator. —[Builder.

Turtle Soup without a Turtle.

Dear Sir: I notice your appeal in the Soil of the South to house-keepers, to come to your aid in making a good Family Paper. As a housekeeper of some little experience, I am willing to give my mite. So I will just tell your readers how to make a first rate turtle soup without a turtle—we call it at home *piney woods turtle soup.*

Take the head of a kid, lamb or calf, that has been carefully cleaned. If they are young, the skin should not be taken off, but the hair removed by holding it in hot ley water. Put one of these into a pot of cold water early in the morning, and start it to boiling. Tie in a clean cloth a tea spoonful of allspice and ten cloves, and drop *into* the pot. Cut into small pieces one carrot and two medium sized turnips, and drop in.

Keep the pot boiling continually, and as the water evaporates, fill up with boiling water. When the head is done so well that the bones part easily from the flesh, take it out into a tray, pick the bones carefully out, and chop the meat fine. Strain the liquid through a collender, and turn the chopped meat back into the liquid; now salt and pepper to taste, and thicken with flour that has been parched to a deep coffee color; stir it frequently, that it does not burn, and just before it is taken off, add one gill of good tomato, or any other catsup, and a half pint of pure home made wine (such as every house-keeper should make). Now serve up on the table, and if any of your sea-shore readers can tell this from the finny turtle, I will give up that I have any knowledge of house-keeping.—[Boadecia, in Cotton Planter

To take Stains out of Linen.—Stains caused by acids can be removed by wetting the part and laying on it some salt of wormwood; then rub without diluting it with more water. Or, tie up in the stained part some pearlash, then scrape some soap into cold soft water to make a lather, and boil the linen till the stains disappear. Recent stains of fruit may be removed by holding linen tightly stretched over a tub and pouring hot water over the part. This may be done before any soap has been applied to it. A soon as the stain is made on table linen, &c., rub on it common table salt, before it has had time to dry. The salt will keep it damp till the cloth is washed, when the stain will disappear; or, wash the stain lightly when the cloth is removed.

Simple Cure for Croup.—We find in the Journal of Health the following simple remedy for this dangerous disease. Those who have passed nights of great agony, at the bedside of loved children, will treasure it up as an invaluable piece of information. If a child is taken with croup, instantly apply cold water, ice water if possible, suddenly and freely to the neck and chest with a sponge. The breathing will almost instantly be relieved. As soon as possible let the sufferer drink as much as it can; then wipe it dry, cover it up warm, and soon a quiet slumber will relieve the parents anxiety, and lead the heart in thankfulness to the Power which has given to the pure gushing fountain such medical qualities.

Creosote for Warts.—Dr. Rainey, of St. Thomas's Hospital, London, has written an article to the Lancet, detailing the effects of creosote applied to warts. He applied it freely to an obstinate warty excrescence on the finger, then covered it over with a piece of sticking plaster. This course he pursued every three days for three weeks, when the wart was found to have disappeared, leaving the part beneath it quite healthy. Tqis is certainly a remedy which can be easily applied by any person.

To Cure Felons.—Within the past year we have known the spinal marrow of an ox or cow applied by three different persons, with the most satisfactory results, in relieving the pain and securing speedy cures of their felons. This we are sure will be useful information to many. The spinal marrow should be applied fresh every four hours for two days.—[Ex.

SMILES AND KIND WORDS.

When the heart is dejected,
And pleasure is flown.
And passed the bright moments
So fondly our own—,
And stilled in the music
Of nature and birds,
How sweet to the bosom
Are smiles and kind words!

The fond heart is breaking
In burning despair—
While clothed in broad sackcloth
Are skies that were fair;
O, save, ere it perish
The sorrowful mind,
By smiles that are pleasant
And words that are kind.

I've been to the palace
Of the rich and the gay—
Where the sirens of pleasure
Chase sorrow away;
But never, O never,
Such joy have I seen,
As gush from the bosom
Where kind words have been.

[For the California Farmer.]

POPULAR EDUCATION.

Conventions and Institutes.

LETTER NO. IV.

"Men cannot propose a higher or holier object of study, than education and all that appertains to education."

EDITORS FARMER: A committee was appointed by the last State Teachers' Convention, for the performance of certain specified duties. One of the most important of those duties was to be the presentation to the Legislature of a petition from said convention, asking aid for a Teacher's Institute, which it was resolved should hold its first session during the coming summer.

Now, can you inform me what this committee has done? Has it said a word to the Legislature? Has it pointed out any of the imperfections and wants of the school system? which was also one of its duties. If so, will it communicate with the Institute committee, that they may know how to act? But, sirs, I surmise they have forgotten that there was ever such a body as the Benicia Convention; and that their evanescent zeal in the cause has dwindled away with their memory. Some of the members of that committee were very active in the convention, in informing us how imperfect the present system of education is, and how many amendments might be suggested to the school laws; yet, now that they have been intrusted with that very duty, they have not a word to say.

We have had two State Teachers' Conventions in this State, and all who have attended them will acknowledge that their results have not met their expectations. In both cases teachers have gone away feeling that they have wasted their own time, and the encouragement of the public. This will continue to be the case so long as conventions are called for so short a time as three days. There will be no regular order of procedure, because every one will feel that it is impossible to accomplish anything in so short a time; and the result will be, as it has been, the expression of a few ideas among a host of words, an opportunity to certain classes of persons who are ever ready to make speeches on all subjects; but who can add to none. Imagine that teachers' conventions were not instituted for the purpose of making teachers a listening audience to be admonished as to their duty by any lawyer, doctor or preacher, who may happen to be gifted by an active tongue and a large development of self-admiration; or to listen to the jangling of county superintendents in their discussions as to the best means of carrying out the intentions of the law. Why, sirs, I have been told within a few days, by one who should be the best authority in the State, that school conventions should consist of county superintendents and the State superintendent. I think the gentleman is right, if they are to be conducted as the passed two have been.

Elevate the teacher and he will elevate the schools, was the principle on which Mann, Barnard and Page founded their exertions for the establishment of teachers' conventions and normal schools; and those who are acquainted with the effects of these institutions will not question the soundness of the aphorism. The State superintendent and county superintendents, however great be their abilities, can accomplish nothing with poor teachers, while a corps of able teachers will leave them nothing to attend but their clerkships.

The objects to be obtained by teachers' conventions, are, firstly, improvement of the teacher; secondly, similarity in the methods of teaching; thirdly, the selection of the best text books. That these ends are desirable, and that they are best attained through associations I think is self-evident, and shall therefore say but a word on each point.

The improvement of the teacher should be three-fold: pure acquisitions, methods of imparting those acquisitions, and methods of government. The first of these three may be, to a certain extent, obtained at school, but there is a practical knowledge which can only be obtained by association; that knowledge which changes the book-worm into the accomplished man, the theoretician into the practician, which gives life, vigor and application to learning; but in methods of imparting and of discipline, which are the great points that distinguish the mere scholar from the teacher, I know of no means of improvement so good as that afforded by Institutes. Discussion is to the teacher what competition is to the tradesman or mechanic. It wakens him up, sharpens his wits, gives him an opportunity of comparing his thoughts with others; in fact, is the glass in which he can view himself, perfections and imperfections, and adjust his garments accordingly.

Saturday classes, for the benefit of teachers, have been established in most of the villages of the State of New York, with the most satisfactory results. The county Institutes in connection with the State Normal School, produced an entire revolution in the old system of instruction; but with improvement came increased wants, which led to the Saturday classes; and the teacher finds it there, at the present day, as necessary to exert himself to keep up with the age, as does the scholar to keep up with the school.

Saturday classes are only practicable in cities or villages, and in our State, county Institutes, in most cases, are equally impracticable. Hence the greater necessity for the establishment of a State Institute, where teachers may better prepare themselves for their duties; where they may learn to assimilate in their methods of teaching, and where they may agree upon a series of text books, and perhaps on a course of study. No State Board of Education or Superintendent of Public Instruction is likely to be so well able to recommend a good series of text books, or to fix upon a proper course of study, to be pursued in our Common Schools, as such a body.

I trust our Legislature will this winter appropriate the small sum petitioned for by the Benicia Convention. The sum, fifteen hundred dollars, is small, and will barely suffice to engage competent teachers and lecturers. To parents, I would say, that I believe you will be the gainers, in the increased zeal and ability of your teachers, by giving them the time to attend such an Institute, and allowing them their salaries during such time.

Respectfully, yours, OMEGA.

Adventure in the Arctic Regions.

THE readers of Kane's narrative of his recent Arctic expedition could hardly have failed to read the following passage with almost breathless interest, so completely were the lives of Kane and his men dependent upon the sequel. We copy it for the benefit of our readers who have not read the work, with the remark that it describes a scene which transpired after the explorers had abandoned their vessel, and were making a desperate, and, as it must have appeared to them at the time, almost hopeless attempt to reach a civilized spot, where they could obtain that aid in the shape of food, rest and sleep, which was so necessary to their existence. They were upon short allowance of food, and were almost famished, with still a long journey before them:

"Things grew worse and worse with us; the old difficulty of breathing came back again and our feet swelled to such an extent that we were obliged to cut open our canvas boots. But the symptom which gave the most uneasiness was our inability to sleep. A form of low fever which hung by us when at work had been kept down by the thoroughness of our daily rest; all my hopes of sleep were in the refreshing influence of the halt.

It must be remembered that we were now in the open bay, in the full line of the great ice-drift of the Atlantic, and in boats so frail and unseaworthy as to require constant bailing to keep them afloat.

It was at this crisis of our fortunes that we saw a large seal floating—as is the custom of those animals—on a small patch of ice, and seemingly asleep. It was an *asnuk* (seal), and so large large that I at first mistook it for a *walrus*. Signal was made for the Hope to fall astern, and, trembling with anxiety, we prepared to crawl down upon him.

Peterson with the large English rifle, was stationed in the bow, and stockings were drawn over the oars as mufflers. As we neared the animal, our excitement became so intense that our men could hardly keep stroke. I had a set of signals for such occasions, which spared us the noise of the voice; and when about three hundred yards off, the oars were taken in, and we moved on in deep silence with a single scull astern.

He was not asleep, for he reared his head when we were almost in rifle shot; and to this day I can remember the hard, care worn, almost despairing expression of the men's thin faces as they saw him move; their lives depended on his capture.

I depressed my hand nervously, as a signal for Peterson to fire. McGary hung upon his oar, and the boat, slowly but noiselessly sagging ahead, seemed to be within certain range. Looking at Peterson, I saw that the poor fellow was paralyzed by his anxiety, trying vainly to obtain a rest for his gun against the cutwater of the boat. The seal rose on his fore-flippers, gazed at us for a moment with frightened curiosity, and coiled himself for a plunge. At that instant, simultaneously with the crack of our rifle, he relaxed his long length on the ice, and at the very brink of the water his head fell helpless to one side.

I would have ordered another shot, but no discipline could have controlled the men. With a wild yell, each vociferating according to his own impulse, they urged the boat upon the floes. A crowd of hands seized the seal and bore him up to safer ice. The men seemed half crazy; I had not realized how much we were reduced by absolute famine. They ran over the floe, crying and laughing and brandishing their knives. It was not five minutes before every man was sucking his bloody fingers, or mouthing long strips of raw blubber.

Not an ounce of this seal was lost. The intestines found their way into the soup kettles without any observance of the preliminary home-process. The cartilaginous parts of the fore-flippers were cut off in the melee, and passed round to be chewed upon; and even the liver, warm and raw as it was, bid fair to be eaten before it had seen the pot. That night, on the large halting-floe, to which in contempt of the dangers of drifting, we happy men had hauled our boats, two entire planks of the Red Eric were devoted to a grand cooking-fire, and we enjoyed a raw and savage feast."

THE BOY FOR THE TIMES.—We like an active boy, says the Southern Organ, one who has the impulse of the age—the steam engine—in him. A lazy, plodding, snail-paced chap might have got along in the world fifty years ago, but he wont do for these times. We live in an age of quick ideas; men think quickly, speak quickly, eat, sleep, court, marry and die quickly, and slow coaches are not tolerated. "Go ahead, if you burst your boiler," is the motto of the age; and he succeeds the best in every line of business who has the most of do or die in him. Strive, boys, to catch the spirit of the times; be up and dressed always, not gaping and rubbing your eyes as if you were fast asleep, but wide awake, whatever may turn up, and you may be somebody before you die. Think, plan, reflect, as much as you please before you act, but think quickly and closely, and when you have fixed your eyes upon an object, spring to the mark at once. But above all things, be honest. If you intend to be an artist carve it in the wood, chisel it in the marble; if a merchant, write in your day book and spread it in capitals in your ledger. Let honesty of purpose be your guiding star.

Riches and Intellectuality.

THE acquisition of wealth and the pursuit of knowledge are incompatible with each other. We mean wealth in its modern, practical, worldly sense, and knowledge in the sense of general philosophy and universal truth. What is usually called a "knowledge of the world," is harmonious with, and is, indeed, an indispensable agency in the successful accumulation of property. But he who devotes his principal energies of mind and body to this calling, cannot give much attention to cultivating the fields of literature, or exploring the depths of science, thereby developing new and useful truths for the benefit of mankind. Nor can the man, whose best faculties of heart and soul are engrossed in deducing from the arcana of nature, the principles of philosophy, the proper rules of life, the laws of eternal right, and the elements of human progress, at the same time enter into the sordid strife of the merely worldly minded, for riches, houses, lands, estates, and hoarded gold, with any reasonable hope of success.

The intellectual man, who aims at a competency only, in this world's treasures, may succeed. He may obtain possession of all he can enjoy; in fact, the true philosopher of nature cannot enjoy property only as it is a means of future usefulness and deeper research. It is often regretted that intellectual men, men whose whole souls seem to be consecrated to the acquisition and promulgation of knowledge in the world, are not *easy*, as it is called, in their pecuniary circumstances. Little, perhaps, do those who so kindly wish them well, think how soon easy circumstances, wealth, luxury, with their sequences, indolence and sensuality, would clog the active machinery of their minds, and render them useless to themselves and to society.

The rich man, whose mind is an uncultivated waste, has his own peculiar pleasures; but they are mainly artificial, fictitious or sensual. He has no well-spring of happiness within, no source of constant and abiding joy which external circumstances, though they may add something to, or abstract a little from the sum total, can never "give or take away." What poor educated man, how poor soever, would exchange his treasures of mind for the wealth of the world, provided that wealth was encumbered with ignorance, of all science except the poor one of getting more? The man who has once drank deep of the fountain of learning, who has brought the propensities of his mind into subjection to the moral sentiments and the mental faculties, and these in communion with all the departments of Nature herself, would treat with ineffable disdain, all offers to purchase his wealth of mind, provided the thing was possible. He might love wealth, he might desire property, he might occasionally covet riches, but if they were placed in antagonism to his acquisitions of knowledge, he would spurn them as "nothing worth."

A PROPHECY OF 1819.

THE name of Commonwealth is past and gone,
O'er the three fractions of the groaning globe;
Venice is crushed, and Holland deigns to own
A sceptre, and endures the purple robe.
If the free Switzer yet bestrides alone
His chainless mountains, 'tis but for a time,
For tyranny of late is cunning grown,
And in its own good season tramples down
The sparkles of our ashes.—[Byron's Ode to Venice.

PROSPECTUS
OF
VOLUME VII.
OF THE
CALIFORNIA FARMER.

THE CALIFORNIA FARMER was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer FARMER expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our desert at their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the CALIFORNIA FARMER.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the TRUE friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artizans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it in comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal.

The terms of the FARMER are, for the year (always in advance), $5

Offices of Publication—130 Washington street, San Francisco, and State Society's Rooms, Fourth street, Sacramento. WARREN & CO., Editors and Publishers.

January, 1857. 4 tf

HORTICULTURAL.

Commercial Nursery,

Three-Quarters of a Mile East of the City of San Jose.

THE Proprietors of this Nursery, having received the award of the FIRST PREMIUM OF THE STATE SOCIETY the present year, have the pleasure of announcing to their customers, dealers and others, that they have now on their grounds the largest and most complete assortment of FRUIT AND ORNAMENTAL TREES, *For the Trade of 1856 and 1857*, that have ever been offered in the State, and which, for size, vigor of growth, health and beauty, cannot be excelled.

Our Stock consists of

One Hundred Thousand Trees,

FROM FOUR TO ELEVEN FEET IN HIGHT.

Apples, 80 best varieties;
Pears, 25 "
Cherries, 22 "
Peaches, 30 "
Apricots, Nectarines, Figs,
Gooseberries, Raspberries, Strawberries;
TOGETHER WITH
Shade and Ornamental Trees;
Rose Bushes and Flowering Shrubs, &c., &c.

Our original stock was imported from the most celebrated Nurseries in the Eastern States, and we avail ourselves of every opportunity of obtaining all new and valuable varieties worthy of cultivation.

Many of our standard Trees have fruited the present season, and have invariably been found correct; and all Trees sold by us will be warranted to be true to name. It is important that orders should be sent in early, as they will be filled in the order in which they are received, and should state distinctly how they are to be marked and how directed. We can forward by Wells, Fargo & Co., and Pacific Express, or by California Steam Navigation Company, as purchasers may direct.

Our terms are *Cash* and all remittances to be sent by either of the above Express Companies.

Catalogues can be obtained at the Nursery, or mailed to to those who desire them. Any information desired will be freely given; and all orders left to our own selection we shall endeavor to fill to the satisfaction of the purchaser.

☞ Our Agents are as follows: Lecount & Hill, San Francisco; Ross & Norcross, Sacramento; A. G. Brown, Stockton.

All communications addressed to the subscribers will receive prompt attention.

v7-1 3m SMITH & WINCHELL.

Smith's Pomological Gardens
AND
NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast.

Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—1,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

* Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.

v6-19 3m A. P. S.

San Jose Nursery.

THE Proprietor of this large and well known Nursery has ready for market the present season a large and valuable assortment of

FRUIT AND ORNAMENTAL TREES,
ROSES, CLIMBING PLANTS, GARDEN SEEDS, &c.

Apples, 112 varieties, all best kinds;
Pears, 97 " very select;
Peaches, 69 " all approved;
Cherries, 25 " fully tested;
Plums, 27 " very best.

The collection of Grapes includes the best Foreign and American varieties, approved by the highest standard, and we offer

Grapes, 32 varieties;
Almonds, Quinces, Figs, Pomegranates,
Raspberries, Gooseberries, Currants, Strawberries.

In each of the above the very best and most approved varieties.

The Proprietor would also offer an extensive assortment of Ornamental Trees, such as—

Black and Honey Locust;
Chinese Ailanthus, Catalpas.

—Also,—

26,000 Mulberry Trees,

All the best kinds for the feeding of the Silk Worm. These are worthy the special attention of our citizens generally.

ROSES! ROSES!! ROSES!!!

In this department the Proprietor is happy to offer a collection of 17,000 Roses of large sizes, and embracing 96 varieties, certainly the best collection in the country, and including the newest and rarest varieties. The Roses from this Nursery received the First Premium of the California State Agricultural Society the present year, as exhibited at the Great Fair in this city.

The Proprietor will send his Catalogue, gratis, to every applicant. The catalogue contains the description and price of all the varieties of Fruit, Ornamental Trees, Shrubbery, &c., cultivated in the Nursery.

Every order will receive prompt attention. Trees, &c., will be carefully packed and sent to any place directed.

Address letters to L. PREVOST,
San Jose City.

San Jose City, Oct. 16, 1856, v6-13 4m

The French Garden,

Near the Cottage, on the Santa Clara Road.

A. DELMAS,.....PROPRIETOR.

GRAPE VINES! GRAPE VINES!!

THE Proprietor of these extensive grounds would take pleasure in calling the attention of the public to the very great collection of Grape Vines, which he will offer the present season.

The Fruit from this Garden was exhibited at the late State Fair, and received the Diploma of the Society. The White Wine made from this Vineyard received the First Premium of the State Society. This Vineyard also obtained the First Premium for the Best Vineyard of Foreign Grapes, the present year.

The Proprietor will offer the present season his grand collection of Eighty One Varieties. Among this splendid assortment will be found—

Black Hamburg;
Chasselas of Fontainbleau;
Chasselas of Frontignac;
Cannon Hall Muscat;
Muscat of Alexandria;
Charlesworth's Tokay;
Syrian; Black July;
Golden Chasselas;

Together with every variety of the Grape known and approved.

The undersigned is confident that this collection is the largest and most complete in the country, and to this the attention of the public is particularly invited.

The subscriber would also offer—

APPLE, PEAR, PLUM, PEACH, APRICOT, NECTARINE, and other Fruit Trees.

—Also,—

RASPBERRY, CURRANT AND GOOSEBERRY TREES, In good assortment.

Catalogues of all the varieties grown in this Garden will be sent to all who desire them, by addressing letters to the proprietor.

All orders will be answered promptly, and Trees and Vines carefully packed for any place in the country.

A. DELMAS,
v6-13 4m French Gardens, San Jose.

Peach Trees! Peach Trees!!

20,000 fine Peach Trees of one year's growth;
50,000 Dormant Buds, consisting of *thirty varieties*;
PEAR, APPLE, PLUM and CHERRY TREES, of very best quality;
GRAPE VINES, extra quality;

Nurserymen and Tree Dealers supplied at liberal discount from regular prices.

Purchasers are invited to call at the Nursery of the subscriber before purchasing elsewhere.

The Mathematical Works of Professor Davies are too well known to require special notice. They are the text-books (in connection with those of Professors Church and Bartlett) of the United States Military Academy at West Point, and nearly all the colleges in the United States. The elementary Course of Mathematics, consisting of the revised editions of Arithmetics, Algebra, Geometries, &c., and recommended by the superintendents of public instruction of Michigan, Illinois, Missouri, Wisconsin, Minnesota and North Carolina, and are used in the best schools and academies throughout the United States. Clark's English Grammar, Willard's School Histories, Parker's School Philosophy, Fulton and Eastman's Book-keeping, and Monteith's and McNally's School Geographies are also the favorite books in each of the above named States, as well as in all parts of the country where they are used. v7-1 2m

Important New Works,

JUST PUBLISHED BY

D. APPLETON & CO.,

346 and 348 Broadway, New York.

I.

THE HILLS OF THE SHATEMUC. By the author of "The Wide, Wide World." 1 vol., 12mo., cloth, $1 25.

The popularity of this work bids fair to more than equal the former work by this talented author.

II.

COMMODORE PERRY'S JAPAN EXPEDITION—Executed at the command of the American Government. Written out from the Journals of the Commodore and his Officers. By Francis L. Hawks, D. D. 1 volume, 8vo., with upwards of 200 Engravings. Price in cloth $5 00; ½mo., $6 00; full calf, $7 00; full morocco, $8 00.

This book, containing as it does, the record of one of the most brilliant National Expeditions ever undertaken, and illustrated by such varied illustrations, will become a standard volume for libraries. It is as interesting as a novel.

III.

A MEMORIAL VOLUME TO BISHOP WAINWRIGHT. Containing Thirty-six Sermons and a Memoir, by the Bishop of New Jersey. 1 volume, 8vo., with Portrait. Price $2 50.

IV.

MEMORIALS OF HIS TIME. By Lord Cockburne. 1 vol., 12mo. $1 25.

This volume presents to the reader a most graphic description of Society as it existed in Edinburgh towards the close of the last century.

V.

ELEMENTS OF MORAL PHILOSOPHY; Analytical, Synthetical and Practical. By Hubbard Winslow, author of Intellectual Philosophy. 1 vol., 12mo. $1 25.

VI.

PROGRESSIVE SPANISH READER; with an Analytical Study of the Spanish Language. By Augustin Jose Morales, A. M. and H. M. 1 vol., 12mo. $1 00.

VII.

MANDEVILLE'S NEW SERIES. THE FIFTH READER for Common Schools and Academies. By Rev. Henry Mandeville, D. D. 1 vol., 12mo. $1 00.

VIII.

CORNELL'S HIGH SCHOOL GEOGRAPHY; Forming Part Third of a Systematic Series of School Geographies, comprising a Description of the World; arranged with Special Reference to the Wants and Capacities of Pupils in the Senior Classes of Public and Private Schools. Embellished by numerous Engravings, and accompanied by a large and complete Atlas, drawn and engraved expressly for this work. By S. S. Cornell. $1 50.

The California Farmer.

SAN FRANCISCO, FRIDAY, MARCH 6, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

TO OUR READERS AND CORRESPONDENTS. We ask the attention of our readers to the valuable communication of "Agricola," in our columns this week.

"Omega," upon Popular Education, should receive the particular attention of all who should be interested on Education.

Other subjects of interest in our present number, and especially numerous advertisements of importance, are worthy of notice by our readers.

Quartz Mining, deserves special notice. See notice in editorial matter.

We are very grateful to those friends that so kindly interest themselves in favor of our journal. We do truly appreciate it, and hope to make our journal deservedly popular for the family, as well as a scientific journal. We have considerable written material on agricultural matters, which shall have due notice.

"Alice" is most welcome again, and will appear next Number. Other valuable favors shall receive due care and attention.

Smith's Gardens, Sacramento.

BEAUTIFUL SHOW OF CAMELLIAS.

THE rapid increase in the growth of the city of Sacramento, and the very great improvement around the city, the large number of beautiful cottages, splendid mansions, flourishing gardens, with other substantial improvements, furnish the best evidence of the prosperity of the Levee City; and if the unfortunate difficulty now existing in relation to the land titles could be removed, the real estate of that city, in all the suburbs, would double in value, for no one that has seen these improvements can for a moment doubt of the future wealth, prosperity and greatness of the City of the Plains. Sacramento possesses one grand feature over all other cities, i. e., her central position in connection with the great mining regions, and the almost certainty that this valley will eventually be the great central depot of all railroad enterprises. We could add to this, that she possesses very great advantages in her climate and soil over many of our large cities. But we have departed from our floral theme—we were about to speak of one of the finest spots of this great valley—Smith's Pomological Gardens.

Our object in speaking of these splendid gardens, at this time, is not so much to notice the gardens as to present to our readers a beautiful spot, worthy their special notice, which should they fail to see, would indeed be a loss to them; and as it is but a little distance from the city, and affords so pleasant a ride, we feel called upon to direct public attention to this most interesting place.

Smith's Garden was commenced in 1851, as a market garden only, but as the proprietor became aware of the nature and qualities of the soil, and its capabilities, the grounds were steadily improved. The first fruit trees were planted in 1852, and some varieties of flowers planted around the house. Such was the rapid growth of the trees, and the developing beauty of the flowers, that the grounds soon assumed the name and appearance of a flower garden. From that time to the present the word has been, progress. No pains or expense has been spared to make it the very best garden in the Sacramento valley. What it now is we can premise to our readers, when we say that the sales from these grounds, the past year, would approximate to the pretty little sum of *Sixty thousand dollars.*

We shall now briefly tell our readers only a part of what we saw the last week, and reserve for another time a portion of the detail. The present grounds comprise fifty acres. The larger portion is laid out in the orchards, embracing all the very best varieties of fruits known, and we venture to say there is no equal in California to these grounds, and no orchard that can surpass it in variety, quality of fruit, beauty of form, or healthiness of the trees. By the present appearance of the trees, just breaking into bloom, the crop of the present year will be without a parallel. The peach, pear and apricot were bursting into bloom, the last week, and now the magnificence of this peach orchard, comprising thirty acres in full bloom, is worth a ride of an hundred miles to see.

The nursery trees of some ten or fifteen acres that were thickly planted have been readily sold at full prices; thus showing that good trees will always sell at the nursery. In addition to these departments, Mr. Smith has equal to *half a mile* of hot-beds, for raising early cucumbers, lettuce, and other sallads, which we saw in high perfection. Cucumbers, at this season, a foot long, and worth $3 to $6 per doz. From these we pass to the flower garden, laid out in beautiful taste, and surrounded with that splendid Escalonia Hedge, to which the first premium of the State Society was awarded. In the flower grounds are beautiful arbors, and fancy retreats, to add to its charms, and to these we add the fine ranges of greenhouses and forcing houses that add so much to the beauty of the grounds, two fine houses for plants, well stocked, and the present year a new and very tasteful Span-roof Conservatory has been erected, and of an ornamental character, which gives quite a picturesque appearance to these grounds.

Neither our time or space will allow us to enumerate all the fine plants that fill these handsome houses. Suffice it to say, that they number many thousands, and there are many gems of the first water. The collection of roses, geraniums, and other plants is abundant, and the Camellia House truly magnificent. Here are more than forty varieties of camellias in perfect bloom, presenting the most magnificent sight we have seen in California. It was a sight worthy the Goddess Flora herself, and as we advanced we could see the beautiful creature peering among the shining petals, with an approving smile upon our friend Smith, in token of her admiration of his efforts in her behalf.

In addition to all these improvements Mr. Smith has built a very chaste and comfortable cottage, in style an Italian Gothic, and standing as it does upon the very banks of the now full and rapid river (the American), and handsomely overlooking the entire grounds, it makes one of the most charming spots in this fair county; and although we had intended to make a hasty visit, yet we found so much to interest that we were detained until induced to accept the kindly hospitalities of our friend for the night, and thus also enjoyed the morning scene upon the banks of the American. We will not tell our readers all the luxuries we enjoyed—they must go and see—but this we can in truth say, we enjoyed our visit very highly, and would return thanks to our friend Smith, and his kind and accomplished sisters, for a social and intellectual treat; and also to our friend J. B. Saul, Esq., who presides over the floral department, for his kind attentions, according to him great praise for the masterly evidences of his knowledge and skill, in bringing out so much that is beautiful We were also indebted to Mr. O'Brien for an elegant bouquet of camellias, made in his usual excellent taste. To all these evidences of our friend Smith's usefulness to our State, due praise; but he has only performed *half* his duty, and although he may think he has done everything he ought, we leave him in all good feeling, and hope he will soon find that other and *better half* of duty.

Donahue's Iron Foundry.

How very few among the great masses in our community are aware of the stupendous enterprises that are being carried on in our midst, and how few are coversant with the immense amount of money that is daily and weekly paid to the mechanics of our city by some of the proprietors of our enterprising manufactories.

Recently, we were kindly invited to visit the new foundry of Peter Donahue, Esq., on First street, and we confess we were surprised to note the extent of the enterprises connected with this immense establishment. Mr. Donahue has recently erected a large and substanial fire-proof building, four stories high; the main buildings and the adjoining ones covering an entire block of ground. The first floor of the main building is occupied for the heavy work—here are castings of all kinds, some of them of the greatest magnitude. We saw a very powerful hydraulic press of 7,000 pounds weight, made for Theo. Welzel's candle factory, capable of working a pressure of 300 tons. We also saw a beautiful press, made for Col. Harasky, for his melting and refining establishment, which we learn is nearly completed. We examined a double engine, made to order, of great power, and perfect finish. This engine was making for Don Francisca Bustamente, of Mazatlan, to work rich, extensive mines which had been long idle. These mines had already been worked 1,000 feet. The engines were of powerful make, so as to secure their object, and would cost in the vicinity of $25,000.

To show the power of this foundry, we ascertained that castings could be had of fifteen or twenty ton pieces. A boiler for the steam tug Resolute was being made, and it is as fine a piece of work as was ever seen, costing some $7,000. We entered the "infernal oven," where the sand is dried for castings. It was a comfortable place *on a cold day.*

The work for quartz milling is done at Mr. Donahue's, to a large extent, and we learn that this kind of work is rapidly increasing from every part of the quartz mining districts.

The second story of the foundry is used as a carpenter's shop; and here are made innumerable patterns of the various castings of this foundry—from the most minute to the most gigantic.

The third and upper stories are used as the pattern rooms. They make a perfect museum; and here all that skill and ingenuity could devise, in form or size, can be found. Some estimate can be had of the extent of it, when we say that the collections of the patterns of this foundry are worth over $20,000.

Those powerful machines of Messrs. Stillman, Allen & Co., of New York, for riveting, punching, and heavy shears that will cut up iron plate as easy as a child will cut pasteboard, are used at these works. All the machinery of these extensive works is moved by a double engine of thirty horse power, which works to perfection.

A WORD FOR THE MINER.—We spent considerable time in examining the new amalgamator of Mr. Lightner, which has lately been patented by him. This is an improvement on the Chilian mill now used, the rollers being inclined to the bed plate, working the material more finely and perfectly, and less power is required. There is also a new motion given to this machine: it has a *trilterating power*, not possessed by any yet used. Mr. Lightner deserves success for his invention, and we hope he will make a fortune by it.

A WORD FOR FARMERS AND GRAIN GROWERS. Leroy's mower attracted our notice, and we took some time to examine this implement now passing to some still greater improvements. Mr. Donahue has purchased of the inventor the patent right for the U. S., and intends to make it one of the best implements that can be found. The great desideratum sought for, and which is to be perfected in this machine, is a new power of conveying a latteral motion to the knives. This is done by a serpentine groove in the cam-wheel, which oscillates rapidly and perfectly, or so well as to cut every blade of grass or grain heads—for the intention of Mr. Donahue is to make it a mower and reaper, and to make them durable. One great objection to many of the implements is, they are not strong enough for the heavy work required here. In these, particular attention will be given to the pivot joint and lower joint, where it connects with the knives, to make them so strong and firm as not to get out of order, and to work so perfectly as to save friction, and thus work smoothly and easy. These important features the present proprietor feels confident can be attained—and he will have the machines ready for sale the present season, for $600 to $750 each, of the largest and best size.

This is an important fact—for all the machinery that can be manufactured here saves so much to the wealth of our State, and gives employment to our own mechanics, which should be the aim of all who desire the prosperity of California. And Mr. Donahue is certainly doing a noble share—for we learn that about one hundred men are now employed in these works, requiring a very handsome sum of money weekly. The good of such enterprises is told in a few words—such men are true public benefactors. During the time given to this examination we were exceedingly and repeatedly gratified at the evidences we saw of the skill of our California mechanics—and, for the pleasure we enjoyed, we were indebted to Mr. Lightner, the able superintendant, who most courteously conducted us over the whole establishment, so explaining to us the several plans of labor as to make it doubly interesting, for which we return our kindest thanks.

THE MECHANICS' INSTITUTE.

THE Annual Meeting of the Mechanics' Institute of San Francisco, was holden at the Rooms, on Thursday evening. A large attendance of the members evinced their interest in the Society's welfare, and they came prepared to renew their efforts to build up this noble institution.

The time of the evening was devoted to the work in hand, the election of officers for the ensuing year.

The following was the result of the election:

JOHN SIME, President,
GARDNER ELLIOT, Vice President.
H. F. WILLIAMS, Corresponding Secretary.
P. B. DEXTER, Recording Secretary.
J. E. KINCAID, Treasurer.

Directors: D. VAN PELT, C. L. TAYLOR, W. MCKIBBEN, G. D. STREET, JAMES BANKS, ELI COOK, J. E. DAVIS.

An unanimity of feeling and action prevailed, all the members were united in a desire to awaken a due attention to this all-important interest, and we learn with pleasure that the Board will immediately set to work to prepare for the Great Industrial Fair which is to be holden in August, in San Francisco, under the auspices of the MECHANICS of CALIFORNIA.

It is to be hoped that a wide-spread interest will be felt for so praiseworthy an enterprise, and we are informed that we can soon present to the State the Programme of the coming Fair of the Institute, with the List of Premiums.

By request we republish the Circular of the Committee of the Institute, or their Report on State-Prison Labor, to which we call the attention of the Mechanics of the State. We believe every reflecting mind will be with the Institute in its views, that the present system of hiring out State-prison labor and making it a source of private speculation, and at the cost of the State, is most deleterious to the Industrial interests of the State. We believe also, that the labor of the convicts could be made a source of revenue to the State, and without injury too, to the honest laborer.

We trust the Mechanics of our State will respond to the call of the Institute, and bring the matter before the people and the legislature, so that the honest laborer shall be protected and the State be the gainer also.

Report of Committee on State Prison Labor.

HALL OF THE MECHANICS' INSTITUTE, San Francisco, February 25, 1857.

YOUR Committee, appointed to take into consideration the subject of State Prison labor as coming in competition with honest labor of this State, and, also, to examine and report upon a Circular on the same subject, entitled "The State Prison System of California," beg leave to submit the following report:

Your Committee, after availing themselves of all the information which they could obtain on the subject, are of the opinion that the present system of farming out the prison labor, and allowing the Lessee to pursue, by the use of that labor, all the different mechanical branches, in competition with honest labor, is fraught with evils of the most serious character, and, if continued, will seriously affect the prosperity of the State, by preventing the immigration of that most useful class of citizens, the mechanic and laborer, and be ruinous to all mechanical pursuits in the State.

Your Committee have examined the Circular above alluded to, and most heartily indorse the sentiments therein contained. The writer has not only shown the evil effects of the present system, but has given some excellent ideas and valuable suggestions, by which that labor may be employed to advantage by the State, without injury to private individuals. He has more forcibly shown the evil of the present system, by a comparison with twenty-two of the Atlantic States, which shows that, by judicious management, the prison labor may be made a source of revenue to the State, instead of paying the enormous sum of one hundred and twenty thousand dollars a year, to support a system by which the honest mechanic is deprived of the labor to which he is legitimately entitled.

Your Committee would recommend the following means, by which the evils of the present system may be remedied:

First, that the Mechanics' Institute send a Memorial to the Legislature, praying for a change of this system.

And secondly, that the Institute make a general call for a meeting, in this city, of all interested: and at such meeting make arrangements for issuing a Circular calculated to create a general interest throughout the State, which should be accompanied by petitions for signatures, praying that the present system be abolished, and that the State have control of the convicts who shall be managed by a Superintendent, who shall direct their labor to such branches of industry as will not interfere with any branch that can practically be prosecuted with honest labor.

Your Committee, believing this subject to be within the province of this Institute, would earnestly recommend that the most active measures be taken by which a reform may speedily be brought about; and show by our acts that we are truly the friends and defenders of the laboring class, and that the Mechanics' Institute is willing to lead the van in any reform—whose object is to defend and protect the Mechanic, and sustain the dignity of labor.

All of which is respectfully submitted.

G. D. STREET,
D. VAN PELT,
JAS. A. BANKS.

Adopted by the Board of Directors, February 25, 1857, and ordered published, with a request that all the Papers throughout the State, favorable to the change recommended, copy the same, with a request that all the Mechanics in the State, interested in the subject matter, will take immediate action on the same.

Quartz Mining in California.

THIS great interest is rising in magnitude every day in our State; it is not only the value of the gold that is thus revealed and brought into use, great as that amount may be, but it is the immense wealth it will give to our State by calling into use the mechanical skill and labor of the State. We rejoice to note the improved feeling manifested in relation to the great interests of California, a willingness to now recognize that mechanical skill is essential to prosperous mining, and that agricultural interests are blended with both; our motto has always been that the success of the one is the success of the other in a great measure. The great *triune* of labor and wealth, is agriculture, mining, and mechanical skill, and each should so labor as to promote the welfare of each and all.

The union is powerless without the mechanic, and both must go to bed supperless without the farmer, and thus, like a great and united trio band, they should labor for each other's good.

Right glad are we to receive the article of our correspondent and friend from Mariposa county on Quartz Milling, and we say to him, and to all who labor for the development of California resources, that our journal is offered the miner freely for any and every discussion that tends to the good of the laboring classes, and we wish it clearly understood that the CALIFORNIA FARMER embraces under that proud name, *all useful sciences*, and we shall be glad to hear often from our friend from Mariposa, and all other friends in every other section of our highly favored country.

We rejoice to see the exertions made to advance this great interest by newly invented and valuable machinery, and we wish success to our friend in his inventions—and would also here call attention to our friend Lightner's valuable Amalgamator, spoken of at Donahue's foundry; this is worthy the notice of the miner; and we are sure the many friends of E. L. Beard, Esq., will rejoice to hear that he is completely successful in "striking a lead" that shall give him the wealth he so liberally has dispensed in the days of his prosperity, and that the lead he shall now strike will be like the "widow's cruse,"—always hold out.

With many thanks to our valued friend from Mariposa, for his communication, we call for more light on mining interests.

The Farmer in Napa City.

AT the request of friends at Napa, we have in times past sent a part of our subscribers' papers to the post-office, and part to the express office of J. M. Dudley, Esq. As Mr. Dudley's office is a central place and so convenient for all, and as Mr. Dudley has a fine collection of periodicals and papers, we supposed it would be more agreeable, and hereafter we shall send to all our subscribers there. Mr. Dudley has very kindly offered to forward our papers up the valley, also. If any of our subscribers do not receive their papers regularly we wish they would let us know, and we will attend promptly to any delay. Mr. Dudley is agent for the FARMER, to whom we invite our friends to subscribe for the present volume.

We also remind those who may be in arrears, and who have not found it convenient heretofore to remit us, that their bills have been left with our old friend and correspondent Jack W. Smith, with whom they will please settle, and thus save the trouble of sending by mail. Mr. Smith is also agent for the FARMER, and we hope our friends of this great and prosperous valley will give us a largely increased list, now that the farmers are so prosperous.

We don't want our farmer friends to get into law suits, by any means, but if they accidentally should, or should want deeds drawn, or legal papers made, we hope the card of our friend J. W. Smith, of Napa, will not be forgotten. He is one of the kindest hearted men in the world.

NEW BOOKS.—We have just received several invoices of valuable books from publishers East, which we shall notice in detail next week.

American Wines.

SHALL the United States depend upon foreign nations for their wines? or shall they be, as they truly assert, independent, and produce not only their own wines, but every other necessary and even luxury that the wealthy will always possess?

Ohio has taken the lead in manufacturing wines, to a large extent, from our native grapes; and other States are following her example. The youngest State in our glorious Union, California, can yet outstrip all others in this production, if she will but improve the opportunities nature has given her.

California possesses advantages over every other State in the Union for the culture of the grape, and the manufacture of the best of wines. As an evidence of this, see the reputation the wines of California have already won. Mr. Longworth has spoken of our success in the culture of the grape, and the facilities we possess in our climate and soil. He says, in his letter to us, published in the sixth number of this volume of the FARMER, speaking of California, "Your climate is suited to cultivate the best table grapes of Europe," and he might also have added, the best wine grapes. We hesitate not to say that we shall soon have the acknowledgment of Mr. Longworth, of the excellent quality of California wines, as samples have been sent to him from manufacturers here. We shall also have the opportunity of testing all the best varieties of Mr. Longworth's celebrated wines, as it will be seen that the house of S. H. Meeker & Co. have all the best wines he manufactures—Sparkling Catawba, and Isabella, and the Still wines also.

It is wholly unnecessary to speak of the character and value of these wines, as Longworth's wines bear a high reputation the world over. The far famed champagne wine of Max Sutaine & Co.—cabinet champagne—is now offered by Meeker & Co., they being the sole importers in California of that kind: this, too, being of the very highest quality of champagne. Thus, it will be seen, a just comparison can be made of the true character and value of the best American wines with the best of European, and all at one house. We trust that a fair and true trial may be had respecting the wines of the United States, and particularly those of California.

It is not necessary to speak in recommendation of the house of Meeker & Co. Their high standing, for eight years in California, will always secure to them, as it always has done, the most unbounded confidence in whatever they recommend, no house on this coast possessing a more honorable reputation as merchants, or a more unspotted integrity.

FAIR AT STOCKTON.—We are requested to inquire of those who have the management of the State Agricultural Fair, what progress is making in the organization of the Board of Management, the present year, and what is the prospect for a Grand Fair at Stockton? To every observing mind it must be very apparent that this is a question of some importance to the citizens of Stockton and vicinity, for it cannot be doubted that that section of country has many very influential farmers, who desire to arouse the proper attention to this great interest. Every merchant, millwright, miller, manufacturer and farmer are directly interested in this matter, and we hope to hear from the citizens of that quarter.

CALIFORNIA SKILL.—It will be recollected that much has often been said about the foundries of the Eastern and Middle States, those famous in New York, Boston, and other places. We also can boast. A recent effort, and a most successful one, was that of lengthening the shaft of the steamer Golden Age, which has just left for Panama. The shaft, before it was broken, weighed eighteen tons. An effort was made to weld it, but failed; another attempt, that of lengthening it by welding blooms to the shaft, was perfectly successful—and may be esteemed a triumph of skill, and one of magnitude for a young State. Mr. Brooks, of the Murray Iron Works of San Francisco, was the successful superintendent, and to whom great praise is due.

THE POULTRY YARDS OF OHIO.—A casual inquirer would hardly suppose the value of the Poultry Yards of any one State to amount to any considerable sum; yet they form a large item in the sum total of each State. We find by an estimate made in the Ohio Farmer, that the Poultry yards of Ohio count largely in dollars. That journal estimates the "Hen Crop" at the round sum of *two millions of dollars annually*, equal to one-third the value of the sheep, and one-half the value of the hog business. We think this is "cackling" and "crowing" to some purpose. The same journal says, if the Geese, Ducks and Turkeys were added, it would make the sum one of importance. It is that already, and if we could gather the statistics of the Poultry Yards of the United States, it would be an interesting table.

A NEW SCIENCE.—Another *type* of the science, if not a new science, has just been brought out in New York. We have the Daguerreotype, the Ambrotype, the Melanotype, and others, we know not how many; but we have just received a copy of Humphreys Journal, with a special card and notices attached, and by this we learn that the first public exhibition of the new art was to take place on the 16th of February, in the city of New York. This new and rare process is called "Hallo-type." It is said to supersede all other kinds of pictures. We shall speak of it again.

FAMILY GROCERIES.—We would call the special attention of our patrons to the advertisement of Messrs. Bradshaw & Co., who are to *move* to their new and spacious warehouse on the 15th of March, and who now offer their large stock at a very low rate till they move. It is well known that their's is the largest and best warehouse for family groceries in this State.

[For the California Farmer.]

Quartz Mining.

MESSRS. EDITORS: I wish to call your attention to the important subject of Gold Quartz Mining in this State, and will preface my remarks by saying, that the subject is of more importance to the prosperity and welfare of the State than most people are aware of. The importance of this branch of mining has increased so rapidly within the last two years, that the attention of our public journals should be called to the subject, in a manner that would assure the public that they are in earnest, when they prate so much about *California interests*.

Where, I ask, can the practical miner look for *reliable data* upon which to build his mills and machinery for crushing the glittering ore that teems in our hills? He has been the victim of *fraud and ignorance* long enough. Who of the public journals of the State will aid me in bringing this subject properly before the mining world, in an intelligent and practical manner? Will the FARMER devote one little corner in its ample folds, to the discussion of this important subject? If so, you will lay the mining public under many obligations for the privilege of a free discussion of the different modes of constructing quartz mills and amalgamating processes.

I have made this appeal to your generosity with the more confidence, since your journal is declared the organ of the mechanics of the State. Therefore, I think the mechanics should assert their rights, and proclaim their wants, their trials, and their triumphs, as well as the farmer; the more so as they are twin brothers and co-laborers for the world's good. The farmers and the mechanics are the great men of the land, in the *true* sense of the term, and they should be honored and protected by our government as the great foundation of our freedom and happiness as a people.

It is the farmer that makes his millions of bread, and materials for clothing the shivering nations of the earth; he gives food to the hungry and clothing to the naked. But his triumphs are not alone. It is the mechanic that soars far above the ordinary grasp of mortal mind, and God-like, creates great steamers that plow the boisterous seas with speed and safety; it is the mechanic that weaves the web, and fashions the clothing for man; it is the mechanic that creates the family board, around which clusters the fondest recollections of our childhood; it is the mechanic that has given us instruments by which we measure vast continents, and even globes, by the ingenious arrangements of the telescope, the level and the compass; it is the mechanic that furnishes our parlors, our kitchens, our wardrobes, our farms, and our homes. Then why are they neglected and looked upon by the world as a rough, uncouth set of men, that are unfit to come into the parlors of wealth and fashion?—a set of men that must take the back seats in the synagogue, the church, and the councils of the nation. They are a set of men who labor day and night for the advancement of commerce—the spread of civilization, the enlightenment of the world, and the emancipation of the *laboring poor of America*; and yet the mechanic is looked upon with supercilious contempt by the *go-betweens* of society (as some pretending merchants are), and is not considered worthy of the friendly aid of some of our public journals.

I have said more in behalf of our mechanics than I intended to in the outset, but the subject is a good one for abler pens than mine, and if I can be instrumental in placing even one of our hardy mechanics in his proper light, I shall feel that I have done a good work for society, and for the world; you will therefore pardon this digression from the subject with which I set out.

Quartz Mining is a science by itself, and has to be learned by experience and careful observation. No man can learn the business from books, he must "go through the mill"—(to use an old and favorite adage)—before he can know much of the practical operation of quartz mining. The first thing that I shall call attention to, is the mode of crushing or reducing the ores. The experience of all mining countries proves that the stamping mill stands pre-eminent, above all other modes, of reducing brittle ores, like quartz and other rocks, that contain gold. I shall therefore confine myself at present, to the consideration of my *Improved Georgia Mill*. I have been recently engaged in erecting a small mill of eight stamps upon my improved plan, for Mr. E. L. Beard (of San José) at Bear Valley, Mariposa county, and as I have already published a description of my stamping mill in the San Joaquin Republican, I will not go into details now, but will merely give a general outline of the machinery, so as to elicit inquiry, and if my plan is best, it ought to be generally known; and if it is imperfect in any important particular, there will be none more ready to give due credit to any mechanic who will remedy its objections or imperfections than myself, for I do not entertain one selfish or envious sentiment towards other mechanics, but would be among the first to acknowledge any improvement made by others. My greatest pride is to be known with generous and whole-souled mechanics, and will contribute as far as I am able to the general good of my own class, viz.: the "laboring poor of the land."

My mill consists of a gallows-frame and battery of four stamps in each division. The stamps are entirely of iron, and are worked on the revolving principle. The bed or foundation is separate and distinct from the gallows-frame, and thus the vibration from the blows of the stamps is not felt by the machinery; the mortar boxes are bolted down to the block, or foundation, and is separate and distinct from the framework, leaving a space of some two feet between the top of the box and the lower beam of the gallows-frame; thus preventing the fine sand from the batteries from working up the stems of the stamps, and wearing out the bearings of the machinery. There are more fine mills ruined from this one deficit, than from all other causes put together, and if my mill does not excel in any other particular I shall have gained an important point for the quartz miners of this State, by securing them against the necessity of rebuilding their mills every four months. I have also constructed a new mortar with dies, that looks well; and if it succeeds, as I expect it will, I shall have gained another important point in the business of quartz mining. The dies are constructed so that either side may be placed down, and when one side or face is worn down, it can be turned over, and will last as long as the first face.

The peculiarity of the mortar consists in there being a keyhole left underneath the dies, and passing through the side of the mortar, through which an iron key or wedge can be introduced, to force the die out of its recess or bed, and then the mortar can be readily cleaned out by washing the gold and sands that remain, through the keyhole into a pan or tub.

The mill is constructed throughout with the view of taking it to pieces, and repairing with facility. One set of stamps may be stopped, taken entirely out, and replaced, without stopping the balance of the mill, or interfering with any other part of the machinery. In fact, each battery of four stamps is a separate and distinct mill of itself. For durability, simplicity and efficiency, I think it stands unrivaled in the way of a stamping mill.

I will give you a more particular description of my "improved Georgia Mill," before long, and will also give you some few facts of general interest, in relation to the processes of amalgamation now in use and will suggest some improvements in that branch of quartz mining. In the meantime, I shall be happy to hear from the miners and mechanics of our State, in relation to every part of quartz mining and quartz mills. A free interchange of experience and ideas is the sure road to improvement.

Very respectfully, your ob't serv't

J. E. CLAYTON, Mining Engineer.

BEAR VALLEY, Mariposa County, Feb. 12, 1857.

OBITUARY.

"O Death where is thy Sting! O Grave where is thy Victory."

DEATH! Like the sound of some great alarm bell, so this word strikes upon the ear, startling and stirring the very heart's blood, and oft curdling it around the very altar of the heart.

But Death is not the end of life—Death is not annihilation! What men term death is but the throwing off the mortall coil that envelopes the very living part of us. Death, but sets the prisoner free; and this *change* is not in reality death; it is only the beginning of a new, an untried, a better life, and where Death or the Grave has no power.

"Life is real, life is earnest, and the Grave is not its goal; Dust thou art, to dust returnest, was not spoken of the soul." And this beautiful and consoling thought should ever sustain those who are called upon to part with those who are near and dear to them in this trying world.

Among the passengers of the Golden Gate on her last trip down, was MRS. ELIZA C. POLHEMUS, wife of DR. J. L. POLHEMUS, druggist of Sacramento city. Mrs. Polhemus was taken ill the last year, and all that skill, care, kindness and affection could prompt, was brought to bear against the disease, which for a time seemed to yield. Mrs. P. was relieved in a measure at the Napa Springs; she was at the upper sulphur springs when that hotel was destroyed by fire, and the circumstance of alarm and consequent removal may have been unfavorable. Mrs. P. then came to Sacramento, and went to the country—all and every exertion that devotion could prompt was made till almost hope failed. Recently she expressed a wish to visit the East, and a hope that a sea air and the change might prove beneficial. Airy staterooms were provided, with careful nurses, and kind friends, and her last, her every wish answered, and she departed in the Golden Gate as named.

Those who witnessed the departure of this lady, and have witnessed that and similar scenes, know and hold sacred the tears that flow when parting from those we may hardly hope to meet again on earth. That was a sad scene; we have seen many such, and we know the heart-agony of it, for we have been called to suffer it.

The return of the last steamer brought the news of the death of Mrs. Polhemus, on her way down the coast. She had indeed gone "home"—gone where there is no more pain or sickness or suffering.

Mrs. Eliza C. Polhemus was 26 years of age. She was married to Dr. J. L. Polhemus, three years since, when the Doctor was at the East, and came to California, where she has since resided, fulfilling all the duties of a devoted and affectionate wife, kind and true neighbor and friend, living a most exemplary life, esteemed and loved by all. She has been called thus early in life, from a large circle of mourning kindred and friends; her loss will be deeply deplored; but she will be tenderly cherished in the memory of all, as one pure, beautiful and good. To the sorrow-stricken partner, there are no words that can still the void—words cannot stay the anguish; friends, however numerous, cannot fill the void; sympathy may assuage the grief, but time alone, added to the hope of a blissful meeting in a better world, can only answer the voice that ever speaks to a bereaved heart.

HOLLOWAY'S PILLS.—A certain cure for sick Headache and Disorders of the Stomach. Their virtue in such cases is known in all parts of the world. Those afflicted with Liver and Bowel complaints, and indigestion, cannot use so good a remedy. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box.

BOOKS FOR GARDENERS.

JUST received, at the office of the FARMER, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

McCONBE & Co.'s AMERICAN EXPRESS.—Our friends at San Mateo, Redwood City, Woodside, Santa Clara and San Jose, or any other place on the route of this Express Company, can forward to us through them, as they are agents for us.

SPECIAL NOTICES.

☞ **California Steam Navigation Company.**—A meeting of the Stockholders of the California Steam Navigation Company will be held at their office on THURSDAY, Feb. 26, at 10 o'clock, A. M., for the purpose of submitting the question of a change in the Constitution by reducing the number of Trustees; also, for the election of Trustees for the ensuing year.

By order of the Board. WM. NORRIS,
v7-6 td Secretary.

☞ **Mechanics' Institute.**—The Annual Meeting of the Institute for the election of officers for the ensuing year, will be held at their rooms, on WEDNESDAY Evening, March 4th, at Half-past Seven o'clock. The attendance of every member is requested. By order.

v7-6 td P. B. DEXTER, Rec. Sec'y.

☞ **CHRISTMAS GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.

WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

A PERFUMED BREATH

WHAT lady or gentleman would remain under the curse of a disagreeable breath, when by using the "Balm of a Thousand Flowers" as a dentifrice would not only render it sweet, but leave the teeth white as alabaster? Many persons do not know their breath is bad, and the subject is so delicate their friends will never mention it. Pour a single drop of the "Balm" on your tooth-brush, and wash the teeth night and morning. A fifty cent bottle will last a year.

A BEAUTIFUL COMPLEXION may easily be acquired by using the "Balm of a Thousand Flowers." It will remove tan, pimples and freckles from the skin, leaving it of a soft and roseate hue. Wet a towel, pour on two or three drops, and wash the face night and morning.

SHAVING MADE EASY.—Wet your shaving-brush in either warm or cold water, pour on two or three drops of "Balsam of a Thousand Flowers," rub the beard well and it will make a beautiful soft lather much facilitating the operation of shaving. Price only Fifty Cents.

W. P. FETRIDGE & CO.,
Franklin Square, New York.

For sale by all druggists.

☞ PARK & WHITE, Washington street, opposite the Post-Office, Agents for California. v6-19 3m

A CARD.

☞ THE Report of the Agricultural Society, for the year 1856, including the full Reports of the Visiting Committees to the Farms and Vineyards throughout the State, Reports on the Exhibition, the Annual Address of the President, Address of Col. J. B. Crockett, detailed list of the Exhibited Articles, the Prize Essay on the Potato, with other important matter, is now issued in a neat Pamphlet of about eighty pages, illustrated. Persons desirous of obtaining copies will please address the Office of the CALIFORNIA FARMER, when copies will be forwarded as per order. Price Fifty Cents.

For sale at the Offices of the CALIFORNIA FARMER, State Agricultural Society's Rooms, Sacramento—and at No. 130 Washington street, San Francisco. Also, at Ullman & Co.'s, J. W. Sullivan's, J. J. LeCount's, San Francisco; Dr. J. C. Cobb, and J. B. Manny, San Jose.

LETTERS FOR THE FARMER.—Our correspondents can now address us either at San Francisco or Sacramento, as shall be most convenient for them. Letters, &c., addressed to us at either place will be promptly attended to. Our exchanges will please forward their favors to us at San Francisco, and publishers who are in correspondence with us will hereafter please forward their works for review to San Francisco.

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morals* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promotes habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom then will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,346 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

NORTHERN ASSURANCE COMPANY,

SMITH BROTHERS & CO.,
Agents for California,
Corner of California and Battery streets,
v7-3 3mis San Francisco.

A Gardener at Shares.

AN excellent opportunity can be given to a good practical as well as scientific gardener, for a series of years. To a person who could command a moderate capital a chance will be given that is permanent, and certain of paying very handsomely.

None need apply unless they can produce the very best testimonials as to ability and character, and one who is free from embarrassment, and can answer the advertiser fully.

A note addressed to "B. C." through the FARMER Office, with real signature, will receive prompt attention. v7-5 tf

A House and Garden Wanted.

A PRACTICAL working Gardener would like to take charge of some house and land, to keep it in order and improve it for one or two years, only requiring as payment the perquisites he could make by extra cultivation and sale of vegetables, &c., such as could be grown while keeping the place in order and safety.

Any person going East, or who wish a place kept in order for one or two years, without cost, can have satisfactory bonds that this will be done, if it is a good place, by addressing "T. Y. F." through the FARMER Office, with real name: then the advertiser will call on them.

☞ Please state where the place is. v7-5 tf

MUSINGS—NO. 1.

As dreamily watching the hearth-fire's last light,
I trace in each glimmer a fairy form bright,
So airy and changeful in each fitful glare,
The charm may be broke by the next breath of air.
See! upward they rise on fire-gilded wings,
While soft on the ear their low music rings;
But alas, they're enwrapped in a dark, gloomy shroud,
Their forms fade away in a thick, smoky cloud.
The vision departs with the last glimmering ray,
And in ashes lie smold'ring bright "Fairy" and "Fay."
So life's morning opens with pictures all bright
From sketches of fancy by hope's brilliant light.
But 'neath the rough touch of the world's real utile,
Effaced is each trace of the beautiful ideal,
Too much like the phantoms we watch in the fire,
They light us a moment, and then they expire.

CLARA WILDWOOD.

Letters from the Green Mountains.

WELCOME! most welcome art thou "Clara Wildwood," to the group of fair spirits that make up the FARMER's band of sweet warblers. It will be seen by the date of Clara's description of Maple Grove, that her happy missive was written long months since—it came to us with another from "Eva," from one who had recently visited the beautiful green mountains of Vermont, and who, meeting with our fair correspondents Clara and Eva, she accepted the missives of each to bring to us; they were mislaid until recently, when they were brought to light, and we now present them to our readers, confident they will be perused with pleasure and interest.

May we often hear from Clara Wildwood. Although thus long delayed, she is none the less welcome, but rather rises in value as we recall how much we might have enjoyed by having been often charmed by her thoughts, both in prose and verse. Clara's "Musings" convey very beautiful images, all true to nature—and we hope these images will come to us frequently:

MAPLE GROVE, June 10, 1856.

MR. EDITOR: Your paper (the FARMER) has reached me, even at my mountain home, and, need I add, has been perused with interest. For truly Bessie says, "the mystery of sympathy is a curious power," and it is this power perhaps, that, striking the electric chain "wherewith we're darkly bound," calls forth this response from a distant shore: for the connecting link which binds heart to heart and friend to friend, can be made to vibrate when touched by kindred spirits, even to earth's remotest shore. Then wonder not that my heart's sympathy is stirred when that land of golden dreams and sad realities contains those connected by ties of kindred and love.

But I like to have forgotten that I took up my pen to give you a picture of my "Mountain Home," though I do not seek to vie with one of your correspondents who with a practiced pen has so happily sketched hers, and to which I would fain believe she is now sighing to return, if, like mine, it is now dressed in emerald green, inwrought with beautiful flowers. Behold, on one side are traced in bold outlines the rugged Green Mountains of Vermont, which rise peak on peak, ever dressed in their perennial brightness; each one having its contrast in color and appearance. At their base placidly glides the transparent rivulet, its margin fringed with flowers, which at this season are ever bright, and grass that is ever green.

On another side, a softer view of woodland and meadows, interspersed with waving grain. Then again the Idorondac of a sister State rises in the misty distance; far, far beyond the bright waters of Lake Champlain. And yet another view of a descending plain presents itself, stretching to the south as far as the eye can reach, while the "old homestead" stands embowered in trees, and coyly peeps out from its clustering honeysuckles and roses, while interspersed along the road-side and meadow are the stately oak, the changing maple, the graceful elm, and the fragrant but useful birch, as many a truant urchin can testify.

And when I look upon this lovely land with its beautiful scenery, happy homes and pleasant memories, I ask what does California offer for the loss of all these? Can her golden treasures, hid deep in earth's bosom, repay for all the labors, privations and heart sighs, which it costs to secure them?

"Is life can love be bought with gold?
Are friendship's treasures to be sold?"

But, lest I weary you, I will cease my imaginings, and wait a reply from some of the bright galaxy of my sister correspondents, who I am sure will give us the "bright side of the picture" of their California homes, which they fain would make us believe were the "land of Araby the blest."

Yours,

CLARA WILDWOOD.

Eva to Mabel.

THE annexed charming letter from our new and highly valued correspondent "Eva" was accompanied by the message of "Clara Wildwood," each coming all the way from the Green Mountain State, to hold converse with those they love on these bright Pacific shores. There are thoughts awakened by the pen of "Eva," that will bid many a heart to go back to '49 and '50, and then feel how true are the images "Eva" draws of the life of a Californian. And yet, withal, California is the land of gold, and men will seek it at all hazards. But we will not detain our readers from the following gem of Eva's: we trust we may be often favored from the same source—that we shall have a large string of gems. These we will give to the kind and generous readers of the FARMER, who can truly appreciate them.

MY DEAR MABEL: I have been thinking much of you within the last few days, and cannot resist the impulse to write you some of these many thoughts.

I love thee for thy kindly sympathy, and the many sentiments of thine so exactly in unison with my own; yet *I* can never tell *my* thoughts like thee. They come—those glowing pictures in my mind—then vanish like a meteor from the sky, and leave no trace upon my heart and brain. To *thee* 'tis given to tell *my* thoughts, and this electric chain of sympathy binds my heart to thee—and oft at twilight's hour in saddened mood I stray, to ponder upon this "unwritten music" in my soul, and think of thee, and thy mission on this weary earth. 'Tis one of love. Persevere, my friend, and if only *one* mourner's heart is comforted, 'twill amply repay severer toil than thine.

O if there is one star above another in glory amid the spirits of the redeemed in heaven—one crown more radiant than another, amid those that circle round the throne of the Great Eternal—it is for those who speak in gentle tones to the sad and lonely wanderer on life's stormy sea, and lift the burden from the weary heart, whose urn with bitter drops is running over.

Dear Mabel, in this land of thy adoption—in this far-off sunny clime, are many to whom 'tis but a land of mournful associations, and painful, bitter memories. *Such* will love thee, and eagerly look for thy "wildwood" warblings. Let me give you a picture.

I know a maiden fair—not what the world calls beautiful, but to me she is passing fair. The clear light of intellect is stamped in unmistakable characters upon her open brow. There is a love-light in her mild blue eye, and her smile is like a sunbeam, gladdening all around with its joyous light. And she, the gentle and true-hearted, seems all unconscious of these high and glorious gifts.

Do you recognize the portrait, Mabel? If not, come with me some of these glorious evenings, and wander forth into the still beautiful moonlight, and I will tell you something more of her, and give you another picture still—of a husband and wife and little one—a merry trio, who landed on these far Pacific shores in search of golden treasures; and instead—the wife *buried her treasure* here in the cold damp earth. Since then many a weary day has dawned and closed in sorrow upon the stricken one. She has found many friends in this far-off land, who would gladly pour the balm of consolation into her sorrowing heart; but none like this maiden fair. Like rain upon the parched and thirsty earth—like a fountain in the desert to the worn and weary traveler—like *manna to the hungry soul*, was her heart sympathy. And now, Mabel, what boon shall we ask for her in this world? Were we in possession of the famous Aladdin's lamp, no earthly treasure could be too great to bestow; but as we have it not, we will ask for her what is of far more value than earthly treasures which fade and perish.

O my Father in heaven—Thou before whose throne earth's mightiest bow in humble adoration, vouchsafe to her thy care and protection—the laurel-wreath here, and a crown of glory hereafter—is the sincere prayer of her faithful friend

EVA.

Extravagance.

THE fact has become painfully apparent that marriages are diminishing to a great extent (particularly in the city of Boston) among the youth of America. Statistics show a falling off of twenty per cent. this present year from last. The cause of this is, to an extent, attributed to the greatly increased expense of dress, of supporting a family, and generally living in style. Were it not for the fact that the half of this evil had never been told or in fact realized, I should say nothing about it; or if it was confined to the cities I would keep silence. The disastrous results to which this increasing love of display will lead are not easy to be foreseen. Its first effect has been to greatly diminish the number of marriages, and will be to make those which do take place more dependent upon wealth than love. Its second effect will be to drive those young men who are not able to marry into other means of filling this vacuum in their existence. Other sources of enjoyment must be found; they are to be obtained in the club-rooms, in the theatre, and too frequently in the haunts of dissipation. The young man who is doing well in business, and who having arrived at sufficient mental and bodily maturity for taking this important step of getting married, is deterred from so doing solely on account of his inability to support his family in style, is in a most dangerous and deplorable condition, without the pleasure and comfort of a home; he either becomes a misanthrope, or else contracts a careless, dissipated habit of life, both of which are destructive to good society. And this is but the beginning of the evil results. It as certainly tends to degeneracy and final extinction of the race as the earth turns on its axis. We see it in the thousands of puny, affeminate, vicious young men, and in the vain, sickly sentimental young ladies, distracted with Fashion, wasting their precious lives and abilities over those miserable productions of depravity, entitled "fashionable novels," with which all our large cities are filled. If the present generation has arrived at such a pass—if the passion for display, for expenditure, has already assumed so formidable an appearance, what must we expect of future ages? Retrenchment societies have been formed in some of the European cities for the purpose of discountenancing extravagance, but they alone can do but little; it must be done by those who exert a powerful influence in society, and by the press.—[Euler Norcross, N E. Far.

A MARK OF PROGRESS.—Porter's Spirit of the Times, a journal devoted, as our readers are aware, "to Field Sports, the Turf and the Stage," has frequently congratulated the country on the happy fashion just now so prevalent, of ladies riding, at our County, and some even of our State Agricultural Shows. It, last week, furnishes a striking example of the progress thus effected toward achieving what it considers the aim and tendency of this Female Equestrianship, viz: to *"help make racing a national sport."* Agreeing entirely, as we do, in this view of the probable result of such exhibitions, we cannot neglect to chronicle all the steps taken toward its accomplishment. The one in question is as follows: A challenge for a match of horses recently appeared in the paper above quoted, from a lady, who has found several equally "spunky" dames and damsels to accept it—about one of the latter of whom we now receive the information below:

"Three times has she been a victor at the trotting courses of the Agricultural Fairs; on one of which occasions she (at Canandaigua) drove a black Morgan stallion, in harness, in the slashing time of 2.38. This lady desires us to say to Di Vernon, that she is indifferent whether the trial be in running, steeple-chasing, or in trotting; and if in running, is willing to go in either one or four mile heats."

According to present probabilities, the Union Course, which has already been the scene of so many similarly refined and ennobling contests, will shortly "behold two beautiful and high-spirted women, mounted on blooded running horses, flying through a four mile heat!" With Porter's Spirit, "we confess to no little interest in this business." *Are* our mothers, wives and sisters to be engaged in thus drawing the country "a few inches nearer the millennium" of the turf and its accompaniments?—[Country Gentleman.

BOOKS, &c.

Valuable Works
PUBLISHED BY
BLACKIE & SON,
No. 117 Fulton street, New York.
A HISTORY OF THE EARTH AND ANIMATED NATURE. By Oliver Goldsmith. With numerous notes from the works of the most distinguished naturalists. Illustrated by nearly 2,400 figures, of which 730 are beautifully colored. Two vols. large 8vo.
RHIND'S HISTORY OF THE VEGETABLE KINGDOM. Embracing the Physiology, Classification, and the Culture of Plants; with their various uses to Man and the Lower Animals, and their application in the Arts, Manufactures and Domestic Economy. Illustrated by 700 figures engraved on Wood and Steel, of which 100 are elaborately colored. One vol. large 8vo.
THE FARMER'S GUIDE. A Treatise on the Diseases of Horses and Black Cattle, with Instructions for the Management of Breeding Mares and Cows. By James Webb, Veterinary Surgeon.
HOW TO CHOOSE A GOOD MILK COW; or, a Description of all the Marks by which the Milking Qualities of Cows may be Ascertained. With a Supplement on Dairy Cattle, their Qualities, Management and Productive Results, with Hints for Selecting. Illustrated with Engravings.
☞ Samples of the above Books can always be seen at the Office of CALIFORNIA FARMER, where Catalogues will also be found. v7-6

The Most Successful and the Best.
NOW COMPLETE AND FOR SALE,
SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.
The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.
By EPES SARGENT, author of "Standard Speaker," &c.
The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.
The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.
In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.
Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!
SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.
Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

v7-6 3m San Francisco, Cal.

Rural Publications.
THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages. Two Dollars per annum. "Without question the BEST Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."
THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.
THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.
SPECIMEN NUMBERS
Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to
LUTHER TUCKER & SON, Albany, N. Y.
☞ Subscriptions for any of the above works received at the offices of the FARMER and forwarded v7-2 tf

MEDICINES, &c.

FOR THE REMOVAL AND PERMANENT CURE OF

All Diseases arising from an Impure State of the Blood or Habit of the System.

In this preparation are strongly concentrated all the medicina properties of Sarsaparilla, combined with the most effectual aids, the most salutary productions, the most potent simples of the vegetable kingdom; and the combination is such that one mod ifies and improves the other, producing a compound differing entirely in its character and properties from any other preparation, and unrivalled in its operation on the system when laboring under disease. It has been so fully tested, not only by patients themselves, but also by physicians, that it has received their un qualified recommendations and the approbation of the public and has established on its own merits a reputation for VALUE and EFFICACY far superior to the various compounds bearing the name of Sarsaparilla.

From the Army.

MONTEREY, CAL., January 18, 1850.

MESSRS. A. B. & D. SANDS: Gentlemen,—I beg leave to add my testimony in favor of your invaluable medicine, hoping it may lead some other unfortunate beings to try its effects, and that they may be benefited as I have been. I arrived here by the overland route, about the first of October last. A few days after I was attacked with a very disagreeable eruption of the skin, which no physician could not cure. I happened to find your Sarsaparilla in a store in this place, and remembering the popularity of the medicine at home, I purchased three bottles, which had the desired effect of removing my difficulty entirely.

With high regards, yours, &c.,
J. H. MILLER, Lieut. U. S. A.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists and Chemists, 100 Fulton-street, corner of William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

CLOVE ANODYNE

TOOTHACHE DROPS.

Complain no more of Aching Teeth.

These Drops have been extensively used by thousands, whose experience has proved that the Anodyne will give immediate and permanent relief after the failure of every other remedy. It is pleasant to the taste and smell, and a few applications will entirely remove the pain and soreness from a decayed tooth, so that it may be filled and rendered as useful as ever. When the pain proceeds from the face, or from the gums around a tooth apparently sound, this Anodyne will give a speedy relief by rubbing a few drops on the part affected.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, No. 100 Fulton-street, corner William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v6-21 3m

The Farmer's Drill.

[PATENTED, AUGUST, 1853.]

THIS celebrated Drill has taken the highest premium at the Maryland State Fair, held at Baltimore, Oct. 28th, 1853; and at the great State Agricultural Fair of Pennsylvania, held at Pittsburg, on the 27th, 28th and 29th of September, 1853; also, at the York County Fair; and, in short, wherever brought into competition with other drills, and cannot fail to supercede every other.

Being legally empowered to act as Agent for California and Oregon, the undersigned would respectfully call the attention of Farmers and Mechanics to the same. Farmers desirous of testing its practicability can do so gratuitously, as I have lately received one by clipper.

This Machine offers superior inducements to mechanics who would wish to engage in constructing them. The right of Counties or the State will be disposed of on reasonable terms.

For full particulars address
M. G. GRIFFITH, Agent, Diamond Springs, Cal.;
Or to C. FINKBONER
(Of the firm of G. W. Stewart & Co.),
v7-2 3m* Grain Dealers, San Francisco.

To the Farmers.

THE subscriber would respectfully announce to the Farmers of California that he has now on hand and for sale, on the most reasonable terms, a good assortment of Agricultural Implements suitable to the wants of the farmer at this season of the year, amongst which is an IRON GANG PLOW with Steel Mould and Shear;

Every variety of Cast Plows of the most approved makes.
Side Hill Plows; Michigan Reclaiming Plows;
Peoria Plows; and a Cincinnati Steel Mould and Shear Plow, of extra quality; Harrows, Corn Shellers;
Cans of superior kinds for Dairymen.
Just received and arriving by every Clipper.

S. L. PALMER,
v7-2 3m corner Washington and Davis streets.

New Cultivator.

THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measures operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.

Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.

All persons are invited to call at the workshop and examine it.

On Davis street, bet. Sacramento and California,
SAN FRANCISCO.

THE undersigned are prepared to execute orders for castings of all kinds, and to any size or pattern, of the most approved finish. Patterns for castings in all the various forms, made to order, and all manner of finishing to iron work when cast.

Turning in all styles executed with dispatch.

Particular attention paid to heavy castings for Steam Engines, Quartz Machinery, Saw Mill and Flour Mill Castings, Cooking Ranges, Grain Harvesting Machinary, &c.

We particularly invite patrons to call.
v6-19 HINCKLEY, HYDE & CO.

FIRST PREMIUM AGAIN!

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,
SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

v6-14 R. H. VANCE.

EDWARD FELOUSE. JOHN K. RODGERS. DAVID WATSON, JR.

BOSTON TYPE FOUNDRY.

BOSTON TYPE FOUNDRY

THIS Establishment (the oldest in New England, having been commenced in 1817) is now carried on by the subscribers under the style of

JOHN K. RODGERS & CO.,

and the attention of Printers is respectfully asked to their facilities for promptly and satisfactorily meeting the wants of the trade.

Besides their present large variety of
Book, Newspaper and Fancy Types,
Of which they have recently issued a specimen book, they have in hand many NEW AND BEAUTIFUL STYLES of plain and fancy letter, which will shortly be shown in a Supplementary Specimen Book.

Newspapers fitted out promptly, and carefully and particular pains taken with ORDERS FROM CALIFORNIA. v6-12

MARBLE! MARBLE!!

J. W. LADD,
IMPORTER AND DEALER IN
MARBLE,

HAS now in store and for sale, the largest stock of Marble Mantles and Grates; also, Monuments, Head Stones, Imposing Stones, Counter Tops, Restaurant Tables, Soap Stone, and all other articles in his line ever brought to this city, which he will sell lower for Cash than can be bought elsewhere, at
No. 44 Bush street,
opposite the Russette House,

MEDICINES, &c.

J.L. POLHEMUS
DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of
The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.
Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.
Flower of the West, for Fever and Ague.
Delight's Spanish Lustral, for the Hair.
HUDSON'S CALIFORNIA GROWN MUSTARD.

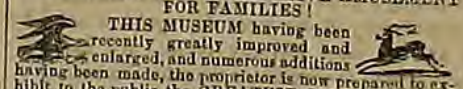
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

PACIFIC MUSEUM,
Corner of Clay and Kearny streets.
INTERESTING AND INSTRUCTIVE AMUSEMENT FOR FAMILIES!



THIS MUSEUM having been recently greatly improved and enlarged, and numerous additions having been made, the proprietor is now prepared to exhibit to the public the GREATEST COLLECTION OF LIVING WILD ANIMALS ever seen on this coast! containing many objects of rare interest to every one. Here may be seen SAMSON, the largest Grizzly Bear ever captured alive, weighing 1,500 pounds. BEN FRANKLIN, an enormous Grizzly, whose attachment to his keeper has twice saved his life. VICTORIA, or the Russian Brown Bear. The Black Hyena Bear. Two Rocky Mountain White Bears. The Red Bear of California. Three Black Cubs, and two Cinnamon Cubs. Making a collection of Bears, which for interest and variety has been rarely, if ever equaled, in any country. Many of these bears are highly trained and are made to perform numerous and surprising feats at the will of their keeper. A great variety of other wild animals, among which are a California Lion and Tiger; a beautiful pair of Elk, Deer, Antelope, two Ant-Eaters, from South America, Prairie Wolf, Foxes, Mountains Cats, Catamount, three varieties of Eagles, &c., &c.

Also, a SEA LEOPARD in a cage, ingeniously contrived to exhibit him in his native element. Here may also be seen the Mammoth Pig, which excited so much wonder at the late State Fair, weighing over 800 pounds.

A large collection of Stuffed Animals, and many other Curiosities of an interesting nature, among which is the fine collection of beautiful Birds, formerly owned by Lola Montes.

☞ A full Brass Band is in attendance every evening. Open every day and evening (Sundays excepted).
. Admission 25 cents during the Day, and 50 cents in the Evening. v7-2

New Agricultural Books.

THE following list of new and valuable works has just been received by us from the East, and the Books can be had at our offices in San Francisco and Sacramento:

v7-3 1m No. 110 Kearny street.

From the East.

The mail steamer Golden Gate, Capt. R. L. Whiting, arrived on Monday morning last, twelve and a half days from Panama, with dates one week later from the East, and from Liverpool, Jan. 21. The Golden Gate brings 647 passengers, all well, with but little sickness on board during the passage and no deaths.

The net amount in the Treasury of the United States, on the 26th January, subject to draft, was $21,496,881 93.

The United States storeship Supply, Commander Porter, arrived at the mouth of the Mississippi, below New Orleans, on the 5th February, from Smyrna, with forty-one camels on board, all of which were brought over without difficulty and in good health.

Lake Superior Silver.—It is stated that a mass of pure solid silver, weighing sixty-five pounds, had just been taken from the Minnesota mine. At the current market value, $1 per ounce, this mass is estimated to be worth $1,040.

A fraud has been perpetrated on the Henderson and Nashville Railroad Company, by their London agent, amounting to $600,000.

From a comparison and careful analysis of the City Inspector's Reports, and from other documentary evidence, it is now ascertained that there were about one thousand deaths from yellow fever in the city of New York during the summer of 1856.

The Navy Department has been officially advised, that, from experiments made on the steamer San Jacinto, the Japanese coal stands in the first class of steam-generating coals, and that, when properly mined from broad veins of sufficient size, it will be found equal to the best coals of America and Europe.

A plan for a bridge across the East River, to connect New York with Brooklyn, has been made by a Mr. Nowlan, an Irish American engineer.

The social festivities of Boston, it is said, were never more brilliant and attractive than they are this winter. There is nothing but a round of gayety in fashionable circles, with round bills of expenditure following to match.

From Europe.—The steamer Baltic, arrived at N. York, 5th ult., with European dates to 27th Jan.

The Neufchatel question will be settled without the intervention of war. France and England have conjointly laid foundation for a satisfactory solution of a difficulty which for a time promised serious impediments to the progress of peace movements in Europe.

The Persian Ambassador arrived in Paris on the 18th January.

M. Gobineau, the French Envoy to Persia, had been solemnly received there, at Teheran.

Verger, the assassin of the Archbishop of Paris, has been sentenced to death.

Lord Napier had arrived in London, from Scotland, and was to leave soon for Washington.

Queen Victoria's accouchement was expected to take place in March.

Redpath, the ex-secretary of the English Northern Railroad Company, who swindled his employers out of nearly a million of dollars, has been convicted, and sentenced to transportation for life.

Returns show that one hundred and fifty vessels were driven ashore, and eighty totally wrecked, with many others damaged, during the late frightful gale on the coasts of the United Kingdom, involving a large loss of life.

Artists' Rooms.

We love to steal away from the hurry of business, and the severe duties of the editorial sanctum, and spend a brief hour in the sanctum of an artist. We spent a very pleasant hour, the past week, in the daguerrean rooms now occupied by Mr. S. P. Howes, late "Ford's," corner Clay and Kearny streets. Our particular attention was drawn to the collection of photographs that have been taken at this place, by those connected with this establishment. This collection is undoubtedly the finest in the country, as it embraces the public buildings, private residences, and familiar features of many of our most distinguished citizens, and all most perfectly taken. We have often suggested to our citizens the value of a beautiful picture of our homes, and these can now be so easily and perfectly, as well as cheaply taken, that we wonder that every one who is identified with a place of business or a home should not have one secured. This gallery can furnish Photographs in the same perfect style as Vance can furnish Ambrotypes.

We also found a beautiful amateur painting of fruit, at the rooms of Mr. Lang, on California street, just above Montgomery. So natural are these fruits that one feels like reaching out his hand to the picture, to take a bunch of the luscious grapes, or one of the rareripes that are so temptingly portrayed. Mr. Lang has the eye of a true artist for a fruitpiece, and we hope to see his work at the coming Fair.

Preparing to Settle in California.—Confident that all who come to California with industrious habits, and are willing to be true Californians, will settle down and establish a Home, it is necessary that when they have built their house that they should furnish it—we ask them to look to our advertising columns. We shall present them, from time to time, such a list of advertisers in every department as will be to them like a *Directory of the best furnishing houses* for families in every branch, and we shall advertise only the best house furniture, crockery, dry goods, groceries, clothing warehouses, each of the main dependencies for family comforts, etc.,—and to these columns we call the especial attention of our readers hereafter.

Messrs. Bryant & Co.—We feel it a pleasure as well as a duty to call the attention of farmers, miners, and all others to the the advertisements of Messrs. Bryant & Co. in our columns. This house is well known as one of the oldest established agricultural houses in San Francisco, and their known reputation makes it secure for any one to send them orders, which will be attended to as well as if they were present. These invoices of merchandise, and especially the seeds, arrived but recently, and are particularly worthy the attention of purchasers.

☞ Newspaper Route for Sale.—We can offer a good Route for the city of San Francisco, and one for Sacramento, to one who has the taste for making known our journal. A very profitable route can be thus secured to active and experienced men

EDUCATION.

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by Cornelius J. Flatt, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17th of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS: PER MONTH

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.

No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.

For further information or references, address the Principal.
C. J. FLATT.
v6-24

Young Ladies' Seminary, Benicia.

MISS MARY ATKINS, : : : : : : : PRINCIPAL.

THE School Year of this Institution is divided into two terms of five months each; but the term commencing January 5, 1857, will close May 1st, 1857, in order that the semi-annual vacations may take place hereafter in May and October.

At the close of each term there will be a thorough examination of the pupils in all of their studies.

The Course of Instruction is such as is usually pursued in High Schools, and also includes the accomplishments of Drawing, Painting, Vocal and Instrumental Music.

The government of the school is gentle, but decided. A daily account of the recitations and deportment of each pupil is sent, monthly, to the parents, who are thus regularly informed of the progress of their daughters.

All of the pupils board either with their parents or at the seminary, and are under the special care of their parents, or of the teachers of the Institution.

The School is open to inspection at any time, and friends are cordially invited to visit it; but no pupils can receive calls from any persons, excepting those introduced by the parents and guardians to the principal.

TERMS: PER MONTH.

Tuition in the Higher English Studies	$ 8 00
" " Common " "	6 00
" " Music and use of Instrument	10 00
" " Ancient and Modern Languages	5 00
" " Drawing and Painting	4 00
For Board (per week)	6 00
For Washing (per session)	23 00

No extra charge will be made for Vocal Music or Embroidery: neither are the pupils required to furnish their rooms, bedding, &c.; but each pupil must have every article of clothing distinctly marked with her name.

Payments are to be made invariably at the beginning and middle of each term, in advance.

FRUIT TREES! FRUIT TREES!!

Oak Grove Nursery, Alameda.

THE subscriber, whose stock consists of the finest varieties of FRUIT TREES, imported from the Nurseries of HOVEY & CO., Boston, and now from one to four years old, many in bearing the present year, consisting of—

Dwarf Pears	20 varieties.
Plum	12 "
Apricot Plum	6 "
Foreign Figs (now in fruit)	7 "

All the best varieties of Apple, Peach, Nectarine, &c.
3,000 Los Angeles Grape Vines, now in fruit, three years old.
Strawberry Plants, &c.

Persons wishing to furnish their grounds will do well to visit the above Nursery and select for themselves, bearing in mind that to insure the healthy growth of a tree, it should be transplanted in the fall.

For particulars inquire of S. L. PALMER & CO., agents, corner of Washington and Davis streets, San Francisco, or to
v6-10 3m GEO. B. COOK, Proprietor.

Shell Mound Nurseries
AND

THIS well known establishment is now prepared to offer to its patrons and the public in general, an extensive and varied assortment of Fruit and Shade Trees, Shrubs, Plants and Vines, comprising almost every article usually found in the Nurseries of the Atlantic States.

Our stock of Apple, Pear, Peach, Plum and Cherry Trees, we believe is of a quality unsurpassed in California.

Catalogues, with prices annexed, will be furnished on application.

All orders, accompanied by remittances, will receive prompt attention.

Please address
R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco;
Or, JASON L. SANFORD, Agent, Brooklyn.

P. S.—We expect to receive in December from 50,000 to 70,000 Trees, Shrubs, Plants and Bulbous Roots, from the East, on the arrival of which a supplementary catalogue will be issued. v6-18 3m

Sale of the Superior Shorthorn Herd
OF THE LATE
NOEL J. BECAR.

To the Editors of the California Farmer:

DEAR SIRS: I wish to communicate through your columns, to the Breeders of Shorthorns, that I have been authorized, by the executors of the late Noel J. Becar, to dispose of his entire herd of far famed Shorthorns. We have also determined not to sell a single animal from that herd until JUNE, 1857, on the day of my annual sale, which generally takes place about the 20th.

Many inquiries have been made by letter, and otherwise, and I take this course to answer previous and future questions. A very full and explanatory Catalogue will be issued in due time, and very generally circulated to all my present correspondents, and as many others as may desire it.

L. G. MORRIS.
Mt. Fordham, Westchester, N. Y., December, 1856. v7-1

THE
"HORTICULTURIST"
AND
Journal of Rural Art and Rural Taste.
Commenced by A. J. DOWNING,
Author of "Landscape Gardening," "Designs for Cottage Residences," "Fruit and Fruit Trees of America," "Country Houses," etc.

Edited by J. JAY SMITH, Editor of the North American Sylva.

THIS popular publication, which is gradually extending its influence throughout the country, and is becoming indispensable to the tasteful Gardener, the Fruit Culturist, and the Floriculturist, will be continued under the editorship of J. Jay Smith, whose ability and taste in matters of country life are highly appreciated through the country.

The cultivation of the beautiful, both in Nature and Art, is justly esteemed an important element in education, and recommends itself to the attention of all who wish to make their dwelling and grounds attractive, and to surround themselves with those luxuries and adornments that spring from the fruitful bosom of the earth when cultivated by the practical hand. The typographical execution of the Horticulturist is designed to be an index to its contents—neat, chaste and elegant. It embraces within its scope—

I. The Description and Cultivation of Fruit and Fruit Trees—a subject of vast importance, and in which we are already more interested than any other people.
II. The Description and Cultivation of Flowers and Flowering Plants and Shrubs, from the most delicate and tender to the most hardy and robust.
III. To the Description and Cultivation of all Edible Plants, which are, or should be, grown in our gardens.
IV. To Gardening as an Art of Taste—with Designs for Ornamental or Landscape Gardening.
V. To Rural Architecture—embracing Designs for Rural Cottages and Villas, Farm Houses, Lodges, Gates, Vineries, Ice Houses, etc., etc.
VI. To Arboriculture—or the Planting and Culture of Forest and Ornamental Trees.
VII. To Botany and Entomology—so far as these branches are connected with the general subjects to which the work is specially devoted.

The extended and valuable correspondence of The Horticulturist presents the experience of the most intelligent cultivators in America; the superior illustrations, and the instructive and agreeable articles from the pens of the editor and contributors, make it eagerly sought after by even the general reader interested in country life. To all persons alive to the improvement of their gardens, orchards, or country-seats—to scientific and practical cultivators of the soil—to nurserymen and commercial gardeners, this Journal, giving the latest discoveries and improvements, experiments and acquisitions in Horticulture and those branches of knowledge connected with it, will be invaluable.

A New Volume (12th year) commences with the January number for 1857; and it will be the constant aim of the editor and publisher, by every means in their power, to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style of the periodical press, each number containing 48 pages, embellished with a frontispiece and several other original and well-executed engravings. At the end of the year it will make a volume of six hundred pages, beautifully illustrated with over 100 engravings, many of them drawings of fruit and flowers from nature. These volumes, if taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature.

TERMS—Two Dollars a year—Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the art—Price, $5.
